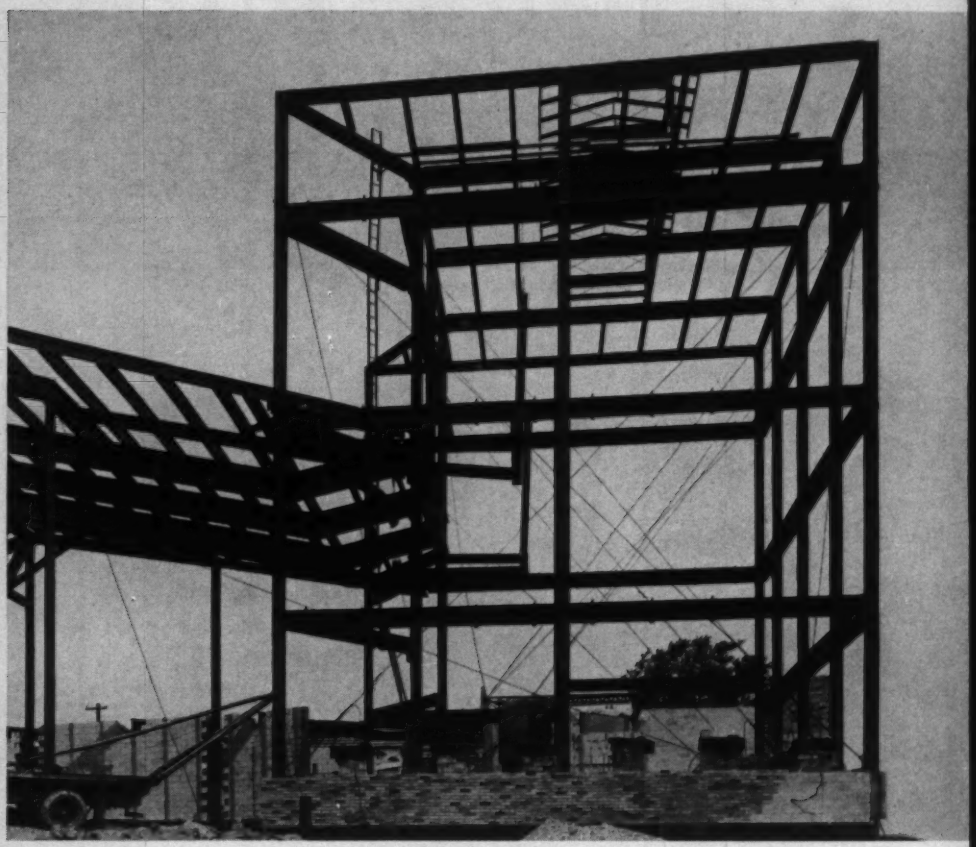
QUALITY STEEL CONSTRUCTION BY PITTSBURGH-DES MOINES



Most anyone can "put up steel" for a badly-needed school—and often does! But the difference between well-fabricated, well-timed, guaranteed PDM steel construction and lesser kinds is the difference between satisfaction and regret for all concerned. With structural steel fabricating plants in Baltimore, Pittsburgh, Des Moines, Clive, Iowa, and Fresno and Santa Clara, Calif., plus skilled field supervision and top craftsmanship in erection, Pittsburgh-Des Moines provides *the right start* for school projects of any size and complexity. For the first dividend of satisfaction on your new-school investment, trust the steel to PDM! *Let us consult with you.*

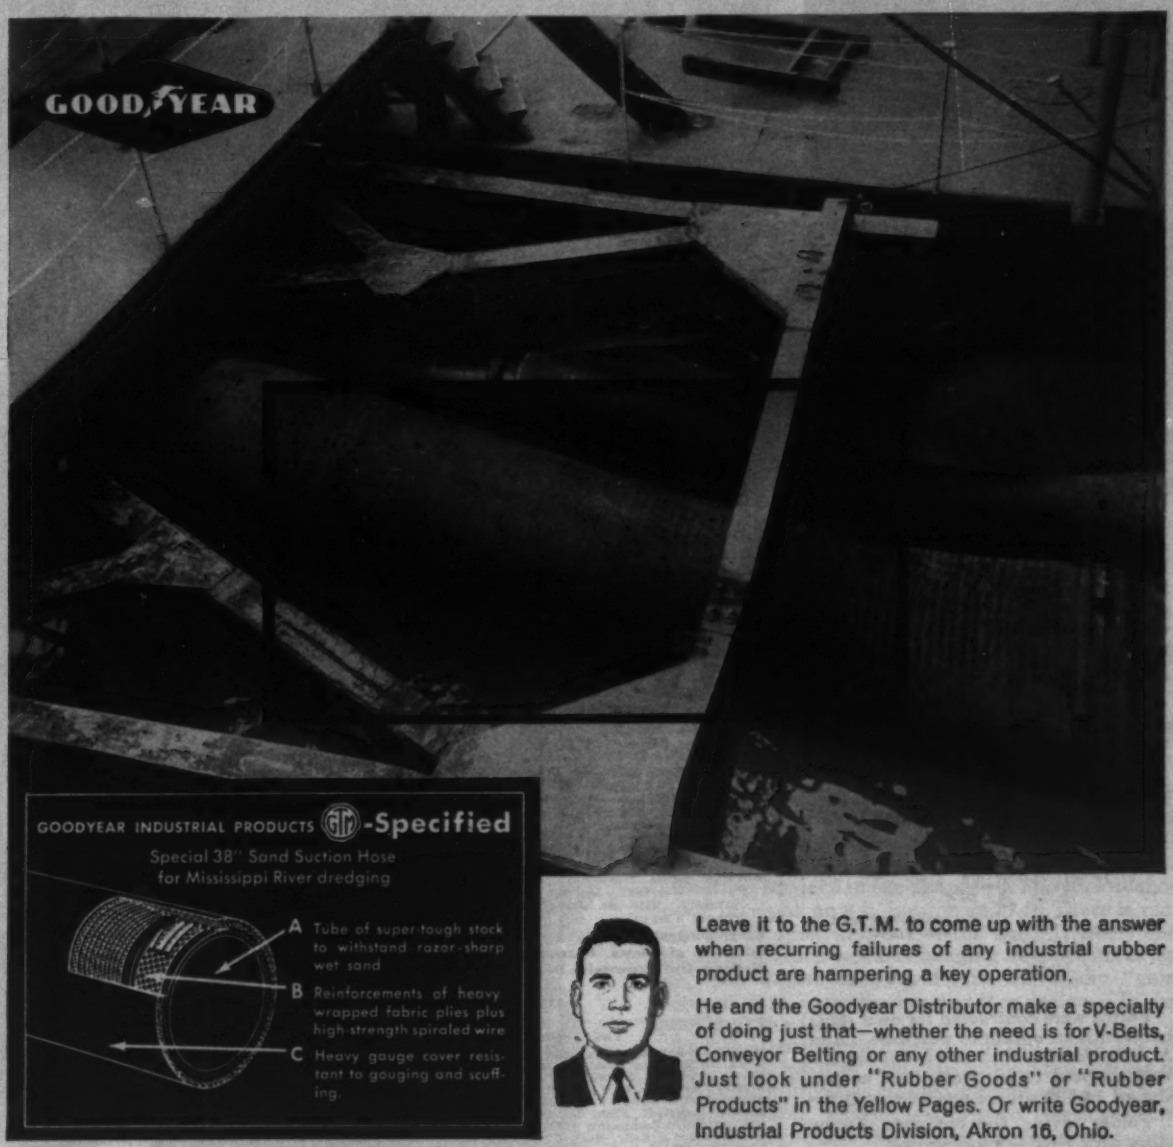
Dredging up 57,481,000 yards of river bottom in 8 seasons— with the hose still in good shape—was the best service these Mississippi River dredge operators had ever gotten. And they got it from special 38-inch Sand Suction Hose recommended by the G.T.M.—Goodyear Technical Man. This long, trouble-free operation was a real time- and money-saver, too. For every replacement of the hose-link between the dredge ladder and the suction line takes a full crew's efforts for 3 days. More important, the dredge is out of action all that time. So it's easy to see why this dredge operator has stayed with the G.T.M.'s longer-lasting hose.



GOODYEAR
GOODYEAR INDUSTRIAL PRODUCTS GTM-Specified
Special 38" Sand Suction Hose
for Mississippi River dredging
A Tube of super-tough stock to withstand razor-sharp wet sand
B Reinforcements of heavy wrapped fabric plies plus high-strength spiraled wire
C Heavy gauge cover resistant to gouging and scuffing

Leave it to the G.T.M. to come up with the answer when recurring failures of any industrial rubber product are hampering a key operation.

He and the Goodyear Distributor make a specialty of doing just that—whether the need is for V-Belts, Conveyor Belting or any other industrial product. Just look under "Rubber Goods" or "Rubber Products" in the Yellow Pages. Or write Goodyear, Industrial Products Division, Akron 16, Ohio.

lots of good things come from

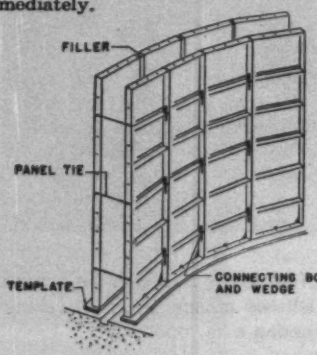
16 Working Days

Experienced Men and Symons Forms

. . . Pour Sewage Treatment Plant in Record Time

One of the speediest sewage treatment plant projects ever undertaken in the Southwest was completed in 16 working days near Phoenix, Arizona. Capacity of plant is rated at 5 mgd. It has a 700,000 gallon digester.

F. H. Antrim Construction Company used 15,500 square feet of Symons Steel-Ply panels. An important factor in selecting Symons Forms was that they could be erected on one side of the circular tanks without installing ties immediately.



Forms were contracted for on a rental basis with an option to purchase. Later, Antrim decided that the forms were so well adapted to his work that he purchased 14,000 square feet of the panels.

Folder giving the complete Antrim story sent FREE upon request.

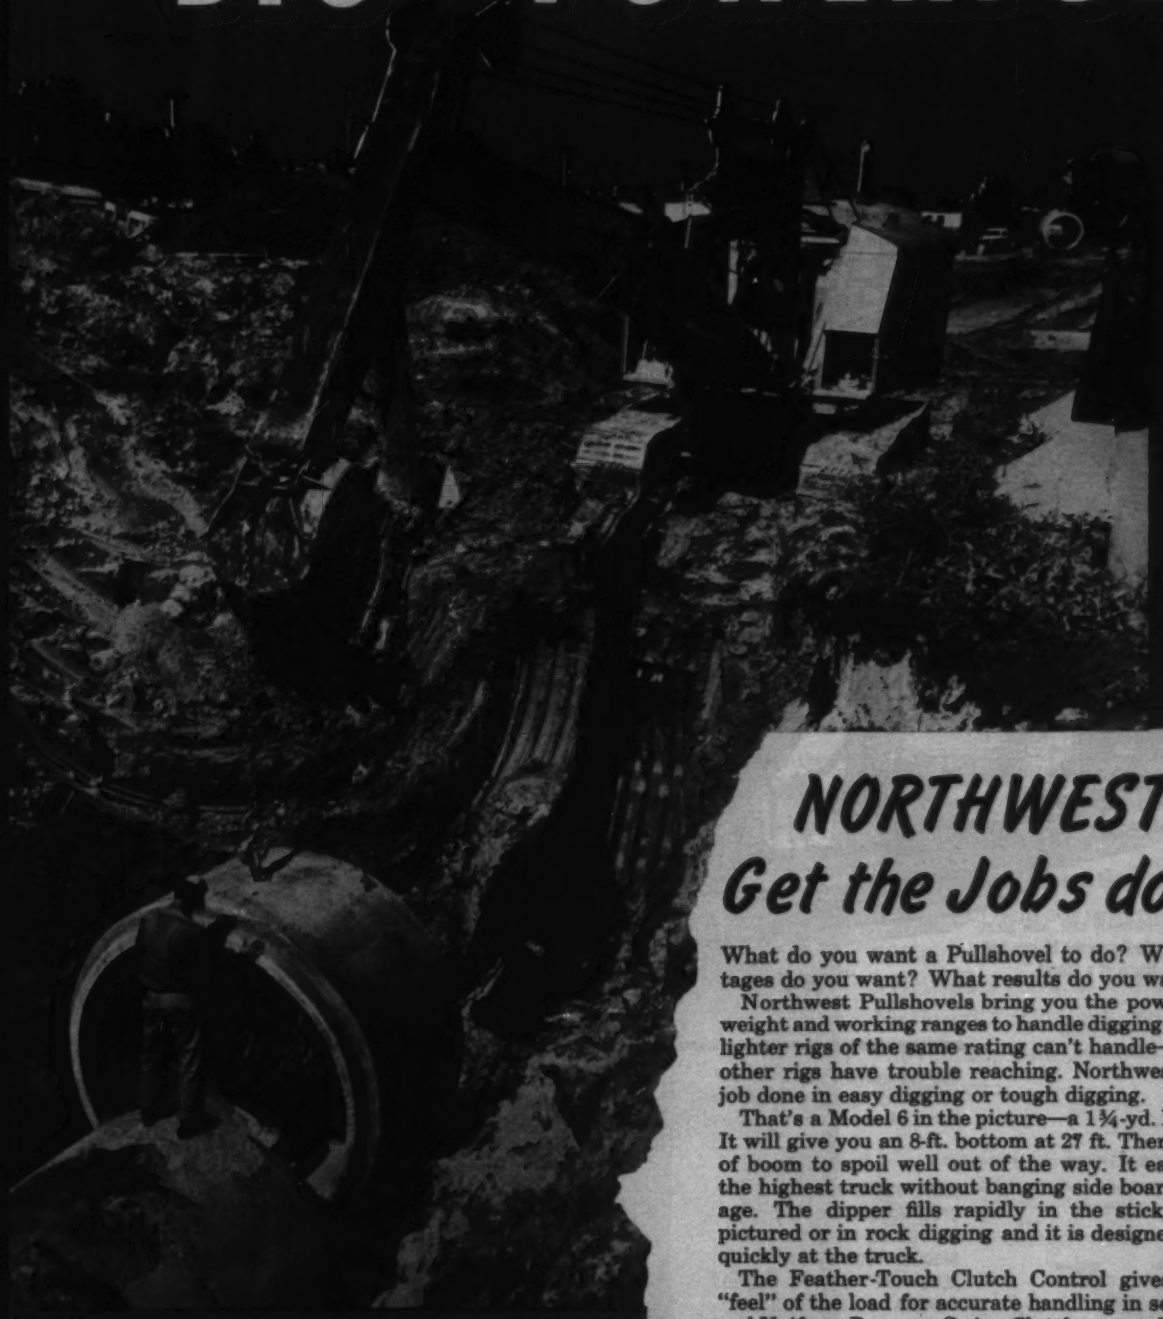
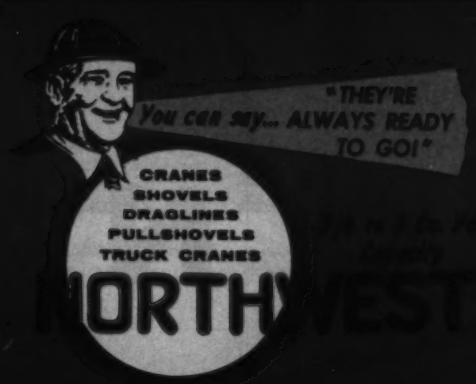
BIG··POWERFUL





NORTHWESTS Get the Jobs done!

What do you want a Pullshovel to do? What advantages do you want? What results do you want?

Northwest Pullshovels bring you the power and the weight and working ranges to handle digging that other, lighter rigs of the same rating can't handle—at depths other rigs have trouble reaching. Northwests get the job done in easy digging or tough digging.

That's a Model 6 in the picture—a 1¾-yd. Pullshovel. It will give you an 8-ft. bottom at 27 ft. There is plenty of boom to spoil well out of the way. It easily clears the highest truck without banging side boards or spillage. The dipper fills rapidly in the sticky "going" pictured or in rock digging and it is designed to dump quickly at the truck.

The Feather-Touch Clutch Control gives the true "feel" of the load for accurate handling in setting pipe and Uniform Pressure Swing Clutches run all day, cool and dependable, without jerk or grab. Northwest steering easily negotiates the mucky going so often characteristic of sewer work and has been proved in countless miles of all kinds of travel. These features are typical of all Northwest Pullshovels from the ¾-yd. 25-D to the Model 95.

These things combine to get the job done faster and more profitably. They are the things that make it possible for you to say, "That Northwest is always ready to go." They are the features that make the Northwest the finest machine of its kind.

Details make the machine. It will pay you to dig them out. Ask a Northwest man!

MAHON

Longer, stronger AMVIT Jointed Clay Pipe will never fail when the heat is on

Hot water from washing machines and dishwashers softens substitute pipe, flattening it out of shape

The photograph on the right shows a section of substitute non-clay pipe which had to be replaced after only 14 months of service.

Hot water from automatic washing machines and dishwashers softened this pipe so that the heavy earth above the pipe simply flattened it out of round.

Grease and scum tend to build up on the interior of the pipe and act as a solvent on certain synthetic substitute pipes.

Today, after facing the severe test of time and service, many of these non-clay materials are breaking down, costing taxpayers thousands of dollars for replacements.

Amvit Jointed Clay Pipe simply cannot be destroyed by sewer service. Like the pipe, the plastic joint is acid resistant. The design of the joint assures that the pipe is self-centered at all times. This gives perfect alignment and self-cleansing action.

This is an actual photograph of a substitute pipe failure.

Because the joint is really tight, no foreign matter such as dirt, stones and roots can possibly enter the line.

For more information on how Amvit can help cut sewer project costs, write or call American Vitrified Products Company, National City Bank Building, Cleveland, Ohio, or our office nearest you.

NEW CP-124 DEMO has body-contoured backhead for easier handling. Beefed up muscle for prying power. Gooseneck swivel lets operator use tool in any position without hose interference. Short length gives better balance...easier handling. Shock-proof steel retainer. Four-bolt backhead.

NEW CP-124 DEMO makes a POINT of POWER

Specify a CP Demo Tool and you're ready to lick ANY JOB . . . ANY TIME . . . ANYWHERE

You name the job, and the "124" will give you the fastest, easiest action you've ever handled. It's an 80-pound class Demo, yes... but it packs more shattering punch per pound than any other demo on the market. It's so perfectly balanced, so soundly designed your men will handle it with the jarless ease of a lightweight tool.

It rides easy, but it hits hard! Unmatched for balance and solid reliability. Try out the CP-124, and you'll have to agree with us: it's the best heavy-duty demo you can get.

Get complete information on the New CP-124 Demolition Tool, write to your CP equipment distributor. Ask for a copy of SP-3260. *Chicago Pneumatic Tool Company, 8 East 44th Street, New York 17, N. Y.*

These Service-Proved CP Demos are an industry standard.

CP-115 makes horizontal breaking easy.

CP-117 puts profit in paving breaking.

Lightweight CP-113 hits hard, handles safely.

Versatile PAYLOADER® expands

your working range and capacity

A "PAYLOADER" tractor-shovel is the most usable machine a contractor can own. It combines rubber-tired traction and mobility with the workability of a complete assortment of attachments to provide versatility you've never experienced before. For example:

THE PATENTED DROTT 4-IN-ONE bucket (above) gives you 4-machine utility for one moderate cost. This hydraulically controlled split bucket combines shovel, clamshell, scraper and dozer action in a single tool. It saves time and labor by doing the work of several specialized machines with one operator and one machine.

EVERY 4-WHEEL DRIVE "PAYLOADER" gives more machine for your money. It travels to the job fast, under its own power... walks and works over sidewalks and curbs without damage... handles many scattered jobs in a single day. Mechanically, every "PAYLOADER" incorporates many proven Hough features for fast, easy operation that gets jobs done ahead of schedule. Judge for yourself how all the advantages of "PAYLOADER" versatility can be applied to your operations. A nearby Hough Distributor can supply complete details, or return the coupon.

OTHER USEFUL ATTACHMENTS include lift fork (shown), back hoe, black-top spreader, crane hook, side boom and backfill blade for even more "PAYLOADER" usefulness.

Model State Code

SIR—As a longtime reader, I have often had reason to applaud your editorials. The issue of June 16 contains one, "Work for Better Codes," with the essence of which I am in hearty agreement, especially since I believe that we architects in New York have done something notably constructive in that field of endeavor. For years we have advocated and done our part in bringing into being a performance-type building code that can be applied uniformly over the whole state. The New York State Building Construction Code, completed in 1958, is the result of the effective collaboration of all interested parties.

Your editorial speaks for "those adventuresome designers who would like to try the new in the hope of producing better and less costly structures." It is specifically for those and for that hope that the state code has been prepared. It suggests, invites, encourages and stimulates imagination, invention and innovation. The difficulty of getting variances and amendments has been obviated.

The state code is a statement of performance criteria intended to assure safety, with minimum restraint upon creative ability. New things are not kept out of the code, because the application of its performance criteria is universal and permanent, covering all hazards in the use of buildings that have thus far been experienced or anticipated. And, if new hazards should be experienced, there is a ready, rapid and costless way of amending or adding to the performance requirements. Changes in the code do not require legislative action.

I am also in sympathy with your reference to "a manual listing accepted materials and methods" as having a "deterrent effect on the introduction of new materials and methods." In creating the state code, we recognized and wrestled with this problem, successfully, I believe. After we distilled the performance criteria into the code, we prepared an accompanying manual to do two things: (1) to explain graphically the intent of the code language and (2) to illustrate some unusual methods of designing and constructing that meet the performance criteria of the code—while continually stressing

(Continued on p. 16)

28 miles at sea-

RAYKAY 1

Code name for a Raymond joint venture, Raykay 1 is the unique deep-water oil loading depot now being built 28 miles offshore in the Persian Gulf. It is scheduled for completion about March 1961, and is designed to speed Iraq's oil exports by eliminating congestion at the port.

A $15,000,000 project

This great terminal literally took off eight months ago, when it floated out from England behind a towline that would eventually carry it 7,000 miles to its final berth.

Twelve hundred feet long and complete with heliport and air conditioned crew quarters, Raykay 1 will be linked to Fao, its source of supply, by two 32-inch submarine pipelines. Two 65,000-ton tankers at a time will be able to load without having to navigate the shallow waters of the river leading to the present port. And the creative engineering of Raymond International is helping to make this possible.

Whatever your offshore problems, no matter how deep or distant, take advantage of Raymond's experience in many seas, in many parts of the world. We have the knowledge and the equipment, and we'd like to help. Write or call any of Raymond's offices throughout the world.

CUMMINS C&J DIESELS 70 TO 180 HP

General Building Contractors, County and Municipal Superintendents, Construction and Mining Operators now can have Cummins C&J Diesel *dependability and economy* in a wide variety of medium capacity earthmoving equipment. This means it's easy to standardize on Cummins in graders, front-end loaders, on-highway dump trucks and the many other construction machines requiring from 70 to 180 horsepower.

Fifteen C&J engines are available—nine J models, six C models. This provides a wide range of horsepower in 4 and 6 cylinder block—naturally-aspirated, supercharged and turbocharged designs.

Also, Cummins C&J Construction Diesels have specialized improvements for earthmoving applications. Your engine will be equipped with a composite dry-type air cleaner, special by-pass oil filter, "bottle-stopper" type dipstick and oil filler cap, and, on supercharged and turbocharged models, a special pressurized crankcase. Only Cummins offers all of these features to minimize the entry of dirt into the engine. Positive lubrication and fuel delivery are assured in high angular operations through the use of a multi-lube pump and special oil pan.

Further, C&J engines now come supplied with Cummins new improved PT fuel system. This system, plus Cummins open-combustion chamber design and four-cycle operating principle, enables you to save as much as 25%—30% in fuel costs over engines of other designs.

More than 500 Cummins Service points are located across the United States and Canada where you can always obtain parts and service. As an added benefit, Cummins Distributors also provide job-site help through regular calls of mobile service trucks.

For more information on the efficiency and low-operating cost of Cummins C&J Diesels, see your nearest construction equipment representative or Cummins Distributor.

Somewhere North of Baffin Bay

The Arctic is almost as silent and lifeless as an ice-cube. But, deep inside it, these 400-foot long missile-detection antennas will guard the life of our country.

This mark tells you a product is made of modern, dependable Steel.

They're part of a Ballistic Missile Early Warning System (BMEWS). Officially, you'd call them surveillance radar antennas. Yet, they look like over-sized baseball mitts. That web-like framework can detect (or spot) a far-off missile darting through the shivering Arctic sky, and rifle its speed and direction to any of our military bases in seconds.

Up here, weather is a constant battle. Arctic storms slam into the 163-foot high antennas, and rake icy fingers back and forth over the mesh-faced structures. But they'll stand for years. The D. S. Kennedy Com-

pany, builders, made certain of that by weaving foot after foot of USS National Seamless Carbon and Nickel Alloy Tubing into every antenna.

For over 90 years, USS National Pipe and Tubes have been used for demanding tubular installations in the fields of line pipe, pressure tubing, mechanical tubing, structural pipe and oil country tubular products. Would you like to benefit from our experience? Write National Tube Division, United States Steel, 525 William Penn Place, Pittsburgh 30, Pennsylvania.

. . . Reader Comment

the point that any other method may be used or invented if it meets the requirements of the code.

We then set up a procedure for evaluating such other methods and certifying to their acceptability. Already 150 "certificates of acceptability" of just such new methods and materials and combinations have been granted by the code agency. These certificates are distributed to all building officials using the code.

I agree that "many building departments today are understaffed and lack adequately trained personnel." Acceptance of the state code places the resources and facilities of the Code Bureau at the service of the local building department without cost. There are field men who respond to requests for visits. Telephone calls and letters to the bureau receive prompt and effective response. Major assistance has been rendered in more than 50 instances in the past year, ranging from a vast office and research building of a wholly new kind to a novel roof truss for a residence.

The state code has been widely accepted, although its use is entirely voluntary. It is now in force in 334 municipalities of the state and is available without charge to the rest of the people of New York. I believe it is the answer to your editorial in this state.

GEORGE BAIN CUMMINGS
Binghamton, N. Y.

Editor's Note: Mr. Cummings has recently been appointed code consultant to the Division of Housing of the State of New York. He also served as vice chairman of the New York State Building Code Commission from its inception in 1949 until it was abolished in 1959, when responsibility for the code was transferred to the Division of Housing.

Wasteful Estimating

SIR—A loud amen anent Mr. Szmak's comment on quantity surveys (ENR June 23, p. 25). I've often wondered why your editors haven't given more thought and space to the outmoded and almost criminal waste connected with the preparation of estimates for bidding purposes in this country.

A typical example of such waste in estimating was demonstrated on a sizeable project bid here in Los Angeles. The writer spent several months after the opening checking with the generals and subcontractors as to their individual cost in estimating this job. I personally was not surprised when the total figure came to slightly less than $500,000. Multiply this sum by similar projects being bid in this country every day and it approaches a sum that staggers the imagination. Who absorbs this tremendous waste—the contractors or the client?

JIM PRIEST
Estimators Ltd., Inc.

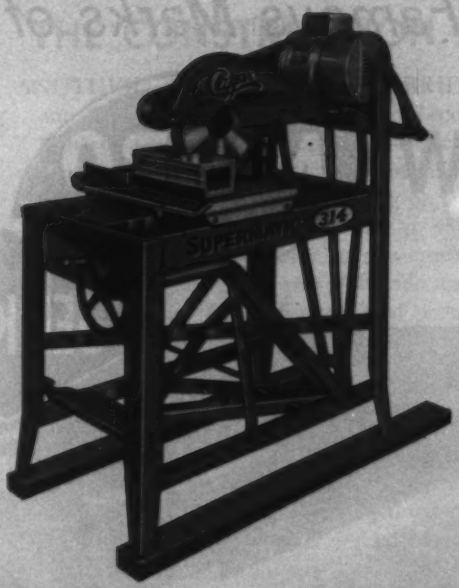
Clipper

SuperMatic 314



can save you

32.7%

on blade costs alone

The proper speed for a 20" blade is not the proper speed for a 14" blade. Clipper 14" Supermatic 314 Hi-Speed Masonry Saw gives you 32.7% longer blade life using a 14" blade, than you get when you use the same blade on a universal 14"-20" saw. Independent laboratory tests verify these figures.

On a Supermatic 14", an operator can line up his cuts much faster than he can with a 20" saw without sacrificing cutting speed.

True, certain jobs call for capacity beyond 14" . . . for instance, a large block job where it is important to be able to cut in a single pass. For these jobs, Clipper offers you its famous Supermatic 300. But, **don't be misled!** If a 14" saw meets your requirements, and it meets the requirements of most saw owners, you can get 32.7% longer life out of your blades by choosing a Hi-Speed Clipper SM 314.

Only Clipper Offers You This Choice! That's why only Clipper can offer you the right saw no matter what your cutting requirements are. Buy from Clipper, the world's recognized leader in masonry and concrete cutting equipment. Call Collect Today For Free Trial On Your Job.

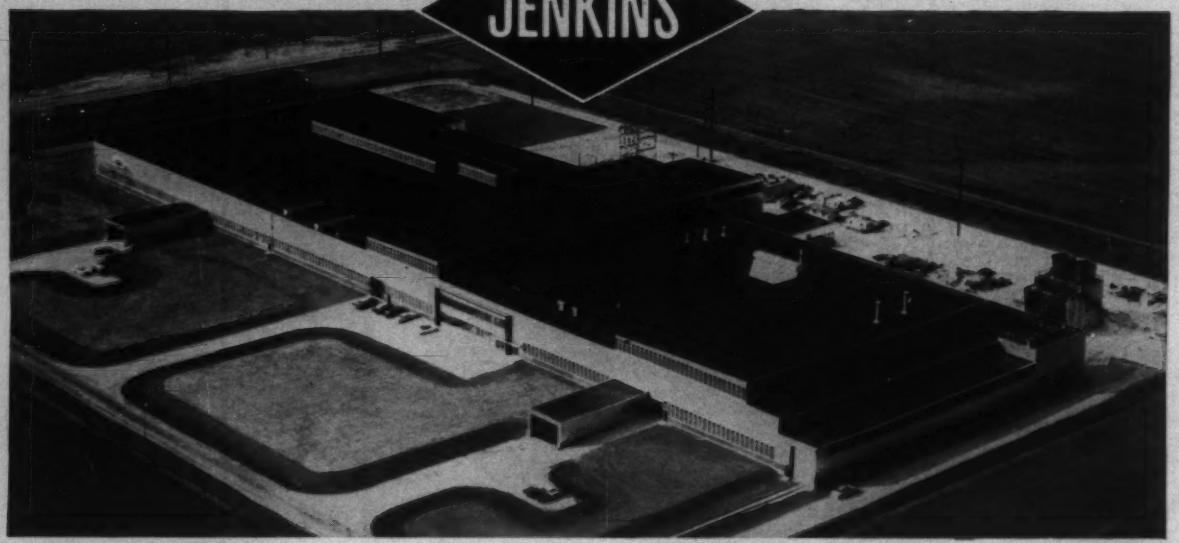
Two Famous Marks of Quality Get Together

NEW MIRRO ALUMINUM ROLLING MILL

JENKINS



Consulting Engineers and Contractors: Klug & Smith Co., Milwaukee, Wis. • **Mechanical Contractor:** Paul S. Grunau Company, Milwaukee, Wis.

To control its 15 miles of piping Mirro chose JENKINS VALVES

With a trademark that promises the finest aluminum products, Mirro Aluminum Co. wanted the most trusted trademark in the valve world as an assurance of reliability for the complex piping system in its new $12,000,000 rolling mill in Manitowoc, Wisconsin.

There are over 15 miles of piping in this huge new mill that can produce 60,000,000 pounds of aluminum foil and sheets a year. But there will be no valve problems . . . no avoidable valve maintenance and replacement expense on these lines. Mirro made sure of that by installing Jenkins Valves throughout the system.

There's no point in gambling with valve problems when you can have the known reliability and trouble-saving quality of Jenkins Valves, without paying extra for the protection. Jenkins Bros., 100 Park Avenue, New York 17.

THE CONSTRUCTION WEEK

ANOTHER PONTCHARTRAIN BRIDGE—Brown and Root Co. Inc., of Houston, is becoming something of a specialist in precast, prestressed bridges. It constructed the 24-mile bridge across Lake Pontchartrain in Louisiana. It's now working on a similar span over Pensacola Bay in Florida (see p. 45) and it has just bid low on a new Pontchartrain crossing, this one a twin bridge affair with two 40-ft-wide roadways, each five miles long. The 866 prestressed precast elements will also be made at the firm's yard at Mandeville, La.

EQUIPMENT PRODUCTION SLOWS—Equipment manufacturers are chopping their second half production schedules to half the rate of the first half, reports the Business and Defense Services Administration. Heavy disposals of federally owned equipment have compounded the problems of dealers, who are wrestling with a pile-up of inventory.

POST TIME FOR ALUMINUM—Two million pounds of aluminum will go into 35 miles of guard rails and posts on two New York expressways. It's the first use of aluminum in guard posts and one of the most extensive uses of this material in guard rails.

WILL IT HELP?—The decision by the Federal Housing Administration to permit individuals to purchase FHA-insured mortgages may bring more lenders, but not necessarily more money. The funds small private investors apply to mortgages will come largely from their deposits in banks and savings and loan associations, thus reducing the capital pool used for mortgage loan funds ordinarily.

TEST SHOT FAILS TO BLOW—Nothing happened when Atomic Energy Commission scientists pushed the plunger to detonate 500 tons of high explosives last week at Yucca Flats, Nev. Buried 125 ft underground, the non-nuclear charge was supposed to furnish information on cratering effects of explosives as part of the AEC's Project Plowshare for development of peaceful uses of atomic energy. The AEC will try again after it finds out why the shot failed.

BEST VIEW YET—The world's largest solar telescope will go under construction before the summer's end near Tucson, Ariz. It will consist of three large reflecting surfaces supported on a structure as big as a 10-story office building. The National Science Foundation has granted $4 million toward the cost.

FOR TRADITION'S SAKE?—A new seven-story, $660,000 office building in London may be demolished before the first stenographer has her first tea break. Authorities want to erect a garage on the site, which had been a parking lot for 25 years before the intrusion of commerce.

Project: Little Rock Sewage Treatment Plant, Little Rock, Ark.
Contractor: Forcum-Lannom Inc., Dyersburg, Tenn.
Engineers: Burns & McDonnell, Kansas City, Mo.

Control 30 ft of ground water in coarse sand as wellpoints . . .

Keep Deep Cut Dry Close to Rising River

In pervious sand near the Arkansas River, Forcum-Lannom required a deep excavation going down 30 ft below groundwater table. Prior experience had indicated the area to be a difficult one for dewatering by the wellpoint method. A high pumping head, long discharge lines and a rising river level were among the problems.

• Photo shows what happened. The contractor had clear sailing as a 2-stage wellpoint system designed by Griffin engineers kept the excavation safe and dry. The lower-stage pumps pushed the water vertically a distance of 45 ft and then through 600 ft of discharge pipe to the river.

• Ground water was held below subgrade through 7 months of continuous pumping, with river level fluctuating 10 ft.

WASHINGTON OBSERVER

- **Where the candidates stand**
- **Early start on '61 public works**
- **Big housing bill not likely**

● **Sen. John F. Kennedy, the easterner, has about as solid a record on public works spending as Sen. Lyndon B. Johnson, the southwesterner.** They've both been for such things as the high Hells Canyon Dam, cheap money REA, new reclamation and hydro projects for basin development, and the like.

Both Democratic candidates are in a position to attack President Eisenhower's policies on public works, on vetoing aid-to-depressed areas, on tight money and on housing. They're both for more federal stimulation and spending to boost the rate of economic expansion.

Vice President Nixon as the Republican nominee can't be all things to all men so easily as the Democrats can. If he's nominated—as seems almost certain—he still has to stand on Mr. Eisenhower's record, while arguing that he will do some things differently. Mr. Nixon already has come out against what he calls "growthmanship"—that is, against force-feeding economic expansion to keep up with the Soviet rate of growth.

—

● **Watch for the Republicans to do everything they can to spend or commit construction and public works funds this fall**—and the sooner the better.

The idea is: If the money is to be spent or the contract let in fiscal year 1961, let's do it now instead of later. The reason: to help the GOP cause in November in every possible way. There won't be any written orders to this effect from the White House, but the word gets around just the same. Results show up in highways, housing, flood control, federal buildings.

It will show up most sharply in Pentagon spending figures: Every Presidential election year, contracts are let that normally would be bogged down for months in the chain of command.

—

● **Brightening prospects for housing starts the rest of the year may dampen chances for a big shot-in-the-arm housing bill** out of the August session of Congress. The pre-convention-Congress was unable to pass a housing law because of a House-Senate split: The House members wanting to give the housing market another jolt of government aid, while senators favor a continuation of existing programs. Odds now favor the Senate's position.

Experts at the National Association of Home Builders predict a second-half pickup but probably not enough to offset the laggard first half. FHA reports that mortgage insurance applications turned up more than seasonally in June. VA reports that new home appraisal requests also took a more-than-normal jump in June.

Aid for housing for the elderly is available now. The President has signed legislation allocating $20 million for federal assistance voted by Congress in 1959.

Here's how the program will work:

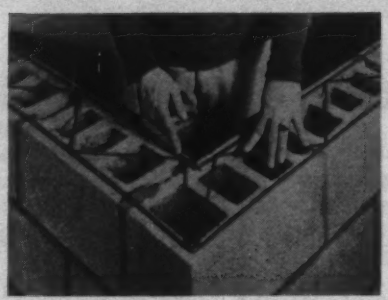
FHA mortgages may be bought by individuals from certified lending institutions that originate loans. The institutions will service the loans for a fixed fee, and collect in monthly payments.

it takes Dur-o-wal to keep them alike!

Two masonry walls: They can be twins in surface charm and solidity. Yet, one can be the better building investment—free of maintenance problems for important extra years. That's the one built with Dur-o-wal, the original steel masonry wall reinforcement.

A wall reinforced every second course with Standard Weight Dur-o-wal has 71 per cent greater flexural strength than its unreinforced counterpart.

With its trussed design, butt-welded construction, scientifically deformed rods, Dur-o-wal is considered the most practical thing of its kind by builders everywhere. Nationally wanted, Dur-o-wal is nationally distributed. Wherever you build a masonry wall, you can get Dur-o-wal.



Two engineered products that meet a need. Dur-o-wal reinforcement, shown above, and Rapid Control Joint, below. Weatherproof neoprene flanges on the latter flex with the joint, simplify the caulking problem.

U.S. Steps Into Base Disputes

The months-long feuding over jurisdictional problems in the construction of missile bases may be headed for a government settlement. For months now, the construction contractors and the building trades unions have been opposing the missile makers and the industrial unions over who is to get gray-area contracts and which unions are to perform the work.

The disputed contracts include work claimed by electricians, plumbers, pipefitters, boiler-makers, and lathers.

The Labor Department is now working on a draft of a Bacon-Davis regulation that would attempt to specify which of the disputed jobs are construction work covered by the prevailing wage laws. The department has the authority to do this as part of its responsibility for seeing that prevailing wage rates are paid on federal construction contracts; the department has similar authority for non-construction contracts under the Walsh-Healey law.

The Labor Department's final disposition of Davis-Bacon application to missile base work will, of course, have no legal effect on work assignments because the law is concerned with wages only. It is not concerned with the question of who performs what work.

But to the extent the department classifies such work as construction work, it will tend to strengthen the construction industry's claim.

It will reduce the competitive advantage missile manufacturers have by requiring them to pay the higher rates traditional in the construction industry. It will serve to identify such work with the construction industry. It will protect the wage rates of construction workers. And it will tend to protect the interests of the building trades in their jurisdictional conflict with industrial unions.

A draft sent out for comment pleases the missile makers; but it's unsatisfactory to contractors and the construction trades. It would allow much of the disputed work to go to the missile manufacturers at their regular rates, on the theory that it is not construction work.

Labor Department officials aren't saying how soon the final word will be handed down, but they appear to be in no hurry.

Contractor representatives met with Air Force officials early last week on the jurisdictional problem only an hour or so after Secretary of Defense Thomas Gates had blasted Air Force and Corps of Engineer brass for allowing missile base construction to fall behind the readiness of the missiles themselves.

Jurisdictional strikes have set back Atlas bases.

Air Force Brig. Gen. Harold K. Kelley, deputy director for construction of the Air Force's Directorate of Civil Engineering, met with Don Buzzell, Welton Snow and Jack Bowersox of the Associated General Contractors and George Roscoe of the Council of Mechanical Specialty Contractors to see what should be done to settle the jurisdictional problem.

The contractors told General Kelley that the trouble lies in Air Force procurement policies on missile contracts. Air Force prime contracts give the missile maker over-all responsibility not only for the weapon and all its ground support equipment but also for installation of many structural and mechanical components of the missile base.

This squeezes out the construction contractors and the building trades. The prime contractor takes over much of the construction on the base and performs it with the same unions that work in the manufacturing plants.

Construction unions resent this encroachment on their territory. Picketing and work stoppages resulting from the jurisdictional conflict, as at the Warren AFB missile sites in Wyoming, have contributed to the setbacks in construction schedules.

The construction trades have carried their case to the Labor Department, which has responsibility for determining and enforcing prevailing wage rates on federal construction jobs worth $2,000 or more as stipulated by the Davis-Bacon Act. To clarify the issue, Labor Department lawyers began preparing the regulation to define what is construction work and what is not on missile bases.

By last weekend, 19 organizations had submitted their comments on the proposed regulation—including the contractor associations representing the

construction and missile makers, the AFL-CIO Building and Construction Trades Department, the auto workers and the machinists.

Labor Department began its effort to define and protect the province of the construction crafts on Air Force missile bases last December after an official observed missile-maker crews performing construction work, such as structural steel erection, on bases in California and Colorado. He called the infringements to the attention of the Air Force, and the service heads asked the Labor Department to draw up criteria that would enable the Air Force to separate work belonging to the construction trades, covered by Davis-Bacon, from on-site jobs that could be performed legitimately by employees of the missile manufacturer. Wages for the latter types of jobs are determined under the Walsh-Healey Act governing supply contracts.

In response to the Air Force request, labor officials worked up the tentative proposal dated May 18.

The tentative rule plainly points out that any construction item estimated to cost more than $2,000 requires Davis-Bacon wage determination and enforcement. Excluded in the draft from Davis-Bacon coverage are "all individual work items the estimated cost of which is $2,000 or less."

Construction spokesmen contend that this distinction, though clearly correct under the Davis-Bacon law, permits missile makers to break down multi-million-dollar contracts into work items of $2,000 or less for performance by their own forces.

These spokesmen don't attach much weight to language in the same paragraph that apparently bars such a split-up of on-site construction into small work items. After declaring, "The fact that the total amount of a supply contract exceeds $2,000 does not of itself require that individual work items of a construction type under the contract (not exceeding $2,000 in amount) are covered by the (Davis-Bacon) Act," the draft immediately warns, "However, no such item of work, the cost of which is estimated to be in excess of $2,000, shall be artificially divided into portions of less than $2,000, for the purpose of avoiding the application of the act."

Basically, the draft states, "The Department of Labor has found that a missile base, together with its permanently installed equipment, is a public work within the meaning of the Davis-Bacon Act and that construction of the base and installation of such equipment is regarded as 'construction alteration and repair'.

"Once installed, however," the draft continues, "the technical checking, operation, routine maintenance and repair and internal modification of the equipment or machinery in the building or structure is deemed operational activity and not subject to the Davis-Bacon Act, except to the extent that such work requires substantial modifications affecting the structure or installed utilities."

For the missile maker, the draft acknowledges that "much of the work at missile sites is novel, and there are no existing trade practices concerning it." Also, the proposal concedes that completion of a missile base is unique in another sense, because machinery and equipment may still be in the developmental or experimental stage during assembly and installation on the site. This kind of work has no definite "specifications," and it may require scientists, engineers and technicians rather than the "laborers and mechanics" named in the Davis-Bacon Act.

Contractors performing this kind of installation, the draft says, "are primarily manufacturers or producers. Their contracts are of the supply type."

Thorny problems arise from the more specific criteria in the draft that attempts to segregate jobs at the site into two categories: work subject to Davis-Bacon and work not covered by the act. The mechanical trades are particularly affected by the item-by-item definitions. Electrical construction gives a good illustration.

Electrical contractors and the International Brotherhood of Electrical Workers employed on their jobs mention console terminations, for example, as one point inviting conflict under the criteria. The draft would assign to construction electrical workers the fabrication and installation of cables from the primary power junction box to racks and consoles, along with inter-rack and inter-console connections, including tubing, conduit and wiring.

Construction people contend that the allocated items shut out their electricians from work involving a great many man-hours of skilled labor.

Electrical contractors argued that the interpretations presented in the draft with regard to wiring-in of electronic control and signal equipment likewise make an unrealistic application of Davis-Bacon requirements. Over-all, electrical contractors feel that the Labor Department draft is attempting by indirection to nullify the application of Davis-Bacon to construction work on missile bases.

General construction contractors in the AGC are not so pessimistic about the Labor Department's final interpretations. They have some confidence that the final, effective version of the criteria will go a good way toward clarifying the murky question of what work should go to construction crews, and what to missile makers.

...Jockeying Over

The first four full-scale Atlas ICBM sites—at Warren, Offutt, Fairchild and Forbes Air Force bases—will be combat-ready later this year and early in 1961, from three to six months behind initial schedules.

Output of the 80-ft missiles is on schedule. But construction of necessary launch facilities and installation of ground support and checkout equipment has been delayed.

Defense Secretary Gates officially acknowledged the delays last week and ordered the Air Force and Army Engineers to propose steps to speed work on the projects. The proposals are due on Mr. Gates' desk this week (see page 23).

Several "corrective" steps are in the works to push construction work faster on the bases now behind schedule and to prevent delays on the other installations under construction. So far, construction work on the six other Atlas bases and the five Titan bases now being built (see chart) is running on or slightly ahead of schedule.

This is what the Pentagon is considering:

The Air Force wants to set up at each missile site a single "construction czar" who could make binding decisions on local jurisdictional labor disputes and other sticky issues.

At present decisions at each base must be coordinated through representatives of five separate authorities—the Air Force's Ballistic Missile Division, responsible for design and development of the weapon system; the Air Force's Ballistic Missile Center, an arm of the Air Materiel Command, responsible for production of the equipment; the Army Corps of Engineers; the prime missile contractors, whose employees work under a different set of wage rates than do the building trades union members; and the Strategic Air Command, which will operate the base when completed.

The Air Force reportedly recommends that the SAC base commander act as the "construction czar."

There are sharp differences of opinion within the Pentagon about the causes and nature of the delay. Some defense officials place most of the blame on the Army Engineers and their contractors, who are responsible for brick-and-mortar construction; other officials put the finger on the Air Force and its weapon system contractors—Convair and the other hardware manufacturers.

Army Engineer construction contracts, which have been running from $19.2 million to $26 million for the first four Atlas units, accounts for roughly 40% of the total facilities and equipment cost per missile squadron.

(*Story continues on p. 26*)

Jurisdiction and Change Orders Delays Atlas Bases

	Base	Prime Contractors Date of Award	Completion Date Original Date	Completion Date Revised Date	Status
ATLAS	Vandenberg Santa Maria, Calif.	7/58 Hardeman; Frederickson; Stolte; Kasler; Utah Construction	9/1/59	No revision	3-missile launcher complex designed for operational use; turned over to USAF on schedule.
	Warren—1st sqdn Cheyenne, Wyo.	7/58 Geo. Fuller	9/1/59	9/19/59	Turned over to USAF on revised schedule date.
	2nd sqdn	3/11/59 Blount Bros.	1/12/60	7/12/60	99% in place now.
	3rd sqdn	12/4/59 Martin K. Ebby	3/15/61	5/1/61	28% in place, slightly ahead of revised schedule.
	Offutt Omaha, Neb.	3/30/59 Malan Construction Co.	4/10/60	9/3/60	99% completed, expect to make new target date easily.

	2nd sqdn	6/12/59 Morrison-Knudsen	6/1/61	No revision	61% in place.
	Beale Marysville, Calif.	1/15/60 Peter Kiewit	2/1/62	4/1/62	9% in place. Running slightly ahead of schedule.
	Mountain Home Mountain Home, Ida.	4/9/60 Kaiser; Raymond Intl.; Macco	2/1/62	4/1/62	10% in place. Running slightly ahead of current schedule.
	Larson Moses Lake, Wash.	11/12/59 McDonald Scott	4/30/62	3/31/62	30% in place. Running slightly ahead of current schedule.
	Ellsworth Rapid City, S. D.	12/8/59 Lavelle; Scott	12/15/61	No revision	29% in place. Running 6% ahead of schedule.
TITAN II	Davis-Monthan Tucson, Ariz.	2 sqdns. Plan to advertise for bids in the fall, award contracts about 2 months later. Completion date spring of 1963.			
	McConnell Wichita, Kan.	2 sqdns. Plan to advertise for bids in the fall, award contracts about 2 months later. Completion date spring of 1963.			
	Little Rock Little Rock, Ark.	2 sqdns. Plan to advertise for bids in the fall, award contracts about 2 months later. Completion date spring of 1963.			
	Site for two more Titan II squadrons still to be selected. Will probably be at one base as with other Titan II units.				
MINUTEMAN	Malmstrom Great Falls, Mont.	3 sqdns of 50 launchers each. To be awarded in January 1961, to be completed about July 1962.			

(Story starts on p. 24)

Air Force production contractors—particularly Convair—are responsible for installing, checking out, and "integrating" the apparatus for propellant storage and loading, missile handling, guidance control, and other ground support facilities on the Atlas bases—"putting in the jewelry," as one Pentagon man calls it.

Pentagon officials say several issues are involved in the failure to meet operational target dates for the first four Atlas bases:

- Construction change orders in base designs generated by missile launching tests, which have been conducted concurrently with the building of the operational installations. Offutt AFB has received 50 major construction change orders alone in the past year.
- Jurisdictional labor disputes between building trades unions working for the construction contractors and the unions working for the missile producers. Several major work stoppages have occurred.
- The indistinct separation of the responsibilities of the Army Engineers and the Air Force—and their respective contractors—on base construction. As "weapon system" prime contractor on Atlas, for instance, Convair's powers have gone far beyond conventional manufacturing, the critics complain.
- Delayed delivery of important ground support equipment to base construction sites.

Behind all these factors is the general problem of building brand-new types of facilities in which neither the military nor the contractors have had experience before.

Ohio Engineer Can Be An 'Inc.,' Court Rules

The Ohio Supreme Court has refused to bar A. M. Kinney, Inc., well-known Cincinnati consulting engineer firm, from the practice of engineering.

The case involved the question of whether an engineering corporation organized prior to 1943, the year the Ohio legislature prohibited the formation of new engineering corporations, could continue in practice. Last November, in a case involving a Cleveland corporation, the Summit County, Ohio, Court of Appeals decided that no corporation, regardless of when it was organized, had the right to undertake contracts for professional engineering services.

In the case of A. M. Kinney, Inc., however, the Supreme Court now holds that while the 1943 statute prohibited new engineering corporations, it specifically authorized the continuance of the practice of professional engineering by corporations engaged in such practice prior to 1943. The Kinney firm was incorporated in 1929.

Central Area of Motel . . .

. . . Has Plywood Barrel Roof

Plywood barrel shells and precast concrete frame a four-story motel recently opened on the New York Thruway, 12 miles from midtown Manhattan.

Called Motel in the Sky, the project comprises the 76-room building, a large restaurant, swimming pool and parking facilities for 200 cars. Total project cost was $1.5 million.

Eight identical plywood barrel-shell units cover the central roof area 96 x 38 ft. They are supported on 6 x 12-in. laminated timber beams. Spaced 12 ft c-c, the timber beams cantilever to carry the roof shells over the balconies below. Precast concrete plank and girders frame the remainder of the 350 x 70-ft roof area.

Cross, Austin & Ireland Lumber Co., of Brooklyn, fabricated the 5½-in.-thick shell sections from 4 x 14-ft plywood sheets, and 4½-in.-deep laminated ribs. Ceiling plywood is ⅜ in. thick; roof plywood is ¼-in thick. The ribs, spaced at 16 in., form cells, which are filled with glass fiber insulation.

The fabricators made all permanent joints with Phenol-recorcinol waterproof adhesive. They nailed the sections together to form them around the template and to hold them until the joints had set.

Herbert A. Wiener, consulting engineer of Newark, N. J., designed the barrel shells in three materials: precast concrete, cast-in-place concrete, and plywood. Plywood proved most economical.

Typical floor and roof framing consists of hollow concrete plank units supported on precast, reinforced concrete columns and girders. The girders are cantilevered at both ends to support balconies.

Mr. Wiener detailed the girder-column connection without brackets. Column dowels fit through pipe sleeves set in the girders. Grouting the dowels makes the joints rigid.

Garden State Concrete Co. of Lindhurst, N. J., manufactured the precast columns and girders. Flexicore Concrete Products, a division of American Marietta Co. of New York City, furnished the precast floor and roof units.

Samuel Malkind of New York City was architect. Anthony M. Fusco, of Valhalla, N. Y. was the general contractor. Mr. Fusco is also president of the owner group.

Kentucky leads as . .

Five States Move to Tollroads

When Congress created the Interstate highway system in 1956 many construction observers thought the days of toll highways were numbered. But if they are, the number appears to be a large one.

Not only do most of the old tollroads continue in good financial health, but five states have recently come up with plans for new pay-to-drive routes.

• **In Kentucky,** the highway department has hired consulting engineers to plan and design a 120-mile tollroad in the western part of the state. The state is also ready to move ahead on a 43-mile route in the eastern section (see map).

• **In Florida,** a 97-mile extension of the Sunshine State Parkway seems assured with the agreement of New York underwriters to take a bond issue of between $50 million and $55 million from the Florida Turnpike Authority.

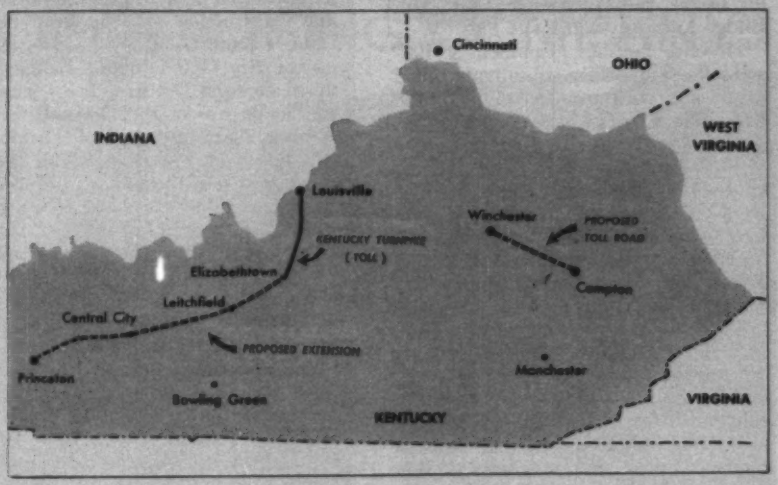
• **In Oklahoma,** the Turnpike Authority has asked approval from the state supreme court for the sale of revenue bonds to finance new tollroads in the southwestern and eastern parts of the state.

• **In Delaware and Maryland,** plans are moving ahead for a cooperative effort on a $140-million tollroad to connect the Delaware Memorial Bridge, near Wilmington, with the Baltimore Tunnel.

The Kentucky road will run from the southern end of Kentucky Turnpike near Elizabethtown to a point near Princeton. Engineering phases of the work are to be completed by next spring with initial bids for construction to be taken by next April. The road is expected to be open to traffic in 1963. Preliminary estimate of cost is $70 million, to be financed by sale of revenue bonds.

The road will provide direct access from Louisville to the Kentucky Lake-Barkley Dam recreational area and tighten economic ties between Louisville and western Kentucky. Although not involved in the present project, Gov. Bert Combs has pledged a further extension to Paducah by 1963. There is no direct connection between these areas on the Interstate system.

The Brighton Engineering Co. of Frankfort (Ky.) will serve as general consultant at a fee of 1%. Nine other engineering firms will do detailed planning and design at fees of 3½%. The firms are: Hurst-Rosche & Associates, Lexington; Johnson, Depp & Quisenberry, Owensboro; Harry Balke Engineers, Cincinnati; Carl P. Broboth, Lexington; L. E. Gregg & Associates, Lexington; C. J. Fuller, Lexington; Preston & Associates, Lexington; H. A. Spalding, Hazard; and Adam K. Grabe Associates, Lexington.



KENTUCKY PLANS a 120-mile extension and a new 43-mile tollroad.

Last month, the Kentucky Court of Appeals upheld key features of the state's 1960 Turnpike Act, clearing the way for financing the 43-mile tollroad from Winchester to Campton in eastern Kentucky and other routes.

Cost of this route is estimated at $30 million. The highway department has begun purchase of right-of-way; completion in 1963 is anticipated.

A firm of New York underwriters has agreed to take a $50-million to $55-million Florida Turnpike Authority bond issue to build a 97-mile extension of the Sunshine State Parkway from its present northern terminus at Fort Pierce to Orlando. Validation of the bond issue by the state courts is the next step.

Turnpike officials feel that location of a buyer for the bonds removed the last major barrier to construction of the extension. They believe the route may be open to traffic during 1962. Its completion would provide more than 200 miles of limited access tollroad from Miami to Orlando.

If Oklahoma gets the go-ahead from its supreme court, investment firms hope to offer bonds totaling from $70-million to $80 million by fall.

Under consideration are a southwest route from Oklahoma City to Chickasha to the Texas border near Wichita Falls, and an eastern route from the direction of Dallas to Tulsa and northeastern Oklahoma. The first route has no competition from the Interstate system; the second is roughly parallel, but east of I-35 between Dallas and Oklahoma City.

The state highway commission has agreed to spend nearly $18 million in state and federal funds for free road connections with the proposed southwest tollroad.

The Delaware-Maryland proposal is for construction of a portion of Interstate Route 95 as a tollroad to speed up its construction.

The Maryland legislature has passed necessary enabling acts. In Delaware, one house passed the required permissive measure before the legislature adjourned.

Since the two states want the route to remain in the Interstate system, permissive legislation had to be passed by Congress. Each state has spent funds on preliminary engineering, right-of-way acquisition and/or construction. Each state has been reimbursed by the Bureau of Public Roads for the sum of the work that has been finished up to now.

The states propose to reimburse the federal government from the sale of revenue bonds. Basic federal-aid highway legislation does not permit Bureau of Public Roads to accept refunds from the states for funds already expended.

To solve the problem, Congress endorsed an amendment to the 1960 Federal Aid Highway Act permitting the two states to return the money contributed by the federal government. President Eisenhower has signed the bill into law.

Authority to Invite Bids For Bridge Modification

Unable to reach an agreement with the contractors on the cost of modifying the storm-racked Hood Canal floating bridge, the Washington State Toll Bridge Authority will invite bids.

Howard, Needles, Tammen & Bergendoff, Kansas City consultants called in by the authority to complete the $17-million bridge, say modifications should cost less than $3 million.

The combine holding the original contract for the bridge claims the new work will be worth more than $9 million. The members of the joint venture are Morrison-Knudsen Co., Henry J. Kaiser Co., Puget Sound Bridge and Dredging Co., General Construction Co.

Plans for the contract will be available about August 1. The bid opening will be three weeks later.

The floating bridge was originally scheduled for completion in May of this year, but accidents that sank or damaged the pontoons delayed construction three times (ENR Feb. 18, p. 30). The latest tragedy to strike the bridge was a financial one—it's running out of money (ENR July 14, p. 131).

LA Would Get More Water Without State Project

The Los Angeles Department of Water and Power took a step last week toward providing the city with additional water without relying on the controversial Feather River Project.

The city agency ordered immediate field investigations, engineering, and economic studies of a "second barrel" addition to the Los Angeles Aqueduct. The addition would increase the amount of water available from the Owens Valley-Mono Basin watershed in the High Sierra.

"This investigation is imperative because of the serious questions that have been raised as to how much the citizens of Los Angeles will have to pay for the Feather River Project and because of the U.S. Supreme Court suit brought against California by Arizona," warned J. C. Moller, president of the city board.

Condemning MWD's capital financing policy, Mr. Moller said, "Under their (MWD's) present, outmoded method of charging for capital costs according to assessed valuations, the people of Los Angeles would have to pay $205 million.

"That is $157 million more than the fair amount that Los Angeles citizens should pay on the basis of water capacity, demand and use. This overcharge would pay for the entire cost of the proposed second barrel, which would bring us twice as much water as we plan to take from the Feather River through MWD."

Around the World...

• **Amistad authorized**—President Eisenhower has signed a bill authorizing construction of the Amistad Dam, a joint U. S.-Mexico project, on the Rio Grande about 12 miles upstream from Del Rio, Texas, near the confluence of the Devils River. Amistad, previously called Diablo, will be about 253 ft high and 6.4 miles long. Estimated cost of the project, exclusive of generating units, is $79.1 million. The U. S. will pay about $56.6 million of the cost and receive proportionate benefits.

• **Voters OK housing**—At a special referendum, voters in Coronado, Calif., approved granting a 50-year lease for a $35-million multi-story apartment project housing 2,000 families. Construction is scheduled for early 1961. Architect is Hugh Gibbs, Long Beach, Calif.; Philip Yousem, Venice, Calif., is the developer.

• **From Cairo to Dokki**—Cairo, Egypt, has just completed a study of a proposal to build a $7-million, 1¼-mile suspension bridge over the Nile River and Gezira Island. The span would link central Cairo with the leftbank district of Dokki.

• **Big hydro job coming**—A proposed $50-million hydro project in Washington appears to be moving toward construction. The Klickitat County Public Utility District has picked a site in Trout Lake Valley for a major water storage dam in its 210,000-kw plans for the White Salmon River. Several more months of preliminary work will be required before the District files with the Federal Power Commission for a construction contract.

• **Tower for Denver**—Construction on a $6-million, 24-story office building in Denver is scheduled to begin in early 1961. R. E. Ervin is consulting architect working with Piel, Slater, Small and Spenst Associated Architects. Structural engineer is Phillips, Carter & Osborn. All are from Denver.

• **Sewers for Boston**—A $40-million sewer construction bill has passed the Massachusetts House of Representatives and been sent to the State Senate. The bill authorizes construction of sewers by the Metropolitan District Commission, which serves cities and towns in the Boston area.

Bay Area to Study Port Authority

Studies by a California commission may lead to formation of an over-all authority in the San Francisco Bay area. The authority would operate existing bridges, ports and airports, and would be authorized to construct additional facilities of this nature.

The Golden Gate Authority Commission, now conducting hearings on the question, is expected to prepare a report in time for action by the 1961 legislative session.

Authority supporters feel there should be greater coordination of publicly owned transportation and shipping facilities to serve the 79 incorporated cities in nine counties bordering San Francisco Bay.

The authority proposal is patterned after the Port of New York Authority. Rapid transit is not included in the study authorization; a rapid transit agency, which cuts across existing governmental jurisdictions, already exists for the San Francisco region.

The Golden Gate Authority Commission is charged with recommending the form that an authority might take, its powers; and which existing facilities it might include. The authority, for example, might take charge of five toll bridges now operated by Department of Public Works, and of the Golden Gate Bridge, now operated by a separate bridge and highway district.

The proposed authority could also include airports now operated by the cities of San Francisco, Oakland and San Jose. And it could include ports operated by the state, municipalities or private interests at San Francisco, Oakland, Richmond and Redwood City.

The authority could, of course, construct additional bay crossings as needed, as well as add to and improve existing port and airport facilities.

So far the Golden Gate Authority Commission has held 11 public hearings in various Bay Area locations. More are due. And the commission will consider reports from engineering, financial and legal consultants.

As envisioned, the proposed authority would have no taxing power, but would depend on revenues for operating expenses and bond redemption. Income from the Bay Bridge alone should be enough to implement a sizable program.

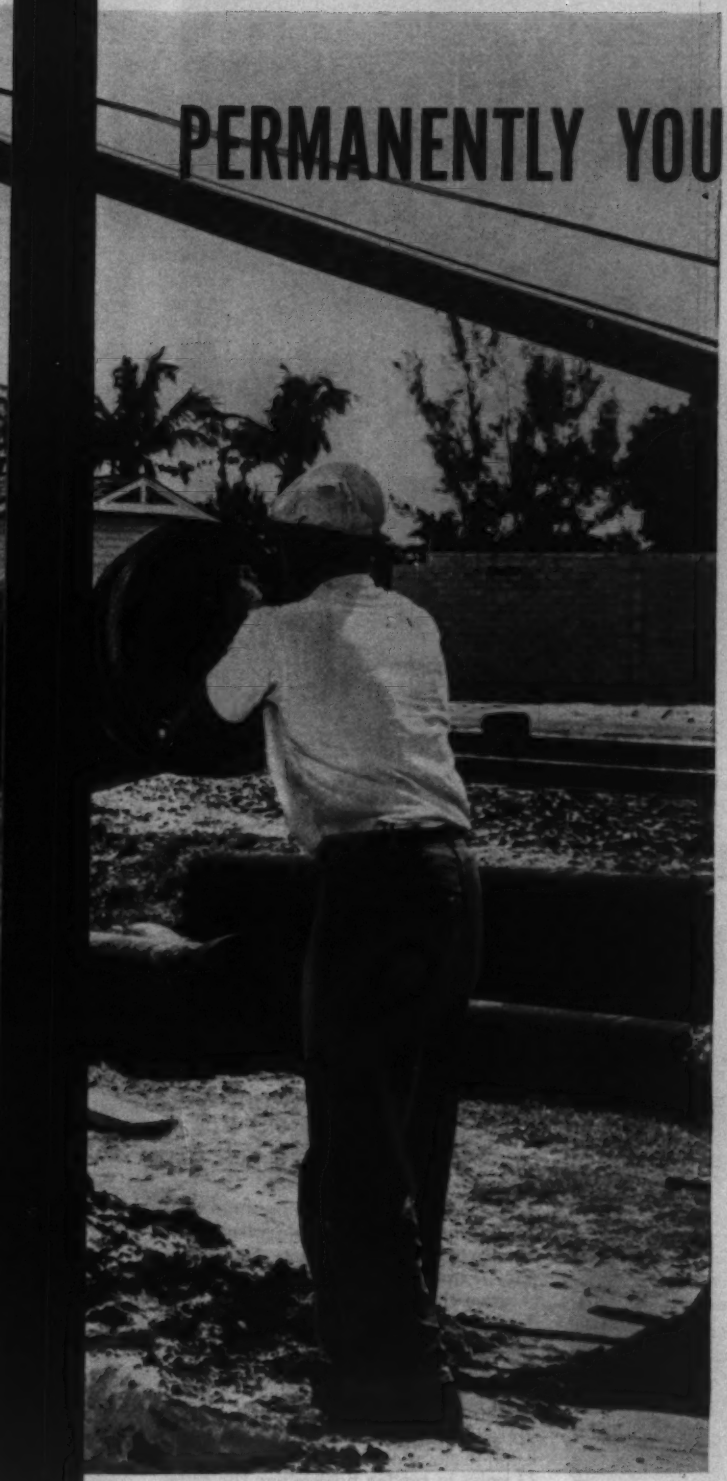
THE MARK OF THE 100-YEAR PIPE



PERMANENTLY YOURS: CAST IRON PIPE

Installed... it stays installed

One thing sure about cast iron pipe—once it's in the ground, it's there for keeps! Over 100 American utilities, having used cast iron pipe steadily for more than a century, can testify to that. And *modern* cast iron pipe gives you greater assurance than ever: great beam strength resists heavy surface traffic; tremendous load resistance absorbs even the most forceful pressures. In fact, when you select cast iron pipe, you can anticipate no major repairs in your water supply system for the next hundred years!

Cement-lined—it stays cement-lined

A smooth coat of cement lining along the inner wall helps prevent the formation of flow-reducing particles. No matter how strong the water is, cast iron pipe always assures a free, steady flow.

Joined—it stays joined

Bottle-tight, rubber-ring joints give you leak-proof protection at the most vulnerable points of your system. Vibrations, surface traffic and washouts present no problem to cast iron pipe. Inherent ruggedness . . . built to perform under all adverse underground conditions . . . repair-free service for at least a century—all good reasons why your choice should be that of water utility experts everywhere. America's greatest water carrier: cast iron pipe.

Cast Iron Pipe Research Association, Thos. F. Wolfe, Managing Director, 3440 Prudential Plaza, Chicago 1, Illinois

CAST IRON PIPE

Helicopter plants poles and strings wire in rugged terrain.

Two Ways to Plant a Power Line

Big-boom crane sets power poles through live wires.

Power line poles and conductors were up in the air temporarily on two West Coast jobs. But the contractors found that a long-boomed crane and a helicopter brought things down to earth in a hurry and with dollar savings.

Roth Construction Co. of Seattle put up a seven-mile, 12-kv line through live wires using a 27-ton crane with a 110-ft boom. It placed 11 poles per working day, more than double the normal rate.

De-energizing the existing line was out of the question because it served businesses and homes along the highway. Lowering the 70-to-85-ft poles between the wires was safer than tilting the poles up from below and obstructed traffic less.

Wilson Construction Co. of Portland erected a 2¼-mile four-conductor line in only 6 hours and 50 minutes on a stretch that went from sea level to 1,000-ft elevation. First a helicopter set 33 poles in predug holes along the hilly right-of-way. Then, from truck-mounted spools, the helicopter threaded the conductors from pole to pole.

Pole setting took 3 hours, 54 minutes. Wire threading took 2 hours, 56 minutes.

Where heavyweights move job records prove...

FIRESTONE TOUGHNESS PAYS OFF BIG!

Extra toughness: you get it in the cord, in the rubber . . . in every inch of Firestone off-the-highway tires. And it pays off big! Helps keep equipment on the job; helps keep jobs on schedule. Behind Firestone toughness are such exclusives as (1) Firestone Rubber-X, longest-wearing rubber ever used in Firestone tires and (2) Firestone Shock-Fortified nylon cord for top protection against impact damage. Through Firestone's Giant Tire Service, an expert will match tires to your job, and handle all tire maintenance. Just contact your Firestone Dealer or Store. Or write: Manager, Off-The-Highway Tires, The Firestone Tire & Rubber Co., Akron, Ohio.

Chicago Will Up Its Big Stake in

Chicago—served by an expressway net that took 15 years to build at a cost of a billion-and-a-half dollars—is ready to go on a new expressway program to meet its 1980 needs.

Those needs are being spelled out this year in a series of reports climaxing a four-year, $2-million Chicago Area Transportation study.

Whatever successes Chicago has had and will have in developing a highway traffic net for its metropolitan area can be attributed to a high degree of coordination: planning, design and construction agencies have worked closely; city, county, state and federal interests in roads have been merged; expressway plans have been linked closely with other developing forms of transportation—the airports, the waterways and harbors, railroads, and rail rapid transit.

Here's what the 15 years of coordinated effort in the nation's second largest city have produced:

Chicago's current expressway program will provide a 117-mile network of free and toll roads in, out of and around the city.

Finished segments of the system are the Edens Expressway, Calumet Expressway, Kingery Expressway, Calumet Skyway and the Illinois Tollway. Underground sections of Wacker and Michigan Avenues might also be included. They provide for traffic movement and distribution around the western and northern fringes of the central business district (the Loop).

This underground route is now connected to the eastern end of the Congress Expressway, and the Congress Expressway is in partial operation, complete except for a critical 3.5-mile gap in its center section.

Elderly Lake Shore Drive, along the lakefront, is an expressway, but not a part of the integrated system.

The $400-million Illinois Tollway (ENR Aug. 7, 1958, p. 37) was completed late in 1958. The 187-mile toll road is made up of three major segments: the Tri-State Toll Road, a belt route around Chicago; the North Illinois Toll Road, which extends from the Tri-State route in a northwesterly direction toward Rockford, Ill., and connects with an Interstate route near Beloit, Wis.; and the East-West Toll Road, a short stub from the Tri-State route westward across the Fox River just north of Aurora, Ill.

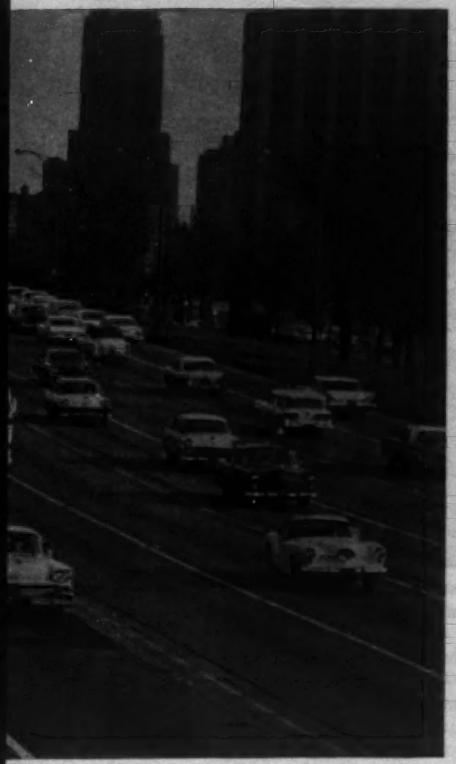
The Tri-State Toll Road is the rim of a wheel for which other major expressways provide the spokes.

The four major routes under construction or planned are the Congress, Northwest, South, and Southwest Expressways.

Full length of the Congress Expressway will be open to traffic this fall. Completion of the 3.5-mile center section will remove the worst traffic bottleneck in the Chicago area. At the west end, a massive interchange connects Congress with the Tri-State and East-West Toll Roads. At the east end, the eight-lane depressed freeway passes beneath the U. S. Post Office building and connects with underground Wacker Drive and surface streets south of the Loop.

One of the busiest traffic interchanges in the world will be the connection of Congress Expressway with the Northwest and South expressways. It is known locally as the Halsted Street Interchange.

The median of the Congress Expressway carriers rapid transit, an extension of Chicago's West Side Subway. Highly successful, it was the first major rapid transit line to be built in conjunction with an expressway (ENR Aug. 20, 1959, p. 24). This approach, which has



Expressways

First stage integrated highway network has cost $1.5 billion.

attracted worldwide attention, greatly increases passenger carrying capacity of the right-of-way without greatly increasing the cost. On Congress, estimated construction costs for the rapid transit line were about one-fifth of the total.

Also scheduled for completion this year is the Northwest Expressway, which will extend from the Halsted Street Interchange to a connection with the Tri-State and North Illinois Toll Roads. On Chicago's near north side traffic will enter and leave the Northwest route by means of a new bridge and a pair of one-way streets—Ohio and Ontario. A connection is provided with the southern end of Edens Expressway. At its outer end, this route will provide direct access to O'Hare Field, Chicago's jet airport.

A project of extreme complexity—both as to design and construction—the Northwest route has many notable features. Two of the most interesting are reversible lanes for part of its length and provisions for rapid transit.

From its connection with the Edens Expressway the Northwest route provides for ten lanes of automobile traffic, four outside lanes in each direction. The central section of the expressway is occupied (see drawing) by two reversible lanes for automotive traffic and a pair of fixed rail rapid transit tracks.

To handle peak traffic loads, the two extra highway lanes will be made fully reversible by an elaborate system of signing and warning devices. Rapid transit tracks are an extension of the Logan Square branch of the Chicago Transit Authority's system. Extension

of this line to O'Hare Field is planned.

Next in line to be completed is the South Expressway, from the Halsted Street Interchange south to connections with the programmed Southwest route, the Calumet Skyway, and the Calumet Expressway. Delayed by several factors—among them a long-standing controversy over a bridge across the south branch of the Chicago river—this route will open to traffic in 1962. It provides access to Chicago Regional Port District's sprawling Calumet Harbor.

Provision is being made in this route for rapid transit tracks in the median. Unique in U. S. expressway design is the "dual-dual" system used for a portion of its length (ENR Jan. 15, 1959, p. 25). In this section, the expressway will have 14 traffic lanes—seven in each direction, four for the inner expressway and three for the outer "collector-distributor" expressway (see drawing). Vehicles entering the collector-distributor roadways will have half a mile or so to adjust speeds, accelerating to enter the inner expressway and decelerating to enter local service roads.

West leg of the South Expressway will join the Tri-State Toll Road and go beyond to Interstate 80, now under improvement by the Illinois Division of Highways. County authorities have begun to acquire right-of-way for this route, with completion scheduled for 1965. Programmed but not yet started is the Southwest Expressway, which will connect the South Expressway with the Tri-State Toll Road and Interstate 55 (US66). Target date for its completion is 1966.

An important connector in the southern end of Cook County is the Moline Expressway, programmed but not yet started.

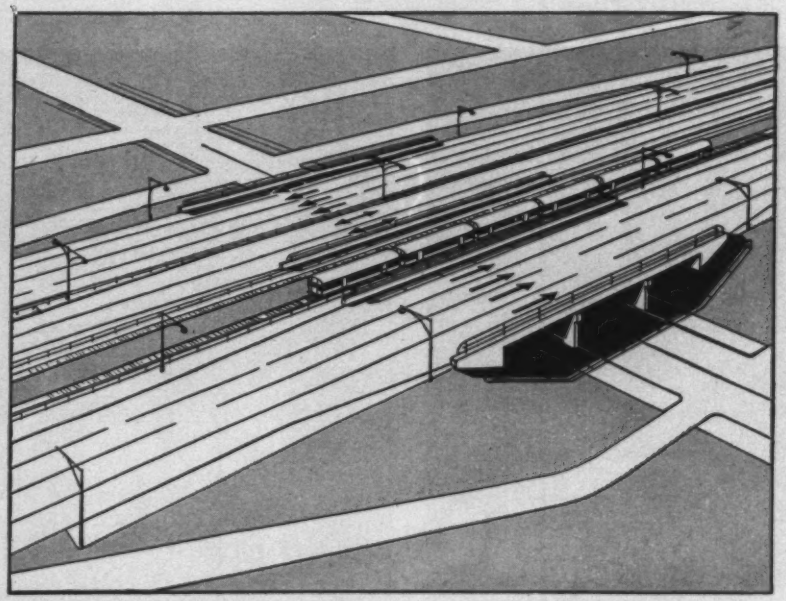
Four major agencies—City of Chicago, Cook County, Illinois Division of Highways, and the U. S. Bureau of Public Roads—have shared costs of the program. At this stage, nearly 75% of the money has come from state and local sources, only 25% from the federal government.

Now, what about the future?

Key to future planning to meet transportation needs is the Chicago Area Transportation Study. It was established late in 1955 by the City of Chicago, Cook County, and the State of Illinois, in cooperation with the Bureau of Public Roads. The study is financed jointly by these four governments and acts in an advisory capacity to them.

Task of the Study is to analyze present travel behavior, forecast future requirements, and devise a long range plan for highways and mass transportation facilities. Work of the Study will result in three major reports, all scheduled for publication this year.

The first of the three—released in January—reported on detailed uses of land and buildings in the 1,236-sq-mile study area and gave the results of surveys of the amount and characteristics of daily travel.



NORTHWEST EXPRESSWAY has two reversible lanes to handle peak traffic movements and double-track rapid transit line in the median.

The second report, expected this summer, will forecast travel requirements through 1980.

The final report, scheduled for next fall, will present criteria for planning, including standards for transportation facilities and for servicing the various land uses in the area. Plans for express highways and rapid transit facilities will be developed and tested. Benefits will be weighed against costs, tax requirements will be estimated and financial feasibility measured.

Recommendations of the study report are expected to supplement the Development Plan for the Central Area of Chicago (ENR Sept. 4, 1958, p. 23), formulated by the Department of City Planning in 1958. It provides for many long needed improvements, including modern transportation facilities. Comprehensive recommendations are made for a traffic plan, automobile parking, extension of the rapid transit system, railroad terminal consolidation, a transportation center, and improved methods of circulation for vehicles, pedestrians, and freight within the central commercial district.

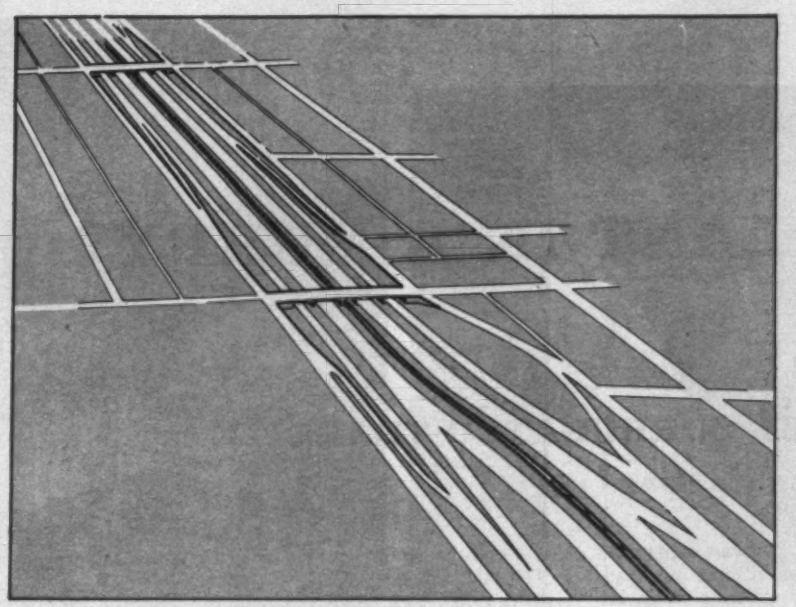
The traffic plan for the central area uses the existing comprehensive expressway plan as a major framework, proposes certain refinements and adds a distributor roadway system around the central commercial district.

Also in the picture is a comprehensive superhighway plan, developed by the Department of Public Works in 1945, which advocates several expressways not in the present program. These include extensions of Lake Shore Drive both north and south, a connection of the south end of Lake Shore with the South Expressway and a Crosstown Route running north and south at California Ave (2800 West), with connections to the Northwest, Congress and Southwest Expressways.

Many other proposals have been made by various individuals and groups, including those for an extensive system of "junior expressways" to serve as feeders for the integrated expressway system, a number of elevated highways, among others. None of these will

These men play

GEORGE L. DEMENT heads Chicago's Department of Public Works.



SOUTH EXPRESSWAY has "dual-dual" design with outer collector-distributors feeding into and out of high-speed inner lanes.

jell until after the study group's report.

Meanwhile, improvements in the city street system continue on a planned basis. A system of "preferential streets" —key arterials—has been designated and is being improved. Key grade separation structures and bridges are being built as funds permit. The city's capital improvements program schedules $64 million for these purposes in funds to be obligated during 1959-63. County roads also are being improved on an orderly basis, with emphasis on key arterial highways.

An outstanding phase of Chicago's attack on highway transportation problems is its construction of city-owned and operated parking garages and lots. Started in 1952, the program has been financed by $41 million in revenue bonds. The combined capacity of multi-story garages and parking lots provided under a four phase program essentially completed last year is about 14,500 cars.

The 1959-63 capital improvements program calls for a fifth phase in the program, representing an expenditure of some $2 million. The central area development plan advocates the construction of additional peripheral parking terminals in connection with the proposed ring roadways; it also proposes that study be given to construction of major parking facilities on air rights of the ring roads.

In March, the chairman of the Chicago Transit Authority Board proposed for public discussion a sweeping $400-million, 20-year program based upon coordination of mass transit, commuter railroads and private automobiles.

The program tied together plans proposed previously by CTA and added a new proposal for the establishment of ten garages at heavily used suburban stations of the North Western, Burlington, Illinois Central, South Shore and Rock Island commuter railroads. Major points in the proposed program:

- Construction of sub-street arcades joining downtown streets and office buildings, with direct connections to sub-street transit lines.
- Establishment of multi-story parking garages at outlying rapid transit stations joined by ramps to adjacent expressways or city streets.
- Extensions and improvements of CTA's rapid transit service through that agency's previously proposed 20-year, $315-million program (ENR Aug. 20, 1959, p. 24).
- The new proposal for construction of parking garages at suburban commuter railheads.

Proposed is a combination of public and private financing. Some idea of the magnitude of the task may be gleaned from the fact that since 1938 three subways have been added in Chicago at a total cost of $102 million, for an average rate of expenditure of $5 million annually. The new plan calls for a $15-million annual spending rate.

Total expenditures of $13.4 million for rapid transit were scheduled by the City of Chicago during 1959-63; this includes the city's share of the cost of providing space for rapid transit tracks in the medians of the Northwest and South Expressways.

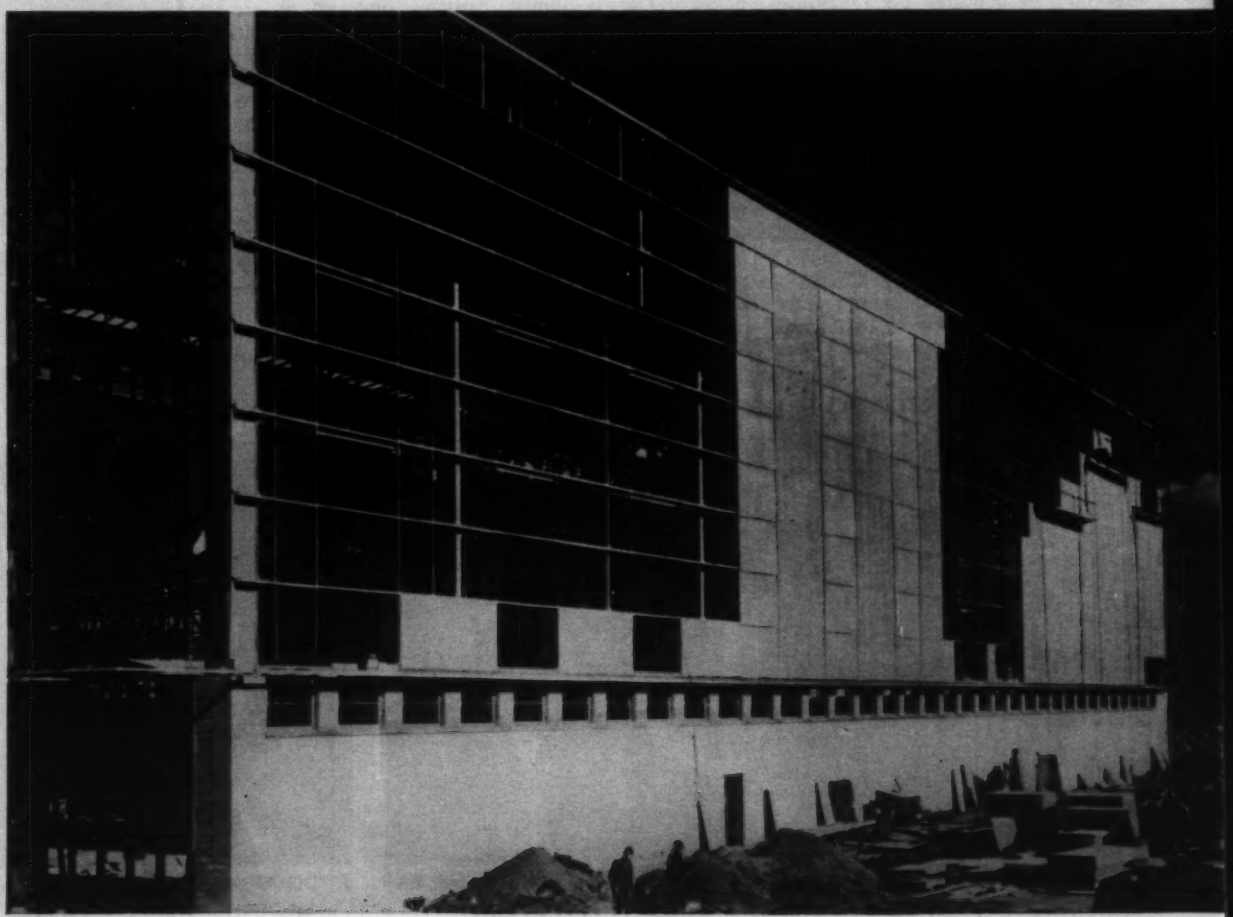
NEED A PLANT IN A HURRY?

JOHNS-MANVILLE CORRUGATED TRANSITE

goes up quickly . . . lasts like stone

You can put up a new building or you can expand an existing structure... and meet the most exacting deadlines for completion... when your exterior walls are Johns-Manville Corrugated Transite. These big panels of asbestos and cement require minimum framing, cover large areas quickly, and are low in original cost. Once in place, these panels last like stone, with practically no upkeep because Corrugated Transite is corrosion-proof, rot-proof and fireproof.

FLAT TRANSITE, TOO. When building design requires a smooth-surfaced material with the same combination of characteristics, J-M Flat Transite is ideal. It was used with Corrugated Transite for the plant shown under construction, below, and completed, at right.



J-M Corrugated Transite handles easily, can be cut or drilled with standard portable high-speed rotary electric tools.

HERE ARE YOUR FACTS ABOUT J-M CORRUGATED TRANSITE... AND J-M FLAT TRANSITE

Width	42" (10 corrugations)	42" or 48"
Length	3' to 12' in 6" increments	4' or 8'
Thickness	Averages ¾"	¼" to 1"
Weight	Normal 4.1 lbs./sq. ft.	Normal 4.0 lbs./sq. ft. for average ¾" thickness

For further information call your nearest Approved Corrugated Transite Erector listed in the Yellow Pages under *Asbestos Products*, or write to Johns-Manville, Box 158, Dept. EN-721, New York 16, N. Y.

Irrigation Line Is

PIPE diameters vary from 18 to 33 in.

The Bureau of Reclamation is using for the first time concrete pipe prestressed without a steel inner shell. The pipe is for a 4½-mile stretch of an irrigation distribution system in California's San Joaquin Valley.

The pressure pipe involved is used for heads ranging from 150 to 200 ft. and differs from other concrete pipe previously used for high pressure service in that it does not have a steel cylinder cast into the concrete. Pressure resistance is developed by winding high tensile steel wire around a dense concrete core. Methods of casting the core and wrapping it with steel wire were developed by Cen-Vi-Ro Pipe Corp., successful low bidder on the $1.2-million contract.

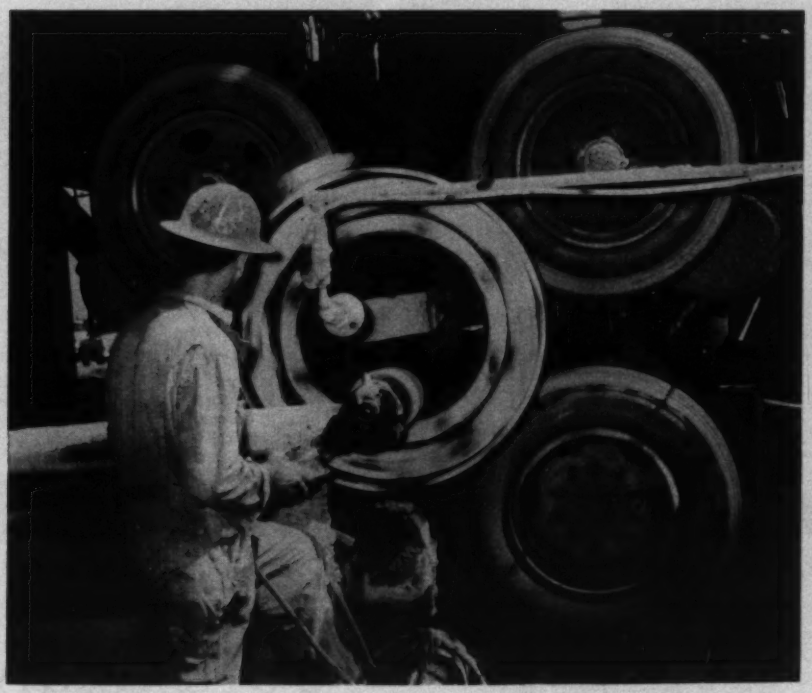
The Bureau of Reclamation is building the distribution system for the Tea Pot Dome Water District, which includes 1,700 acres of rich citrus land near Porterville, Calif. In addition to the non-cylinder prestressed concrete pipe the project includes three miles of conventional reinforced concrete pipe for pressures up to 125-ft head. It also includes nearly nine miles of cement asbestos pipe for smaller (16-in. and below) distribution lines, four pumping plants and an equalizing reservoir.

• **Alternate bids taken**—In calling for bids on the work late last year, the Bureau of Reclamation permitted contractors to bid on any of four different kinds of pipe. Alternates were (a) mortar lined and coated steel pipe, (b) concrete pipe with thick walls and extremely heavy reinforcing cages, (c) concrete pipe including pre-tensioned steel cylinders and (d) non-cylinder prestressed concrete pipe. The 200-ft maximum head made special consideration of such alternates desirable.

Cen-Vi-Ro Pipe Corp., bidding on non-cylinder pipe, won the contract with a figure of $1,208,662—barely under the second low bidder, W. M. Lyles Co., Avenal, Calif., which bid $1,235,149. Highest of nine bids was $1,451,004 and the Bureau of Reclamation estimate was $1,275,960.

• **Pipe manufacture**—Production of non-cylinder prestressed concrete pipe centers around a strong concrete core with 28-day strength averaging 10,000 psi. Such strengths are obtained by a centrifugal casting process developed by the contractor. In addition to spinning the pipe at carefully controlled high speeds, the process includes—as do other centrifugal casting methods—vibration at predetermined optimum frequencies. It also includes pressure-rolling the inside as the concrete is being cast. The concrete has a water-cement ratio of 0.35 or less and little or no slump.

RODS are prestressed before core is spun.



SPIN CASTING combines centrifugal force with roller compaction.

Prestressed Concrete Pressure Pipe

Aggregate is batched with 70% coarse aggregate and 30% fine aggregate. The mix is 6-sack. Type II cement is used for this particular application.

• **Process**—First step in manufacturing the 12-ft-long pipe sections is to prepare the forms. Longitudinal prestressing rods are used to eliminate discontinuity at the ends of the pipe which might result in cracking of the core during the circumferential wire-wrapping process.

Eight ¾-in. rods are used for longitudinal prestressing regardless of the diameter of the pipe. Sizes on this job range from 18 to 33 in. dia although the pipe can be made in much larger sizes and, for that matter, to resist much higher heads—up to 1,000 ft. Rods are stressed by hydraulic jacking to just below the yield point, or about 70,000 psi. They are anchored into a "she" bolt at each end set to form a recess in the pipe. The bolt is removed after casting and the rods are held in place by a semifinished machine nut cast into the concrete. The bolt hole is then filled with mortar so that the rods are not exposed.

Next step is casting the core. This involves centrifugal spinning, vibrating and roller compaction of the inside as the pipe is spun. When the core form is placed on the spinning machine, the roller is inserted through the form extending out each end. Attached to each end of the roller are 10,000-lb hydraulic rams that hold the roller against the freshly placed concrete. The concrete mix is fed by a rail-mounted hopper and conveyor belt that is inserted and retracted to deliver concrete where needed within the form.

Rolling, in addition to making the concrete dense, firmly packs the bell end of the pipe with concrete. Final step is a period of high-speed spinning.

The freshly cast pipe core is held in a steam cure for about six hours before the forms are stripped. After form stripping a curing period of three or four days is needed to attain the 6,000-psi strength necessary for prestressing.

The wire is cold-drawn, high-carbon, high-tensile steel (ASTM spec. A227). The 8-ga wire (0.162 in. dia) is stressed to 150,000 psi during wrapping. Tensile stress is controlled closely with the aid of automatic stress recording.

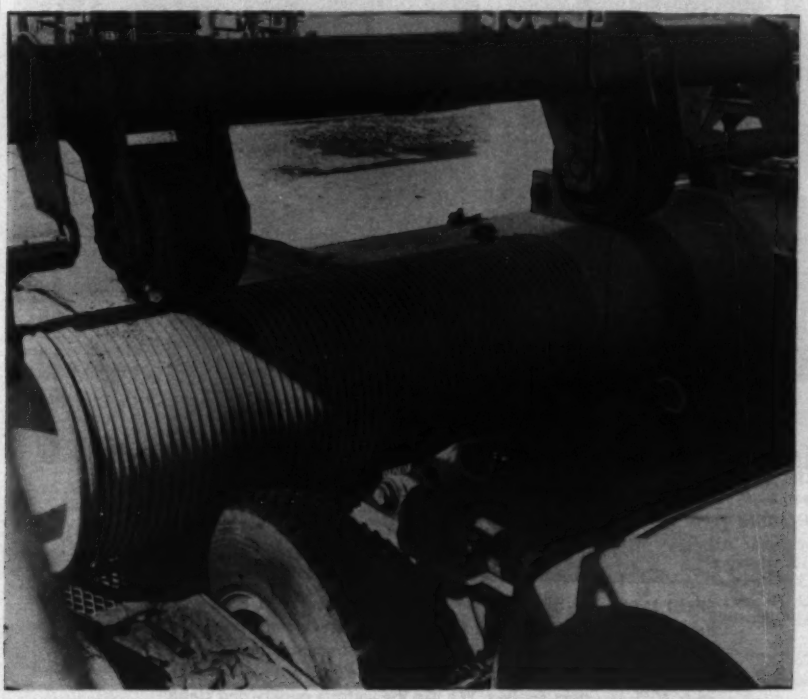
Anchorage devices are cast into both ends of the concrete core. After the pipe is prestressed, each length is subjected to hydrostatic pressure testing.

Final step in the pipe manufacture is mortar coating at least 1 in. thick over the wire. Machinery used for this purpose applies mortar on the pipe at high velocities (nearly 7,000 fpm). The mortar coat application is followed by several days of water curing.

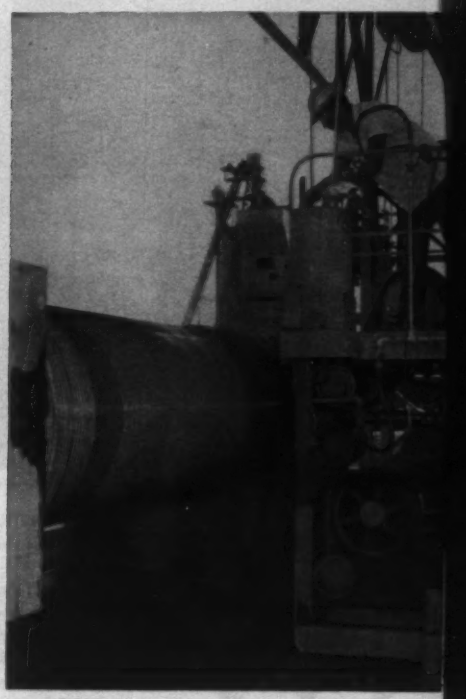
No honing or other shaping is needed for the mating surfaces. The joint is formed by a single rubber gasket "O" ring with the gasket slipped over the spigot end before the joint is made.

The Tea Pot Dome distribution system is one of the last to be built that takes water from the Central Valley Project's Friant-Kern Canal. Peak construction effort on other distribution systems occurred some nine years ago (ENR Oct. 11, 1951, p. 34). One of the reasons the Tea Pot Dome work was not undertaken until recently is that well supplies were available in sufficient quantity to service the land. But a series of dry years has reduced substantially the water available from the wells. The supplemental water provided by the Friant-Kern Canal is badly needed in some areas to help ripen the orange crop this fall. Also, it will guarantee high production in years to come.

The pipe was cast at the Cen-Vi-Ro plant some 40 miles from the Tea Pot Dome Water District. Mike Herrera is general superintendent on the project for Cen-Vi-Ro. R. A. McNeill is resident engineer for the Bureau of Reclamation. Tea Pot Dome Water District is represented by consulting engineer Fred A. Strauss of Stetson, Strauss & Dresselhaus, Inc., Porterville, Calif.



CONCRETE CORE is prestressed by wire under high tensile stress.



PRESTRESSED PIPE is mortar coated.

TODAY'S

SPEED ERECTION. Structural steel goes up faster, costs drop with Republic High Strength Bolts. On the large Cleveland warehouse job pictured, Mr. Jack Kopp of Builders Structural Steel Corp., Cleveland, reports, "Erection was 50% faster and overall job costs 40% less than riveting. We like the uniform quality and clean threading of Republic Bolts, too. Nuts run-on easy, torque-up tight without binding . . . help us complete jobs ahead of schedule."

Steel

This STEELMARK of the American Steel Industry tells you a product is made of Steel. Look for it when you buy.

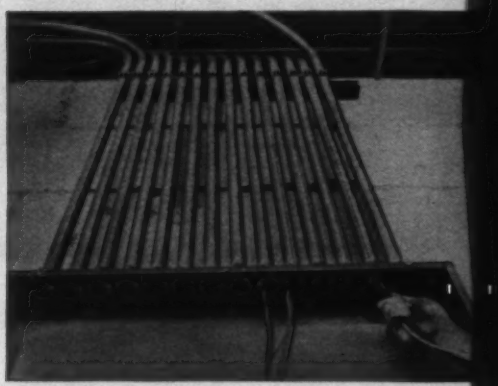
BUILDINGS

GO UP FASTER... COST LESS TO BUILD... GAIN FUNCTIONAL BEAUTY...

with products of REPUBLIC STEEL

FUNCTIONAL, DECORATIVE. Applications for Republic ELECTRUNITE® Tubing in construction are unlimited. Light in weight with a high strength-to-weight ratio. Smooth, unbroken surfaces add eye appeal, resist corrosion and moisture. ELECTRUNITE Tubing is available in full range of sizes and shapes, carbon steel or stainless. Send for complete data.

MODERN, ATTRACTIVE, LOW-COST. Truscon VISION-VENT® Curtain Walls prove that beauty need not be expensive! Versatile VISION-VENT is a modern curtain wall design with windows already in place. Up they go, simplifying erection, providing exceptional economy. For more data on Truscon VISION-VENT, mail the attached coupon.



POWER UP FOR TOMORROW. Engineers and contractors agree, it's smart business to provide for tomorrow's power needs in today's building plans. Specify Republic ELECTRUNITE Electrical Metallic Tubing in the next larger size and you're specifying built-in future electrical capacity . . . at no greater cost than ordinary threaded conduit. Mail coupon for more information.

22 DAYS AHEAD OF SCHEDULE!

CRANEMOBILE®

COMPLETES JOB IN 45% OF WORKING DAYS ALLOWED

When Ernest Ventresca & Sons, Inc., Philadelphia, was awarded a contract for improving an existing storm drainage system in that city, the company was given 40 working days to complete the job. It included the installation of short pipe runs at regular intervals — 2,000 feet of 15 and 18 inch concrete pipe were laid all told — in open ditch and tunnels along a four-mile stretch of East River Drive, the city's main traffic route along the Schuylkill River.

Ventresca & Sons used a **BAY CITY** 25-ton CraneMobile to dig ditch, set pipe, and handle backfilling. Despite poor weather and traffic congestion (the drive remained "open" 90% of the time), the entire project was completed almost a month ahead of schedule. Mr. Ventresca has this to say about **BAY CITY:** "Performance is a must in my work — I get it with a **BAY CITY.** That's why I'll go **BAY CITY** again."

CraneMobile features are "performance-proved" not only on "bread and butter" earthmoving jobs like this but on high, heavy lifts and long boom work as well. Accurate setting of high steel or precise

spotting of concrete beams is constantly assured by CraneMobile controlled lowering under power. Precise control at all boom angles is provided by the CraneMobile power-controlled independent boom hoist. The boom alone, or boom and load, can be raised or lowered simultaneously with any other operation. The hi-collapsible gantry, pin-connected boom and jib, demountable counterweight, and removable outrigger assembly permit rapid strip-down for between-job moves.

CraneMobiles are available in 25-, 30-, 35-, and 40-ton sizes, mounted on specially designed BAY CITY-built 6 x 4 or 8 x 4 carriers. For details and the name of your nearest dealer, write today.

Florida Spans: Made in Louisiana

By William E. Dean

The joint venture for the $8-million Pensacola Bay Bridge in Florida is using the same mass production precasting and prestressing techniques and equipment it used on the Lake Pontchartrain Bridge in Louisiana (ENR Aug. 30, 1956, p. 30), barging the heavy precast elements about 200 miles from the casting yard at Mandeville, La., to the bridge site. Brown and Root, Inc., and T. L. James, Inc., Houston, builders of the Lake Pontchartrain span, won the bid for the Pensacola Bay job against alternate designs.

Many of the structural components of the Pensacola bridge are very similar to those used at Lake Pontchartrain. These include 54-in. prestressed concrete cylinder piles; precast concrete pile bent caps; and precast, prestressed monolithic deck units spanning 60 ft and weighing about 156 tons each.

About 3,000 ft of the bridge rests on cylinder piles 164 ft long. They are believed to be the longest piles of this type ever used in U. S. bridge construction.

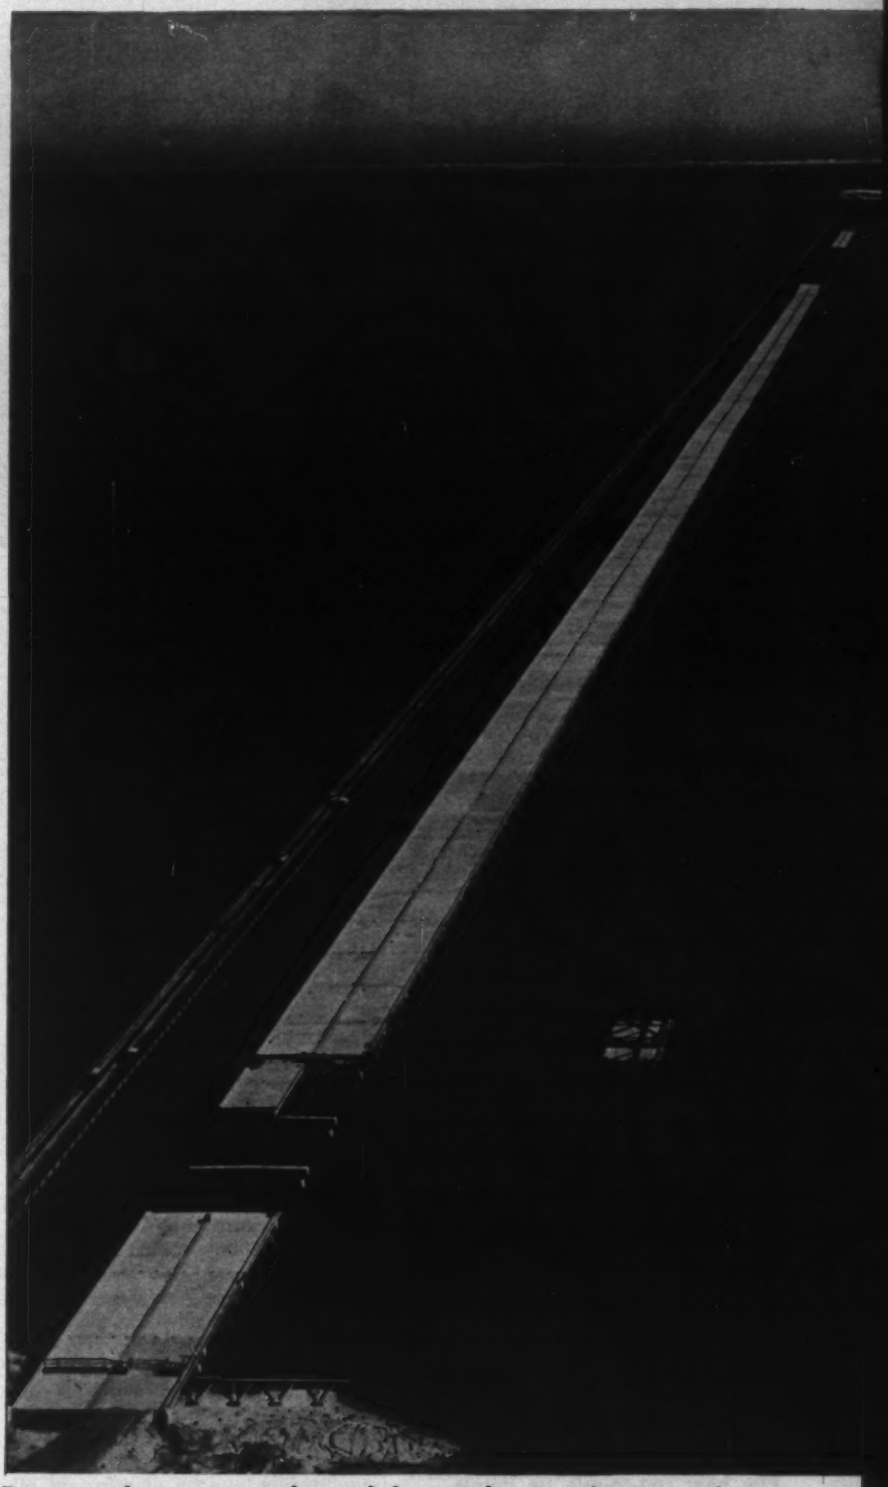
Most of the bridge's three-mile length is of low trestle type construction. One principal channel for navigation requires horizontal clearance of 125 ft and vertical clearance of 50 ft above mean high water. This fact led engineers to design the bridge in three parts.

Part 1, at the channel, consists of three spans of continuous welded steel plate girders in lengths of 123, 154, and 123 ft, supported by pile founded piers built in open cofferdams.

Part 2 consists of two 900-ft lengths, on 4% grade on each side of the channel, connecting the channel span and the trestle on each side.

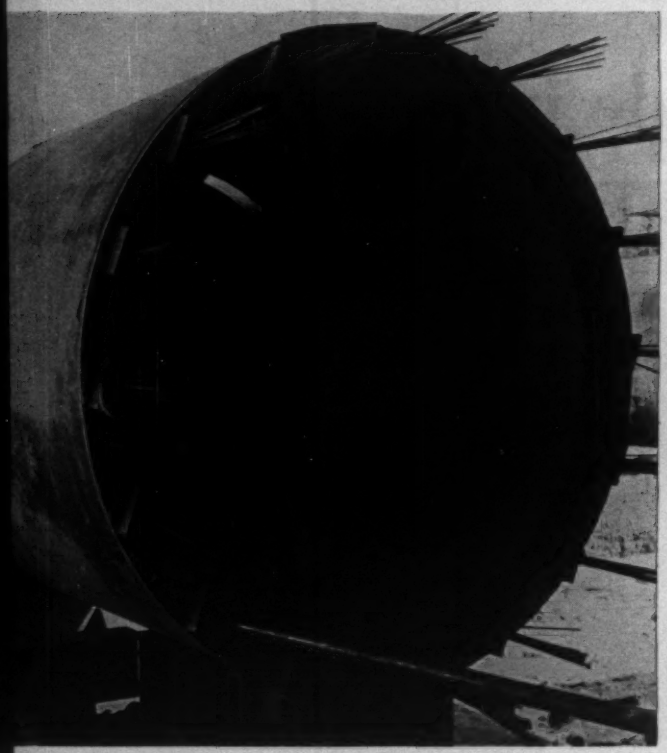
Part 3 is made up of the two concrete trestles–6,600 ft and 6,780 ft long–that connect Part 2 with the north and south shores of Pensacola Bay.

The bridge is 60 ft wide between handrails. Twin roadways, 26 ft wide, are separated by a 4-ft concrete median. Safety curbs, 2 ft wide, are provided on each side. Design live load is H20-S16. The bridge is built alongside, and replaces, an obsolete structure with 20-ft roadway that carries traffic with

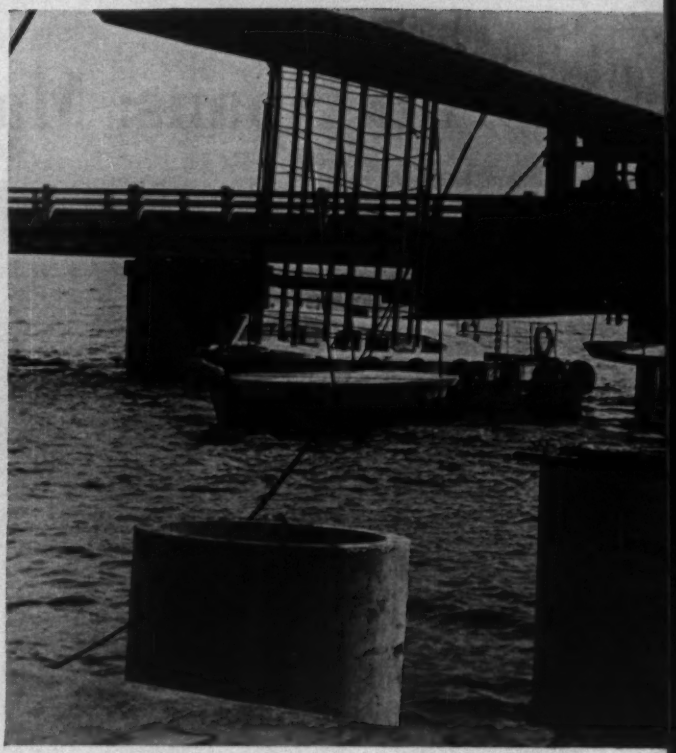


Prestressed parts were barged from Lake Pontchartrain plant.

Mr. Dean is Florida's Assistant State Highway Engineer (Structures) and one of the country's outstanding bridge designers. He is a pioneer in the development of prestressed concrete bridges of the type described in this article.



Post-tensioned piles are "longest" bridge piles.

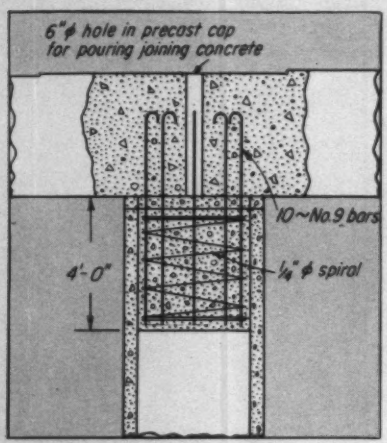


Precast cap goes on with wood disks underslung

seasonal variations from 14,000 to 25,000 vehicles per day.

Water depth across the span is generally from 15 to 20 ft, with maximum of about 30 ft. Below the bottom of the bay, from 40 to 80 ft of silty muck overlies deposits of sand and consolidated shell. The old bridge, built in 1931, was founded on 16- and 18-in. concrete piles from 70 to 100 ft long. Serious and extensive settlement of the old structure indicated that these pile lengths were inadequate.

Before designing the new bridge, engineers conducted an extensive soil exploration program, including 40 borings to depths as great as 150 ft, 23 test piles and four pile loading tests. They found highly variable foundation conditions.



Pile bent cap-to-pile tie details.

Most important factor: although layers of sand and shell from 2 to 10 ft thick were found at comparatively shallow depths, these were often underlaid by deep layers of very soft material. These conditions dictated the use of long piles.

For the trestle (Part 3) State Road Department bridge engineers chose a basic design of 60-ft spans with roadway crown 16 ft above mean high water. The basic design contemplated use of eight Type III AASHO-PCI standard precast, prestressed concrete beams with a 7-in. cast-in-place deck founded on bents of 24-in. square prestressed concrete piles. They prepared alternate superstructure and substructure designs using the same overall dimensions.

The alternate superstructure consists of two precast, prestressed units of monolithic beams and slab. The alternate substructure uses 54-in. cylinder piles. In bidding, either superstructure alternate could be combined with either substructure. On the grade approaches to the channel, designers continued trestle construction to the height where slenderness ratios of the 24-in. piles demanded a stiffer substructure than the simple bents.

For the channel approaches (Part 2), engineers selected pedestal type piers supported by clusters of piles cut off just above the water line. Alternate designs were prepared using 60- and 90-ft spans. The 60-ft spans could be either of the alternates used in Part 3, while the 90-ft spans used AASHO-PCI Type IV prestressed beams with 7-in. deck slab. Either the 24-in. square piles or the 54-in. cylinder piles were allowed as supports for the piers.

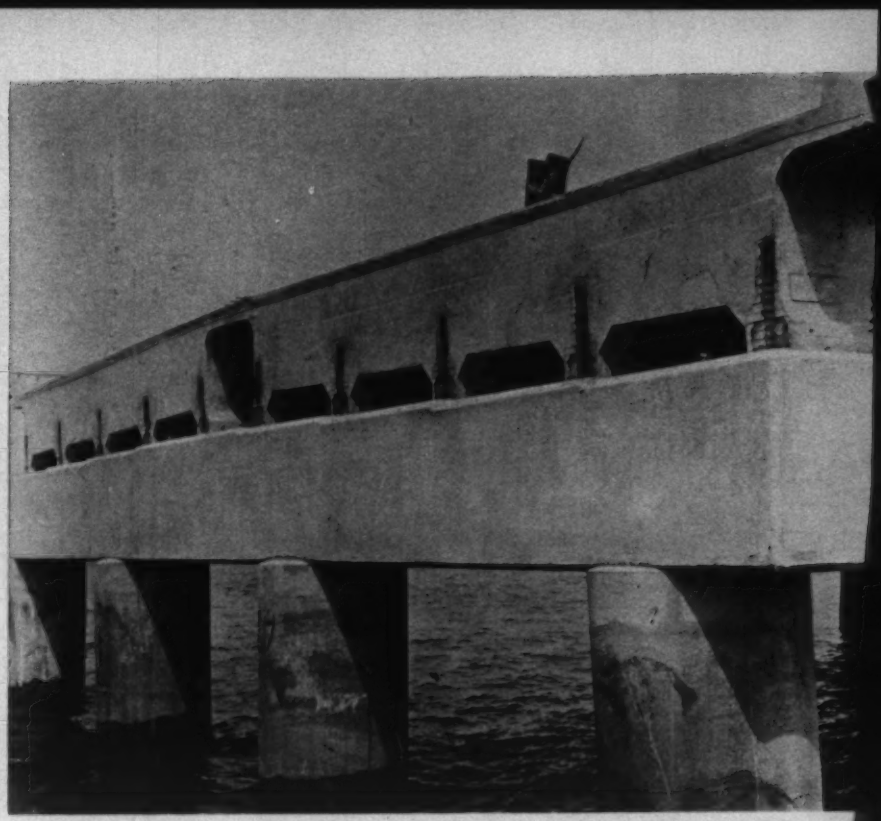
Design loading for the 24-in.-square piles is 60 tons and, for the 54-in. cylinder piles, 150 tons. These loads resulted in the use of either four cylinder piles or ten square piles; bidding quantities for the respective alternates were in almost exactly the same ratio. In design, the cylinder piles were considered only as substitutes for the square piles. Had the maximum stiffness potential of the cylinder piles been given full advantage in Part 2, cylinder pile bents might have replaced some of the pedestal piers.

No alternates were considered for the channel spans.

The low bid was the only one of five based on either the precast monolithic units or the cylinder piles. The monolithic spans were bid 25% lower than the lowest price for the beam and slab design. Two bidders, however, priced their proposed substructure on 24-in. piles lower than the cylinder piles, but the superstructure saving was more than enough to compensate for the differential.

The low bid of $8,136,792 was about 17% below the engineer's esti-

to retain concrete plug.



Prestressed monolithic units span 60 ft to form bridge deck.

mate. The 224 60-ft spans comprising the trestle account for 86% of the bridge length, but only 64% of the cost. For the low bid, unit superstructure cost for the trestle is $2.93 per sq ft and the substructure unit cost (with pile lengths averaging 104 ft) is $3.49 per sq ft, for a total cost of $6.42 per sq ft.

The change from trestle design to the other types for the channel spans and approaches is due solely to the necessity of providing for navigation. An analysis shows the increment of cost due to navigation to be $1,727,543 over a length of 2,200 ft.

Each concrete cylinder pile has 54-in. outside diameter and 5-in. wall thickness. They are cast in 16-ft lengths by the use of special spinning equipment. Each pile is cast with 16 longitudinal ducts for prestressing cables spaced equally around the circumference at mid-section. Each also has ¼-in. spiral reinforcing.

The piles are post-tensioned by being tied together like beads on a string to the desired length. Each of the 16 prestressing cables is made up of twelve No. 6 wires (0.192 in. dia). Initial cable tension is 160,000 psi.

Barged to the bridge site, piles are handled and driven by floating rigs. Each bent has four piles. Pile length varies from 80 to more than 160 ft.

The contractor mass produced the precast pile bent caps by conventional procedures, using collapsible metal forms. Each cap is 59 ft long, 3 ft 6 in. wide, and 4 ft high. Ten No. 9 vertical bars are anchored in the cap over each pile; they extend 4 ft down into each pile and tie the cap and piles together. After the cap had been placed on top of a bent, concrete is forced through a 6-in. hole in the cap into the top 4 ft of each pile.

Two identical precast, prestressed monolithic deck units comprise the width of the bridge. Each deck unit is 60 ft long and has an overall depth of 4 ft 4 in.

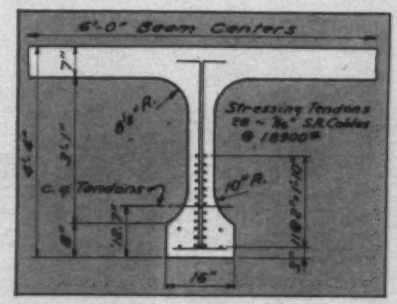
Each deck unit has five pretensioned girders cast integrally with the 7-in. deck. Stressing tendons are 28 7/16-in. steel cables per girder, pretensioned to a load of 18,900 lb each.

Engineers gave careful consideration to camber in designing the deck units. Initial inverse camber must be provided in the casting to allow for elastic camber at release of the stressing force and for additional camber due to creep. To minimize the camber a rather high center of gravity of the stressing force was used. Designers used more stressing force and a greater number of cables than they would have if the stressing was concentrated in the bottom flange; the eccentric moment and amount of camber were correspondingly reduced.

Spans were cast with an initial sag of ½ in. Upon transfer of the stressing force, initial camber of about ⅜ in. occurred. Camber growth of ⅛ to ¼ in. has come during the first six months of slab life, after which a stable condition seems to have been achieved. A careful check of slabs that have been cast for ten months shows a profile varying from no camber up to a maximum of ¼ in.

Since the contractor began setting the pile bent caps and deck units progress has been at the rate of five completed spans (300 ft of four-lane bridge) per week. Pile driving has been maintained ahead of these operations at all times. Completion of the bridge is expected in September.

The general contractors are building the project through their subsidiary company, Prestressed Concrete Products Co. of Mandeville, La. The New Orleans office of Pittsburgh Testing Laboratories has inspected all plant operations for the owner. Design and supervision of field operations is by the engineering staff of the Florida State Road Department.

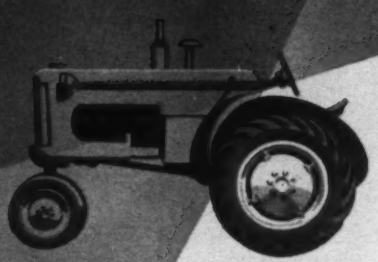


Typical interior beam details.

You get CUMULATIVE RUST PROTECTION if all three coats are made with

PERMOX® 1-4-3

(one-for-three)



Permox 1-4-3, Basic Lead Silico Chromate, is an effective, anti-corrosive pigment especially designed for all three paint coats . . . with rust inhibition in every coat! When used in all coats, maximum protection against rust becomes *cumulative*, each coat minimizing the possibility of corrosion arising from skips and holidays during application. More significantly, with Permox 1-4-3 it is now possible to obtain an anti-corrosive finish coat which permits the use of the same paint for spot priming and finishing.

Permox 1-4-3 is also characterized by excellent chalk resistance and low tinting strength. These qualities make possible the production of durable maintenance paints in an almost unlimited range of colors without sacrificing anti-corrosive qualities.

Suggested formulations for a wide variety of anti-corrosive and decorative paints designed for specific needs are yours for the asking. We welcome inquiries.

Permox 1-4-3 Conforms to ASTM Specification D-1648

New hangar at Paris' Orly Airport provides . . .

. . . 129,000 sq ft of unobstructed floor space beneath . . .

Long Cantilever Roof for Jets

A new hangar for Paris' Orly Airport, officially inaugurated June 29, is claimed to be the world's largest. Its purpose is to provide the unobstructed floor space needed for big-jet maintenance. It's big enough to park six Boeing 707s or eight Caravelles in a single wing-tip line.

The hangar has a clear opening 984 ft long and 49.2 ft high. The roof cantilevers 125 ft and an additional 46 ft in back of the cantilever support posts brings the hangar's total depth to 171 ft. The hangar floor—129,000 sq ft—is completely free of obstructions.

Two earlier hangars (ENR Oct. 27, 1955, p. 34) with the same 171 ft depth, but with smaller clear openings —712 and 535 ft—have proved the success of the design. These two older hangars are shown in the upper right corner of the upper picture of the new hangar.

Ten trusses, cantilevered from stayed steel columns, are the major roof-carrying members. Truss chords are welded box members. These cantilever trusses, spaced 82-ft c-c, carry longitudinal trusses about 30 ft apart; the secondary

With the new streets—curbs and sparkling, silicon carbide-impregnated sidewalks of modern concrete

For 43 blocks of downtown streets, ...the pavement built to stay put

"The 'new look' of our downtown business district is causing plenty of excitement in and around Abilene!"

Says HENRY NABERS, *Abilene City Manager*

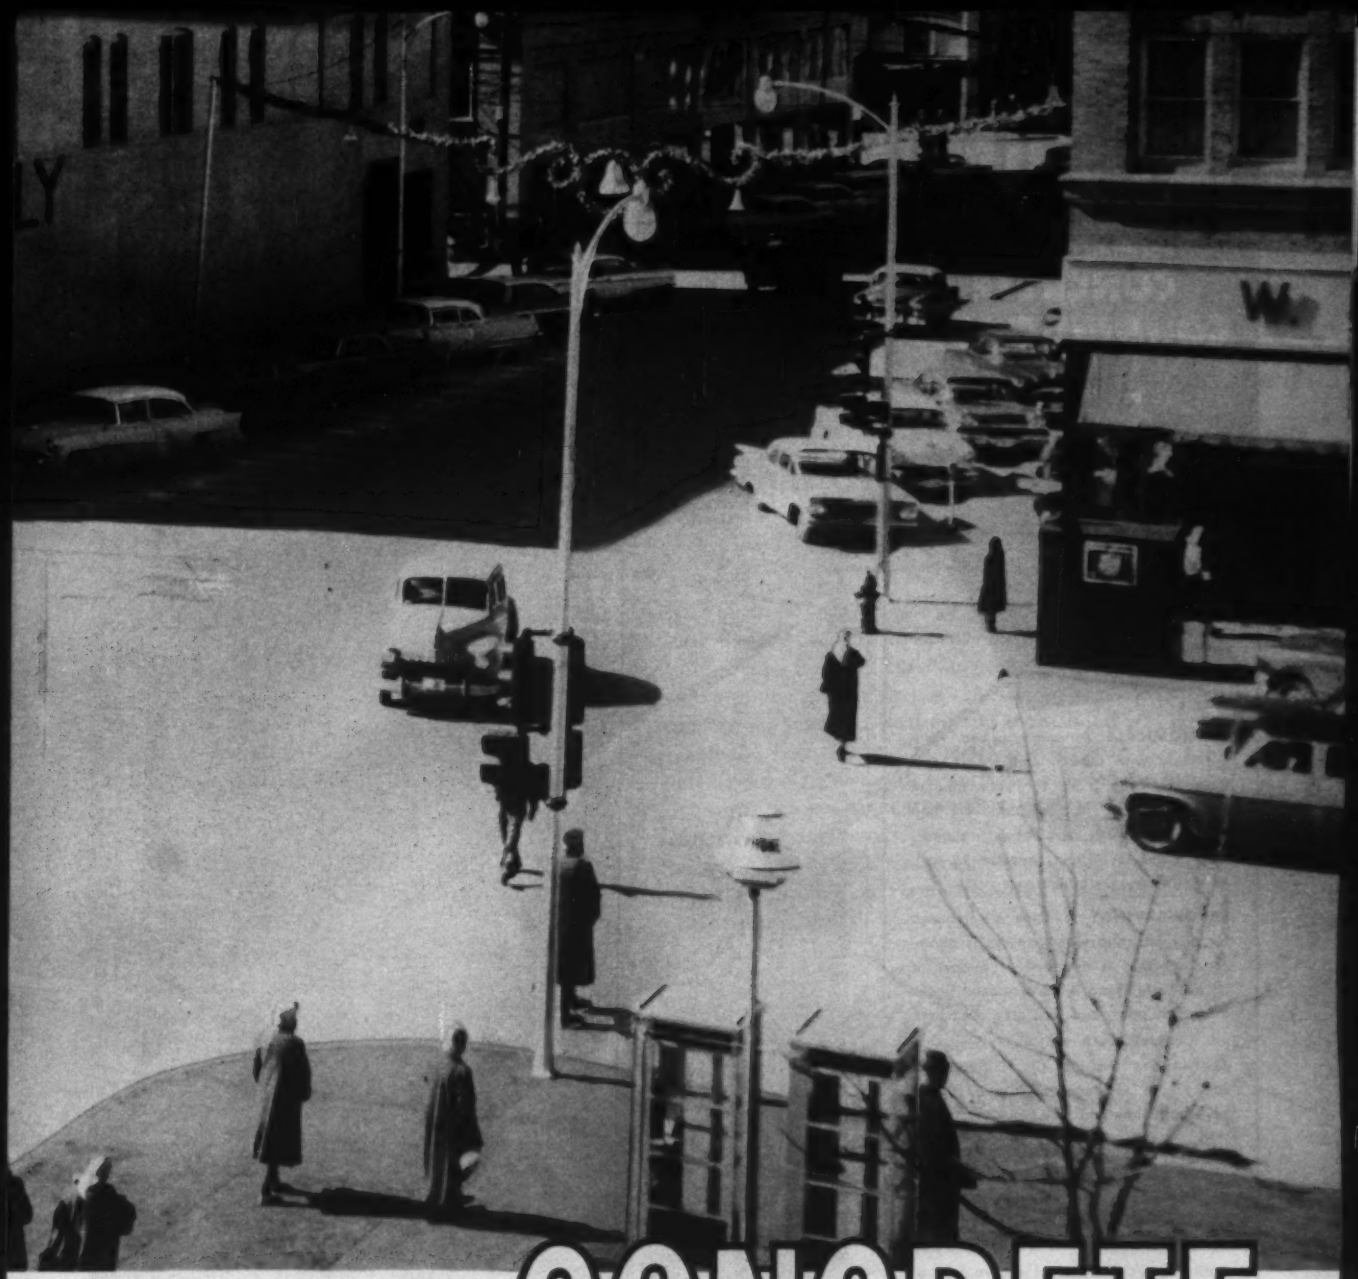
"Our bright new concrete streets and sidewalks are helping to bring shoppers back downtown. Business has really improved since the dedication ceremony.

"The durability of concrete and the low upkeep costs make it the best investment for our downtown area. The good experience with Abilene streets paved with concrete as far back as 1924 helped convince us of that."

In an all-out fight against "downtown blight", Abilene, Texas, modernized the entire business district with all new concrete streets in one giant renewal project.

Abilene shoppers and shopkeepers alike can expect a whole lifetime of enjoyment from their attractive, new concrete streets. Pavement is six inches of portland cement concrete on a 6-inch soil-cement subbase.

The new streets won't be blocked off for expensive surface build-up treatments every few years or torn up for



Abilene chose CONCRETE for 50 years and more!

major repairs. Even on the hottest days concrete doesn't get soft, tacky or slick. Traffic can't push its solid surface into ripples and washboards.

There are no "moving parts" in concrete to cause hidden wear. In fact, concrete grows stronger year by year. That's why engineers predict today's modern concrete pavements will far outlast any other type, serve 50 years and more!

Concrete pleases taxpayers, too. Maintenance costs run so low that the moderate first cost isn't just a down payment. Even on street lighting money is saved. Concrete reflects light, so fewer fixtures are needed. City electric bills go down.

Cities everywhere with urban renewal problems are going to concrete. It's the first big step in an effective modernization program.

PORTLAND CEMENT ASSOCIATION *A national organization to improve and extend the uses of concrete*

JAY-PANS

America's Finest Forming Medium for

CONCRETE CONSTRUCTION

ECONOMICAL! Although priced competitively with conventional forms, Jay-Pans give you more for your money! Always new . . . custom built . . . they eliminate drippage, and the vertical sides mean good savings in concrete, as well as a nice, smooth appearance.

LABOR-SAVING! Jay-Pans are tailored for any job, and when cutting is necessary, all that is required is a saw or pocket-knife. Sand is never placed under a Jay-Pan pour, and jobs stay on schedule because there are always enough Jay-Pans on the job site. Lightweight, easy to use, Jay-Pans end chipped floors, save both time and men!

WEATHER-RESISTANT! These are not regular "paper" pans. Jay-Pans are made of "freezurboard"—a patented, heavy-duty asphalt-impregnated material similar to asphalt roofing, which is saturated with asphalt. Millions of square feet of federal government, state, and private projects have proved the reliability of Jay-Pans under all weather conditions.

ALL SIZES! Tapered, adjustable, long-span, waffle, or cored slab, Jay-Pans give a clean job . . . come in all standard sizes as well as practically any other size you need to fit your most economical module.

LAWRENCE PAPER COMPANY

Construction Products Division,

VIking 3-8111 Lawrence, Kansas,

trusses extend out 123 ft beyond the last cantilevered truss to each end of the building. Steel purlins carried by the longitudinal trusses support a corrugated steel roof deck.

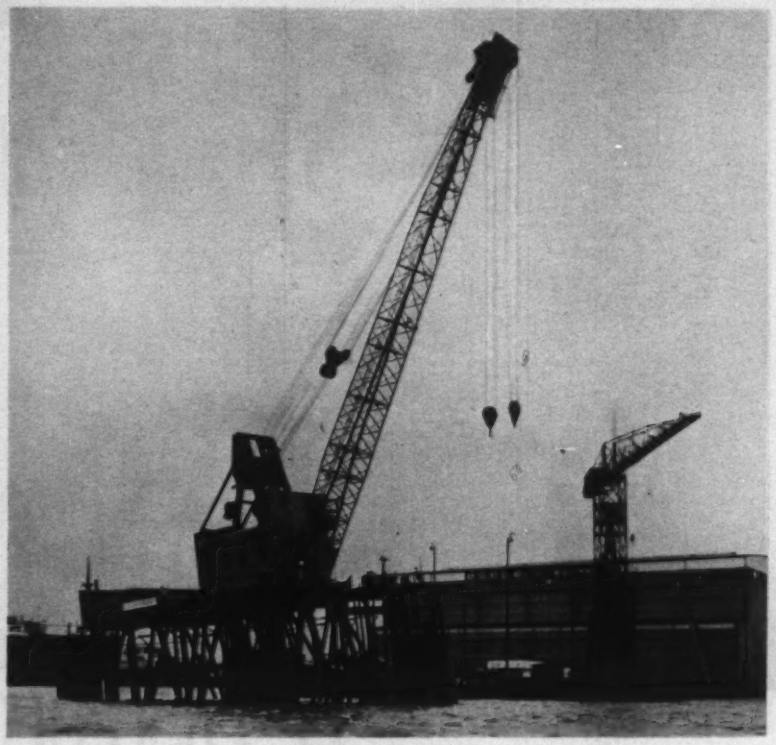
Bracing at the front of the hangar consists of two vertical trusses and a horizontal truss spanning between the ends of the main cantilevers. Three sets of tracks along the bottom of the vertical end trusses guide the tops of the hangar's 12 sliding doors—each is 82 ft wide and weighs 30 tons.

The sloping steel backstays of the cantilever roof are bedded in concrete anchor blocks, 18x13 ft and 13.1 ft deep.

The hangar floor is 12-in.-thick concrete.

The rear hangar wall is shared with annex buildings. Supplementary structures cover an area 968 ft long by 164 ft wide. One building houses workshop; another is a six story office building.

The $6-million project took less than two years to complete. Aeroport de Paris used its own design and building staff for the hangar.



Floating Crane Sinks Itself

A Dutch floating crane that looks like an offshore drilling platform sinks itself to do its job.

The base of the floating structure is a 78x78x8-ft pontoon. Four cylindrical dry caissons are installed on the deck of the pontoon (one at each corner) to house electrically driven ballast pumps and manifolds. When the pumps flood the ballast tanks built into the pontoon, the entire rig sinks to rest on the sea bed. This support is expected to eliminate the effects of waves and currents on the rig. Emptying the ballast tanks refloats the structure.

The working deck supporting the crane is located 30 ft above the top of the pontoon.

The rotating crane on the working deck has a 130-ft boom capable of handling 15 tons at a 120-ft radius. A two-cabin deckhouse contains a galley, sanitary facilities and the generator.

After proving trials are completed, the crane will be towed from the outfitting yards of its maker, N. V. Boels Scheepswerven en Machinenfabrik, Bolnes, Holland, to the mouth of the River Escravos in Nigeria. It will be used to build a six-mile-long breakwater. During the voyage the crane will be stowed in four parts on the deck.

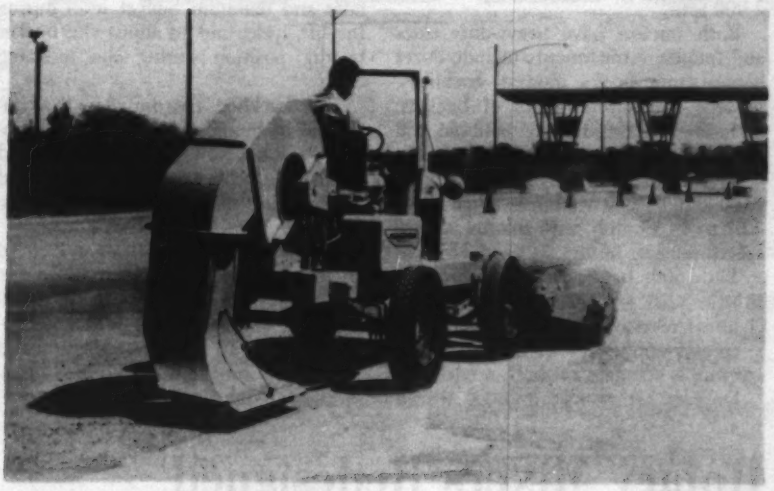
Roller Speeds Concrete Finishing

The Jitterbug Roller speeds and eases the work of concrete finishing, according to the manufacturer.

The roller takes the place of a float. As the operator pushes the roller out over the concrete, 90 steel rods, forming a 35-in.-long cylinder wall, push the larger aggregates just below the surface to make it ready for trowelling. A 12-ft magnesium handle enables operator to stay out of way of the troweller. GOLDBLATT TOOL CO., KANSAS CITY, MO.



New Broom Sweeps, Blows Clean

A self-propelled Sweeper-Blower for cleaning pavements for guide line marking travels at up to 50 mph. It has a range of eight speeds from 1 mph up.

The blower has 10,000 cu ft capacity generated by a large paddle type wheel, and is turntable mounted for right, left or center blowing. The nozzle can swivel 360 degrees, is manually adjustable for travel, and has hydraulic controls.

The 4 ft wide broom is available in either fiber or wire. It has five sweeping positions. When in maximum right or left sweeping positions, the broom sweeps an area more than 14 in. beyond the outer line of the front wheels. This permits the wheels to stay on the pavement when cleaning for outer edge line marking. The broom raises and lowers hydraulically for travel and for sweeping adjustment. Moline Tractor Line Expanded

Powered by a 206-cu-in. engine, the Big Mo 500 wheeled tractor develops 56 bhp on gasoline and 50 bhp on diesel fuel, at 1,750 rpm. The Big Mo 600 develops 60 bhp on gasoline at 2,000 rpm.

Both tractors have heavy-duty axles and frames. Attachments include dozer blades, crane hooks, mowers, backhoes, loaders, and several types of buckets, including ejector, trench, bellhole and material and snow buckets.

Five forward speeds on both the "500" and "600" models range from 2.63 to 14.57 mph, with the five reverse speeds ranging from 3.29 to 18.22 mph.

The 600 has a hydraulic reverse shuttle gear, while the 500 has a mechanical reverse shuttle. The 600 has a torque converter. Hydraulic power steering is standard on both models.

Double constant-running, direct-coupled hydraulic pumps are mounted at the rear and operate the loader, backhoe, power steering and other attachments.

The loader has a one-lever control to raise and maintain bucket level during the lift cycle, and to adjust the bucket to dig position during the lowering cycle.

The backhoe has individually controlled hydraulic outriggers. The operator's seat pivots with the boom and is offset to provide a complete view of the 190-deg swinging boom and the work area.

Loader bucket capacities are $\frac{3}{8}$ cu yd on the 500 model and $\frac{1}{2}$ cu yd on the 600 model. Lifting capacity is 2,000 lb on the 500 and 4,500 lb on the 600. Lift height is 10 ft 7 in. on the 500 and 10 ft 10 in. on the 600. MINNEAPOLIS-MOLINE, HOPKINS, MINN.

Rotary Mixers Redesigned

Major improvements have been made in the "Seaman" Pulvi-Mixer and Trav-L-Plant line of rotary mixers for soil stabilization and highway construction. Changes are said to increase functional performance and add new safety factors for operators.

Redesign of the hood and fenders has improved accessibility to all parts of the engine and drive system and has provided greater ventilation during operation. Also featured are a catwalk alongside the operator's station and improved visibility over hood and fenders.

Power steering on both machines has been improved to provide simpler upkeep and easier conversion in the field on models originally purchased with manual steering. An improved rotor transmission is used. Both front and rear wheels have been changed for better traction and flotation. New front wheels utilize 9.00 x 24 tires, a standard size more widely available. Rear wheels now accommodate standard 15.00 x 34 tires, or optional 18.00 x 26 size with diamond tread. AMERICAN-MARIETTA CO., CONSTRUCTION EQUIPMENT DIV., MILWAUKEE 1, WIS.

100% ASBESTOS

SPRAYED "LIMPET" ASBESTOS is the *only* sprayed-on *fire-proofing* material whose fibres are 100% asbestos. It *alone* has a four-hour fire-rating for a minimum of ½" under a cellular deck—and for 1¾" direct to beams. (Underwriters' Laboratories, Inc.) In fact, **SPRAYED "LIMPET" ASBESTOS** has more *approved* ratings than any other sprayed-on fire-proofing material. It achieves the best *approved* ratings with the least material—without adhesives, without multi-layer spraying or pressing. It has no "or equal".

Get more details today . . . on the advantages of SPRAYED "LIMPET" ASBESTOS for acoustical treatment, insulation, and condensation control as well as fire-proofing. Write to Dept. B-1370 for this booklet. Keasbey & Mattison Co., Ambler, Pa.

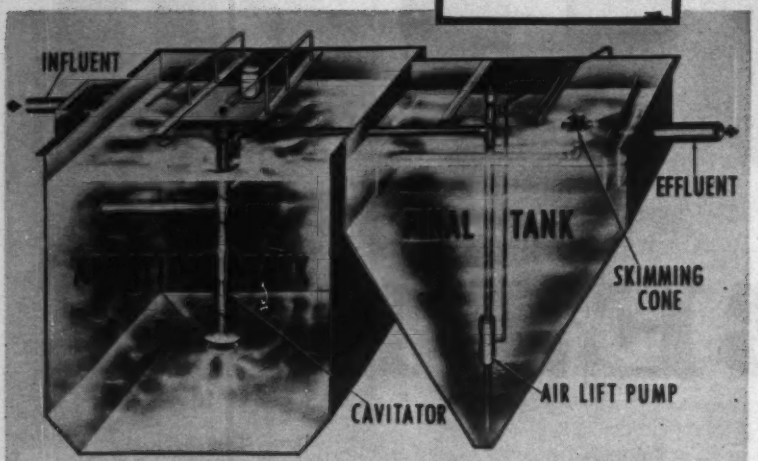
Factories



"PC" CAVITATOR®

Furnished as a complete plant for minimum on-site construction and labor

Make a simple excavation . . . pour a concrete slab. That's all the on-site construction this treatment plant requires. And, because the PC Cavitator is manufactured in standard sizes that meet the specifications of consulting engineers, the sewage treatment dollar goes farther. Fast delivery and quick startup keep construction schedules flexible, too.

These Yeomans prefabricated plants are built around the Cavitator which treats sewage by *aerobic digestion*. Standard systems are supplied in capacities from 2000 to 7500 gallons per day.

The Cavitator achieves a much higher oxygen transfer efficiency than other types of systems. Furthermore, it requires no blowers or compressors . . . no installation and maintenance of diffusion tubes or plates. There is nothing to clog. The simple mechanism requires only minimum attention.

When you buy a PC Cavitator plant, Yeomans can furnish a factory-trained engineer to supervise installation and train operators—taking up where the consulting engineer leaves off. The investment is further safeguarded because each PC Cavitator plant incorporates Yeomans' 60 years of experience in handling sewage. Investigate its advantages today!

Hinged Hopper Wings Help Load Paver Finisher

Finger-tip controlled folding hoppers and steering control improvements are features of the redesigned Express and Suburban rubber-tired bituminous paver finishers.

Hopper wings are hinged at the conveyor line so that all material moves onto the conveyor when sides are raised hydraulically through simplified controls, which are standard equipment. The controls permit operator adjustment of "wings" for travel width clearance or for paving around obstructions.

Designed to reduce truck waiting time and permit additional operation between truck loads, the hoppers' folding feature is said to provide for a free and steady flow of bituminous mix to the conveyor and spreading screws.

Wheel-type power steering has been added to the Express Paver, while the smaller Suburban unit (previously equipped with wheel steering) now also has hydraulic power.

Also available is an optional screed level control that is automatic, and eliminates continual adjustment of the screed to match joints. Designed to travel on a previously placed mat or curb, the level control shoe has a swing-up feature and can be used on either side of the machine to anticipate surface irregularities and correct screed planing angle.

The Express Paver has an air control console. Mounted in front of the machine's steering wheel, it provides controls for traction clutch, conveyors and left and right conveyor-auger adjustment that sets automatic feed control and manual override. BLAW-KNOX CO., CONSTRUCTION EQUIPMENT DIV., MATTOON, ILL.

Hydraulic Power Pumps Deliver High Pressure

Four hydraulic power pumps which the maker says develop 10,000 psi continuous pressure are designed to drive rams, jacks, presses and similar hydraulic units.

The pumps are powered by a self-contained ¾-hp, 115-230 v, ac, single-phase, constant-speed capacitor-type electric motor. Pumping capacity is 150 cu in. per minute at pressures up to 150 psi with automatic change-over to 30 cu in. per minute up to 10,000 psi.

Usable oil volume in all four models is 260 cu in. Motor can be started under load, while ram is held in position under pressure. GREENLEE TOOL CO., ILLINOIS NATIONAL BANK BLDG., ROCKFORD, ILL.

ELECTRIC CRANES FROM 6 TO 250 TONS CAPACITY

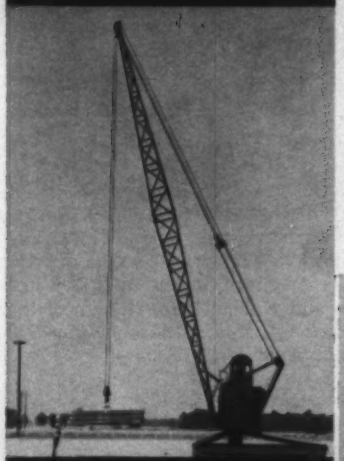
Pedestal Cranes, 6 to 25-ton capacity, mount in small area — operate on commercial power.

LeTOURNEAU full-revolving cranes, in load capacities from 6 to 250 tons, are winning an outstanding on-the-job reputation for economy, safety and precision. Here are the reasons: compact construction reduces space requirements for installation . . . counterweights and hook rollers are eliminated by special ball-socket suspension. Full-electric operation permits precision control of load — eliminates complicated drive systems. Individual high-torque LeTourneau Electric Motors drive each operating component directly through a constant-mesh gear train . . . always keep power on the load, both up and down. Fingertip electric switches provide instant control of starts and stops, braking, full 360-degree swing. For more information, write:

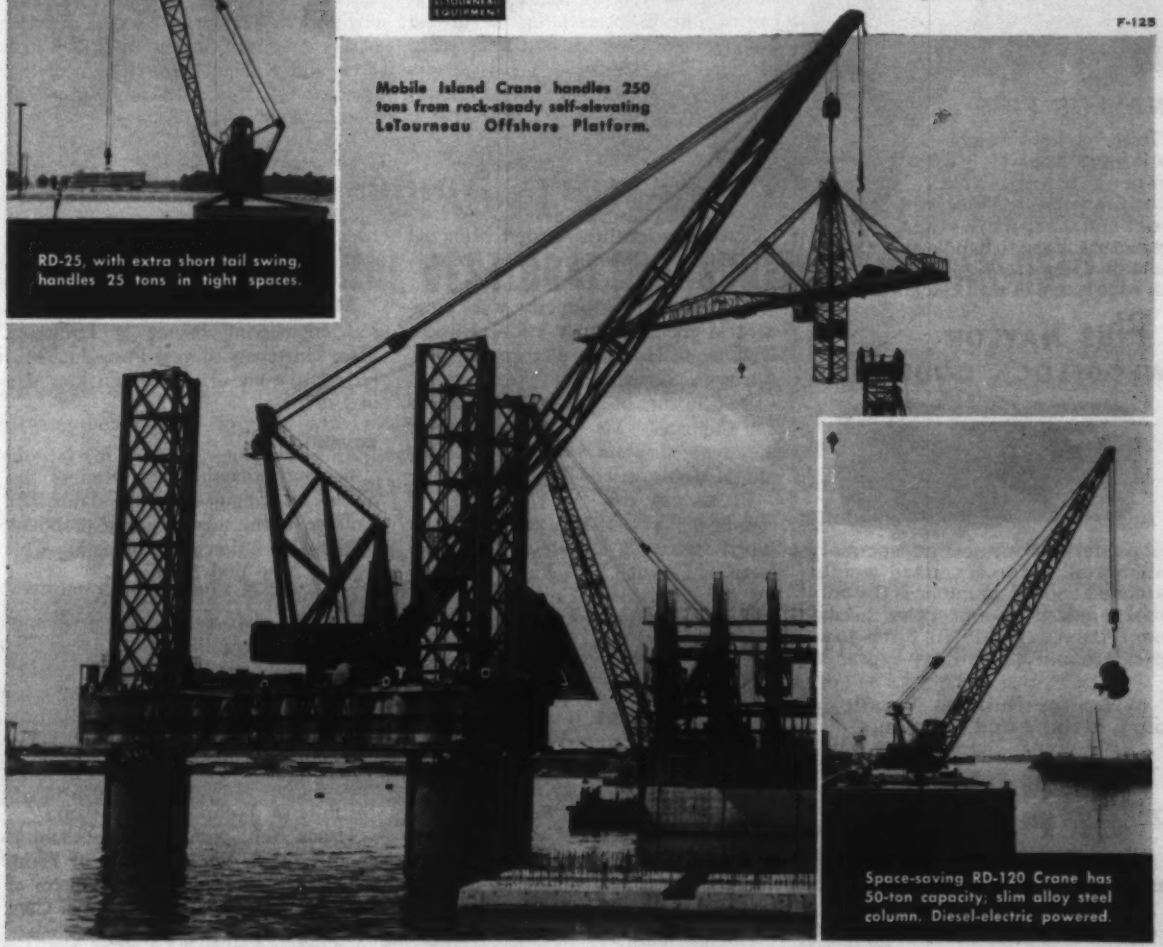
R. G. LETOURNEAU INC

2727 South MacArthur, Longview, Texas

F-125



RD-25, with extra short tail swing, handles 25 tons in tight spaces.



Mobile Island Crane handles 250 tons from rock-steady self-elevating LeTourneau Offshore Platform.

Space-saving RD-120 Crane has 50-ton capacity; slim alloy steel column. Diesel-electric powered.

RIGHT COMBINATION

St. Lawrence Engineer Retires

Otto Holden, chief engineer of the Ontario Hydro-Electric Power Commission, retired on July 15 after 47 years of service. He began as a draftsman after his graduation from the University of Toronto.

First placed in charge of hydraulic plant design in 1918, Mr. Holden has been intimately associated with all of the Commission's hydro developments. Completion of the St. Lawrence Power Project, on which he guided the design of the Canadian portion, marked a fitting climax to his career.

Other notable plants for which Mr. Holden was responsible were Des Joachims, Chenaux and Le Cave on the Ottawa River and the Sir Adam Beck-Niagara Generating Station No. 1, which was the largest in the world when it was completed. Just prior to the St. Lawrence, Mr. Holden was also in charge of the Sir Adam Beck-Niagara Generating Station No. 2 as well as the remedial works in the Niagara River carried out to protect the beauty of Niagara Falls. Over the past seven years, his work has centered on 10 hydro plants with a total capacity of 2,200,-500 hp.

Otto Holden

Chief hydraulic engineer in 1937, Mr. Holden became assistant general manager-engineering in 1947 and chief engineer in 1955. He is a past director of the American Society of Civil Engineers and a member for Canada of the Council of the Institution of Civil Engineers of Great Britain.

Fluor Corp. Names Coordinator

Two top executives, Ernest Moncrief and James P. Wiseman, have been reassigned at Fluor Corp., Ltd.

Mr. Moncrief, formerly vice president of the company's Mid-Continent Division in Houston, was appointed to the newly-created post of Vice President—Coordinator of Foreign Operations and Affiliates. Mr. Wiseman, former president of Fluor Products Co., has moved to Moncrief's former position.

In his new role, Mr. Moncrief will coordinate the activities of these Fluor subsidiaries and affiliates: The Fluor Corp. of Canada, Ltd.; Fluor Engineering & Construction Co., Ltd. of London; Fluor-Schuytvlot, N. V. of Haarlem, Holland; Singmaster & Breyer, Inc.; and H. G. Acres & Co., Ltd. He will operate from Fluor's headquarters in Los Angeles.

Mr. Moncrief joined the company in 1937 after graduation from California Institute of Technology, and held various positions in Fluor's Kansas City and Los Angeles offices. He was assigned to set up the Mid-Continent Division in 1948, and was instrumental in developing the division from an organization that did $3 million in sales in 1950 to over $20 million in 1959. He was named vice president of the corporation in 1952.

Mr. Wiseman, who won his mechanical engineering degree at Louisiana State University, joined Fluor in 1942. He became president of Fluor Products in 1955.

Education

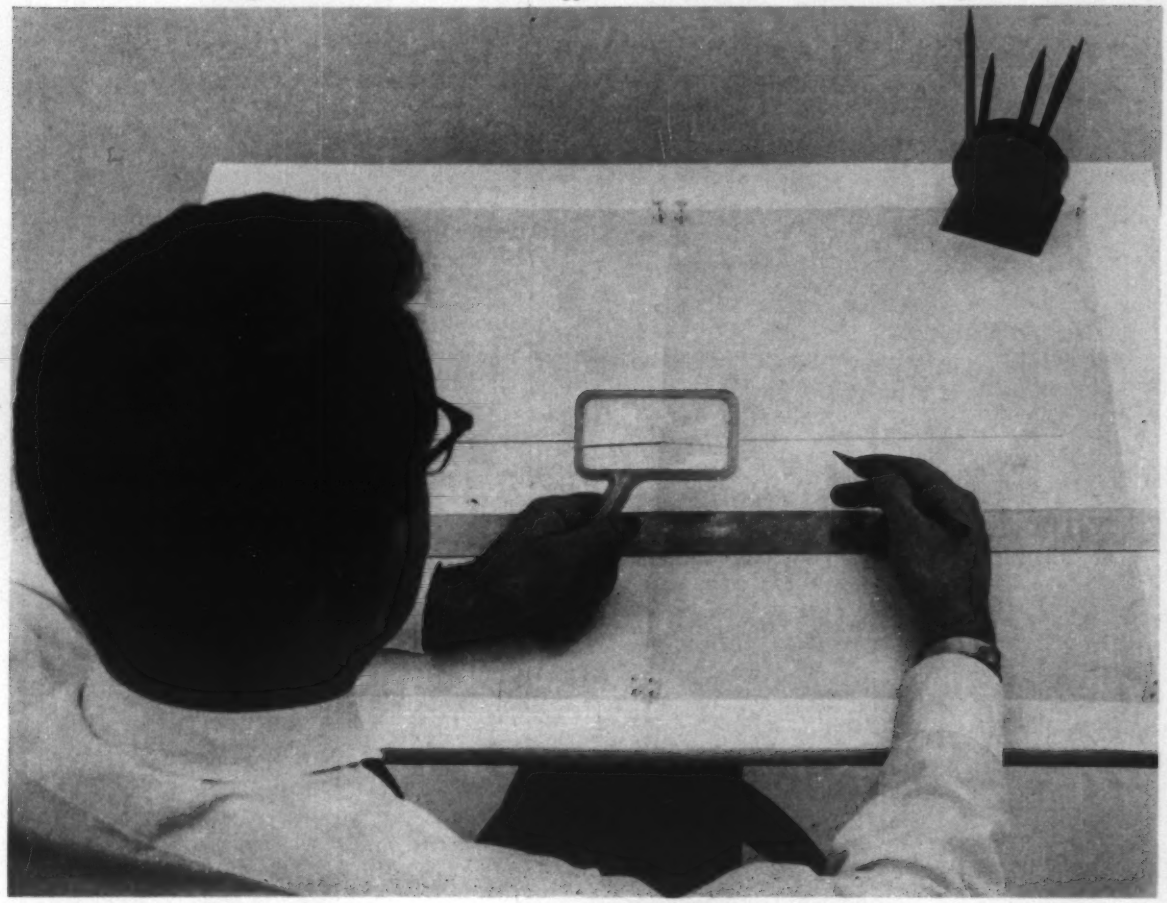
Brother Amandus Leo, dean of the School of Engineering at Manhattan College, is the newly elected president of the Association of Engineering Colleges of New York State.

Raymond A. Morgan, head of the University of Wyoming's departments of general engineering and engineering drawing, has been named assistant dean of the College of Engineering.

Mario J. Goglia has resigned as dean of the College of Engineering at the University of Notre Dame, to become associate dean of faculties at the Georgia Institute or Technology at Atlanta.

Hsuan Yeh, professor of mechanical engineering at the University of Pennsylvania, has been appointed director of the school's new Towne School of Civil and Mechanical Engineering.

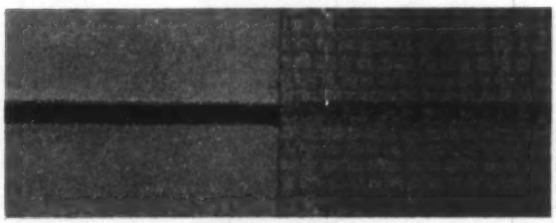
Simple Pencil Test Affords Dramatic Proof:



CRONAFLEX® HAS THE BEST DRAFTING SURFACE YOU CAN USE!

Here's an easy way to prove to yourself the superior draftability of CRONAFLEX: place a sheet of it on your drawing board, side by side with whatever drafting material you've been using. Now draft several lines on each. Erase and re-draft. Use your own tools, your own techniques.

Examine the lines you've drawn with a magnifying glass. Notice the difference in covering power, cleanness of erasures and line density—especially where lines have been re-drawn. You've just demonstrated three important reasons why CRONAFLEX is the best drafting film available: excellent *pencil acceptance*, outstanding *erasability* and good *re-drafting characteristics.*



Compare pencil acceptance of CRONAFLEX (left) with that of ordinary drafting material. Same pencil made both impressions! CRONAFLEX gives a faster, cleaner, lighter touch, too, because you don't have to bear down as you must with cloth.

CRONAFLEX has other advantages, as well. Its rugged "Cronar"* polyester base holds its size and resists kinking. It's .004" thick for easier, more efficient handling. Because CRONAFLEX is manufactured from start to finish by Du Pont, you're assured of consistent performance found in no other drafting film. To learn more, write: E. I. du Pont de Nemours & Co. (Inc.), Photo Products Department, Wilmington 98, Delaware.

*Du Pont's trademark for its polyester photographic film base.

DU PONT

BETTER THINGS FOR BETTER LIVING . . . *THROUGH CHEMISTRY*

From Alcoa . . . 12 handsome

Yes, you can add the striking new beauty of Alcoa* Alumalure finish—12 hues, including natural aluminum finish—*without adding premium cost!* Whether you're planning an industrial building, school, shopping or recreation center, warehouse, or some other type of structure . . . let your imagination *go* with Alumalure finish!

You won't be hampered by budget. Alcoa Aluminum is light in weight, strong, corrosion resistant—which means it goes up faster, handles easier, requires *no maintenance.* Covers more area faster, too, because it comes in sheets as large as 48 in. wide, 30 ft long. And it's available in corrugated, V-beam, ribbed or flat sheet. Will it *stay* beautiful? Alumalure, a tough, baked enamel finish on aluminum, already has passed the *15-year* mark in a rigorous test of durability!

Specify Alumalure finish by name . . . your assurance of the *finest* baked enamel finish, factory applied under rigid quality control. For samples, call your local Alcoa sales office. For color swatches and full technical data, write: Aluminum Company of America, 821-G Alcoa Building, Pittsburgh 19, Pa.

Obituaries

John B. Kelly Sr., 70, Philadelphia contractor who started a bricklaying company in 1919 and developed it into John B. Kelly, Inc., one of the largest contracting companies of its kind, with offices in Philadelphia, New York and Pittsburgh.

Charles C. Conklin, 60, retired construction manager of Stone & Webster Engineering Corp., New York City. He had been with Stone & Webster continuously from 1924 until his retirement in 1954.

Clinton B. Brown, 72, retired senior engineer for Ford, Bacon & Davis, Inc., New York City engineers. A mechanical engineer, Mr. Brown joined Otis Elevator Co. in 1908, and was with Worthington Pump & Machinery Co. from 1913 to 1917.

Huges Brussel, 82, St. Louis consulting engineer for more than half a century. He came from France in 1904 and stayed to pioneer in the use of reinforced concrete. He was the designer of the St. Louis Cathedral, the Mayfair, Lennox, and Forrest Park hotels, and McKinley High School in St. Louis.

Harry Hammond, 75, retired mechanical engineer and special representative to the oil and gas industries for National Tube Division of U. S. Steel in Pittsburgh. In that capacity he aided in developing the Big Inch pipeline and other oil and natural gas carriers.

Angus Burlingame MacMillan, 77, well known civil engineer and early user of reinforced concrete. He retired in 1956 as chairman of the board of Abernathaw Construction Co., of Boston.

Lester S. English, 64, vice president and chief engineer of Bethlehem Contracting Co., Bethlehem, Pa.

Frederick C. Fisk, 94, pioneer construction engineer in Buffalo, N. Y. He was responsible for the construction of 18 Lehigh Portland Cement Co. plants in this country and abroad.

James H. Graham, 81, dean of the University of Kentucky College of Engineering from 1935 to 1946. During World War I he organized Engineer Corps supply lines and docks overseas.

R. J. Bond, 80, president of the Sims Construction Co., Philadelphia. Prior to joining Sims in 1946, Mr. Bond was an executive for the Pennsylvania Railroad.

Cupert A. Wanless, 65, Head of the Department of General Engineering, Oregon State College.

(*Obituaries continued p. 66*)

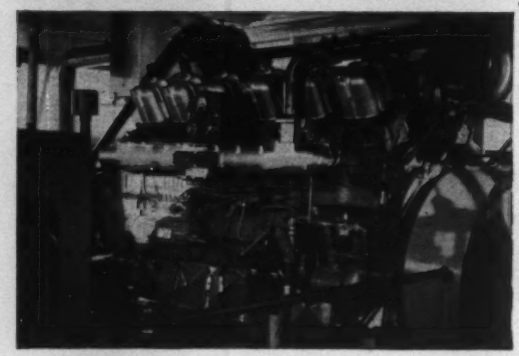
Marine Pipeliner No. 114 at work for contractor-owners Marine Pipeline & Dredging Co., Ltd., of Vancouver, B. C. This 16" suction dredge is 30' x 70' (without cutters and spuds), 5' deep, 2½' draft. Northern Engine & Eqpt. Co., Ltd., Vancouver, supplied its Waukesha Diesel.

WAUKESHA *powered*



Power plant of dredge is a WAUKESHA Model VLRDBS Turbocharged DIESEL—12-cylinder, 60° vee, four cycle, 8½ x 8½-in. bore and stroke, 5788 cu. in. displacement. An independent cooling system replaces fan. About 1100 hp is applied on actual drive. Estimated capacity of V-belt driven pump is 456 cu. yds. per hour.

Working on a water-crossing of a gas pipe line in the Fraser River, British Columbia, as shown here . . . dredging on excavation for bridge piers . . . pipeline pumping of sand directly on road grade . . . or stock-piling river-sand—the Waukesha-Diesel-powered 16-inch suction dredge *Marine Pipeliner No. 114* has the capacity, speed and flexibility to handle the job. And it's portable, too—built on six pontoons, quickly disassembled for shipping on flat cars anywhere there's a job for the Marine Pipeline & Dredging Co., Ltd. They have three other portable dredges—all of them Waukesha-Engine-powered. Contractors appreciate the simplicity, dependability, and fuel and maintenance economy of the big, powerful Waukesha V-12 Turbocharged Diesel. *Send for Bulletin 1663.*

. . . Obituaries

E. M. Van Norden, 84, former assistant to the vice president of the Consolidated Edison Co. of New York. He graduated from the Polytechnic Institute of Brooklyn in 1897 and joined Consolidated Edison soon after. He progressed in the company from clerk to mechanical engineer in charge of all power-plant design and construction, a position he held at the time of his retirement in 1943.

Jesse R. Glaeser, 59, vice president and chief engineer of Perini Corp., Framingham, Mass. A specialist in underground construction, he supervised construction of powerhouses, caissons and some of the largest and longest tunnels in the world. Mr. Glaeser was a member of the Moles, an eastern organization of heavy construction men, and of the Beavers on the West Coast.

L. M. Franklin, 85, retired partner of York & Sawyer, New York City architects. He was instrumental in planning the Allegheny General Hospital in Pittsburgh and Roosevelt Hospital in New York among others.

Albert C. Martin, 80, Los Angeles architect and engineer and founder of the firm Albert C. Martin & Associates. He designed many notable buildings in Los Angeles and vicinity, including Los Angeles City Hall.

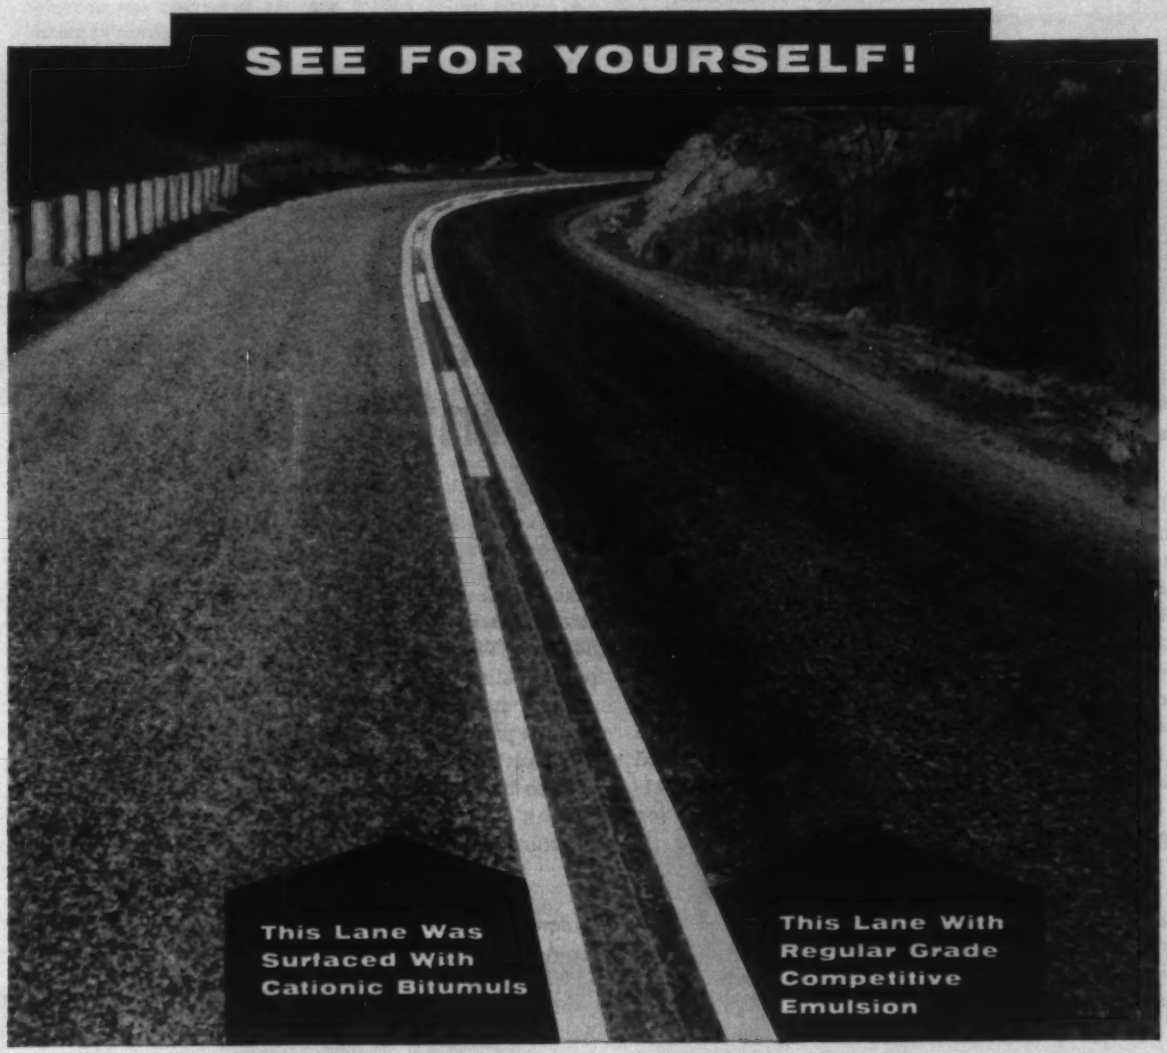
John M. Davis, 69, president of LaSalle Construction Co., Chicago. He directed the construction of many outstanding buildings, among them being the Palmolive Building, Chicago, the Cleveland Public Library and the North Dakota State Capitol at Bismark.

Gunnar E. Soderberg, 77, retired Akron, O., City Engineer who served previously in the Akron highway department from 1918 to 1948.

Harrison Walters, 82, Indianapolis civil engineer and contractor. He was president of Walters Engineering Co. and later consulting engineer with Russell B. Moore Co. Mr. Walters also founded and was first president of the Indiana Society of Civil Engineers.

Francis Wakem, 63, retired vice president of industrial production of Johns-Manville Corp. of New York City. He had been with Johns-Manville for 36 years. During World War II, he served on two war production boards as member of advisory committees.

Francis W. Collins, 81, consulting engineer and former president of the Ridgefield Water Supply Co. in Connecticut.



You Get BETTER Surface Treatments With CATIONIC BITUMULS

This photograph gives visible proof of the superior performance of Cationic Bitumuls. The picture was taken on a 25-mile test section of highway in North Carolina.

Based on the success of this job, Cationic Bitumuls is being used for extensive surface treatment work throughout the State during the current construction season.

In every test made to date—whether in laboratory or field—Cationic Bitumuls has shown two outstanding qualities:

1. Unusual ability to hold aggregate, even "difficult" types.
2. Rapid initial set that minimizes damage from early rainfall.

If you haven't tried this new material, call our nearest office today and arrange to test Cationic Bitumuls on your next pavement construction or maintenance job.

LOOK WHAT THEY'RE DOING WITH DEEP STRENGTH ASPHALT PAVEMENTS IN WESTERN KANSAS!

To withstand heavy traffic,
sizzling heat, numbing cold...

11-inch sand-Asphalt base is chosen for Kansas Interstate 70

Traffic will soon be rolling on a new DEEP STRENGTH Asphalt pavement section of Interstate 70 in Trego County, Western Kansas. In this part of the country, temperatures range from a numbing 20 below zero in winter, to sizzling 115°F in summer; winds sometimes reach hurricane force.

To meet the demands of expected heavy traffic and extreme weather, Kansas Highway Commission Engineers chose DEEP STRENGTH Asphalt pavement. Notice construction and cross-section (below). See how precepts of the new DEEP STRENGTH Asphalt design are incorporated . . . heavy-duty, **full width** Asphalt Concrete surface . . . **11-inch heavy-duty, sand-Asphalt base** . . . heavy compaction . . . good drainage. Here is strength and durability!

Minimum Maintenance

When built like this—for DEEP STRENGTH—Kansas experience has shown that Asphalt pavement will carry the heaviest traffic loads *without* distress and *with minimum maintenance.*

Make Best Use of Road-building Dollars

Like many other states, Kansas is finding that when Interstate highways are built with Advanced Design DEEP STRENGTH Asphalt pavements, the best use is made of road-building funds. For the Advanced Design Criteria for Asphalt pavements often save money over the cost of Asphalt pavement designed to other standards. The reason is the Advanced Design Criteria permit inexpensive Asphalt base to be substituted, within limits, for more expensive Asphalt concrete surfacing, and allow reduction in total structure thickness when used in place of untreated base.

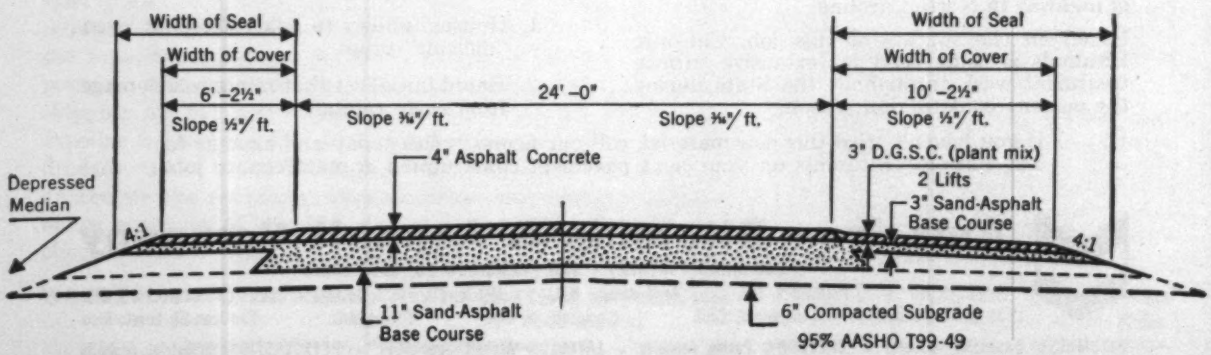
New Handbook

A new edition of the *Asphalt Handbook* incorporating all the Advanced Design Criteria implied by the term DEEP STRENGTH Asphalt pavement is now available at the Asphalt Institute office serving your area.

THE ASPHALT INSTITUTE

ASPHALT INSTITUTE BUILDING, COLLEGE PARK, MARYLAND

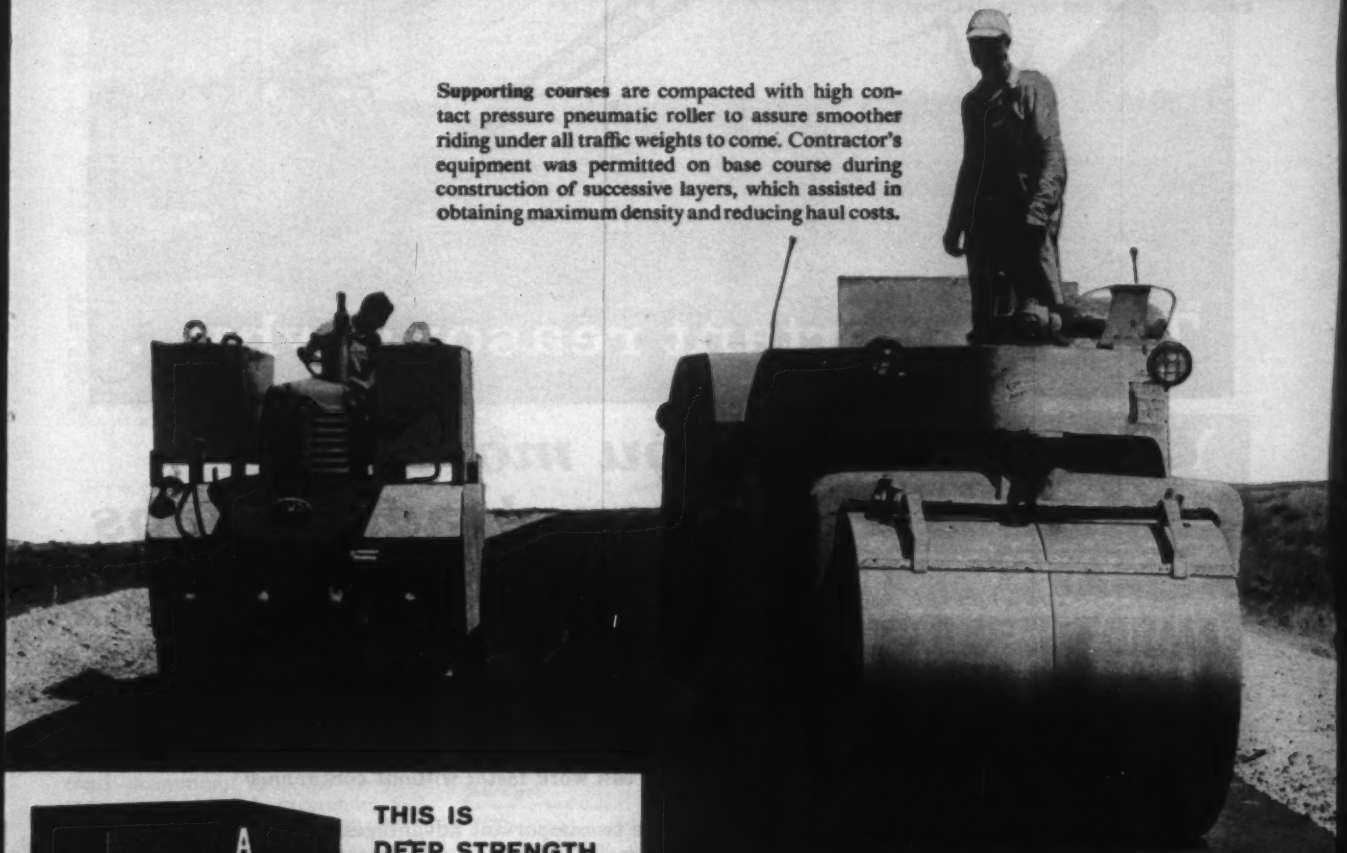
TYPICAL PAVING SECTION



Subgrade was compacted and fine graded before road-mixing of sand-Asphalt base.

Local sand shaped in windrow, bladed to reduce moisture to less than 1%, reshaped into windrow, mixed with Asphalt through traveling mixer—aerated and compacted.

Supporting courses are compacted with high contact pressure pneumatic roller to assure smoother riding under all traffic weights to come. Contractor's equipment was permitted on base course during construction of successive layers, which assisted in obtaining maximum density and reducing haul costs.



THIS IS DEEP STRENGTH CONSTRUCTION

UNIT gives you more Earning Power on dragline jobs

You'll find two essentials of profitable dragline service combined in a UNIT — speedy operating cycles, through full use of power, and outstanding stability. You save power and gain speed with UNIT direct-in-line drive from engine to main machinery. Power is transmitted through a worm drive with minimum loss due to friction. This is one of many UNIT built-in values that pay off in greater job output.

UNIT extra long crawlers and wider axles and shoes provide perfect balance, too. Stability is superior . . . you can work faster without continuous tipping on long or low boom work.

A UNIT DRAGLINE gives you these two important advantages . . . and many more. You get a one-piece cast main machinery gear case with all gears, shafts, and bearings operating in an oil bath; automatic traction brakes; twin hook rollers; and all disc-type operating clutches.

Your UNIT dealer has full information on ½ to ¾-yd. draglines, fully convertible to other front ends. See him soon for the full UNIT story.

Wide Spread in Big Bend Reservoir Bids

First stage earthwork on the Big Bend Reservoir project, a multipurpose dam near Ft. Thompson, Chamberlain, S. D., involves about 6,500,000 cu yd of embankment, 1,250,000 cu yd of chalk excavation, 5,200,000 cu yd of overburden and shale excavation, 500,000 cu yd of dredged fill, 600,000 cu yd of muck removal, and 30,000 cu yd of riprap.

The Corps of Engineers, Omaha, Neb., awarded the contract at $3,043,278, to Western Contracting Co., Sioux City, Ia. The award was 11.5% under the engineer estimate, 49% under the high bid, and almost 45% under the second high of the seven bids.

The government furnishes 404 lin ft of 72x44 in. CMP arch culvert pipe.

Minimum wages include: carpenter, $2.75; crane & power shovel operator, $3.35; tractor operator, $2.85; common laborer, $1.63.

The bidding included:

1C Western Contr. Corp., Sioux City, Iowa	$3,043,278
2 J. H. Beckman Constr. Co., Sioux Falls, South Dakota	3,382,449
7 Kaiser Engrs. & Constrs., Inc., Oakland, Calif.	5,994,617
EE Corps of Engineers, Omaha, Neb	3,438,237

CYANAMID'S EXPLOSIVES ENGINEER HELPS YOU ON THE JOB!

By delivering the goods on time!

To make sure rock work keeps on schedule, Cyanamid's explosives engineer sees to it that explosives arrive where you need 'em, when you need 'em!

He plans delivery for maximum safety and calls on Cyanamid's national network of plants and magazines to assure prompt delivery.

To further expedite delivery, your order is frequently stored ahead of time in a nearby distributing magazine. For large jobs, plant orders are made up in advance and held for shipment.

Current magazines include:

Belleville, Ill.; Berlin, Pa.; Brazil, Ind.; Denver, Colo.; Foster, Ohio; Great Bend, Kans.; Latrobe, Pa.; Odessa, Texas; Oklahoma City, Okla.; Riverton, Wyo.; Roundup, Mont.; Salt Lake City, Utah; Tulsa, Okla.

Don't forget Cyanamid's job-winning *Pre-Bid Service!*

By conducting a careful pre-bid investigation, Cyanamid's explosives engineer offers contractors valuable assistance in estimating hard-rock blasting costs. Next time you bid on a hard-rock job, let an experienced Cyanamid explosives engineer help you *get* and *do* the job!

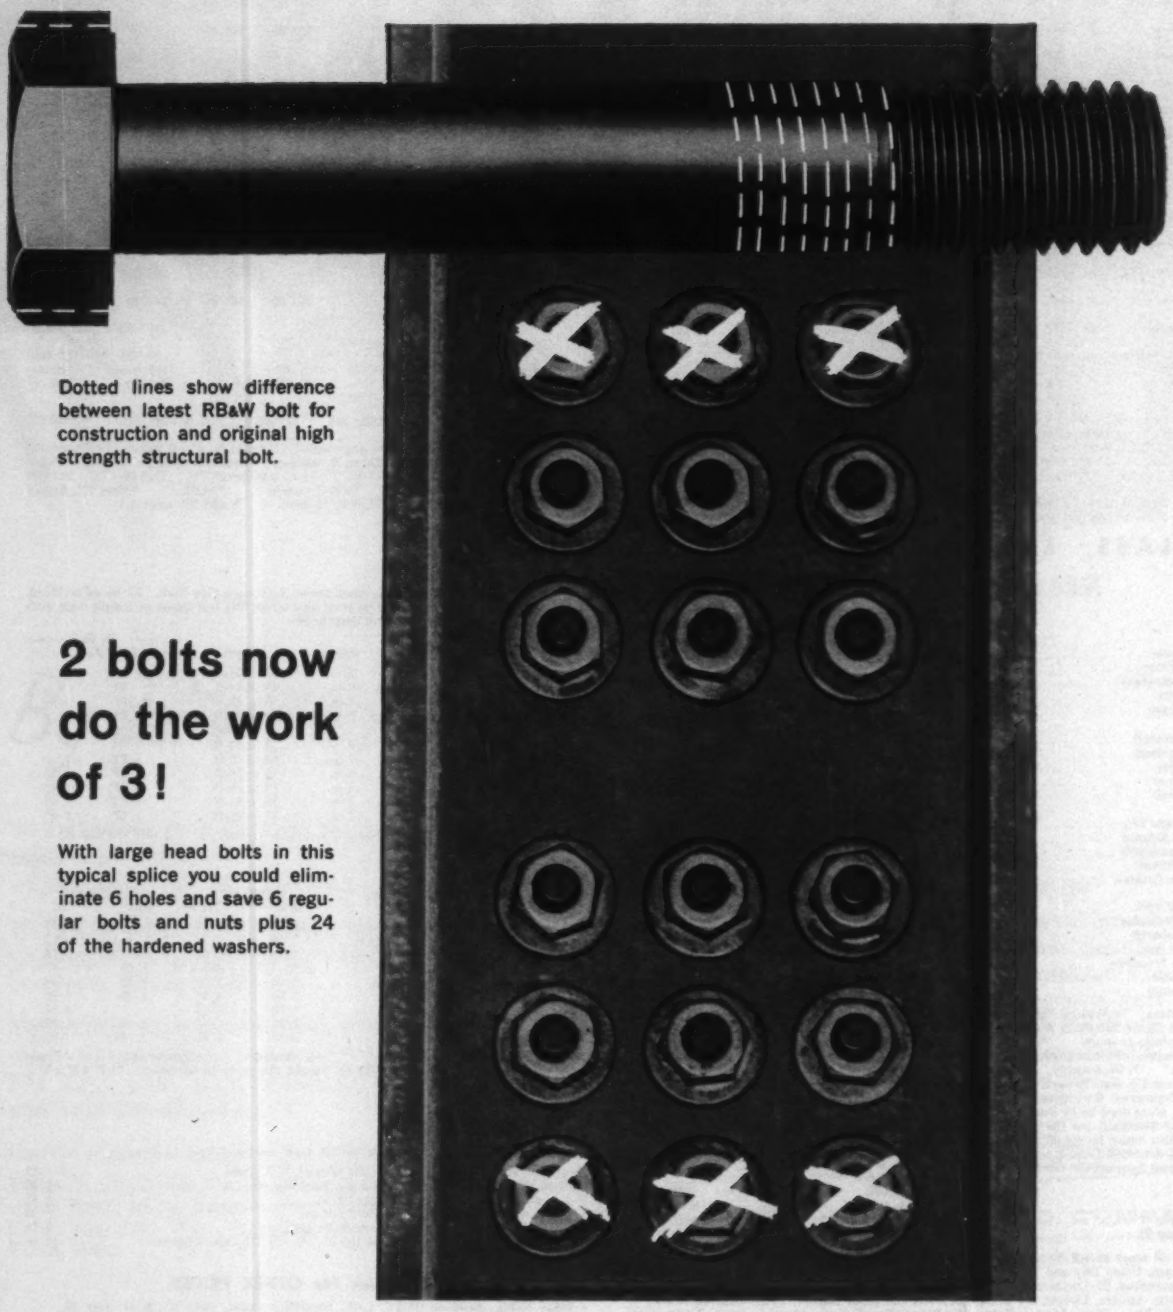
NEW approved RB&W save you 40%



Dotted lines show difference between latest RB&W bolt for construction and original high strength structural bolt.

2 bolts now do the work of 3!

With large head bolts in this typical splice you could eliminate 6 holes and save 6 regular bolts and nuts plus 24 of the hardened washers.

LARGEST INDEPENDENT PRODUCER OF

High Strength Bolts in bearing connections

- **New, shorter thread length increases allowable shear strength--permits 2 bolts to replace 3 rivets**
- **Heavy head design eliminates one of the two washers**
- **Fully tested and approved by AISC and Research Council on Riveted and Bolted Structural Joints**

Plants at: Port Chester, N.Y.; Coraopolis, Pa.; Rock Falls, Ill.; Los Angeles, Calif. Additional sales offices at: Ardmore (Phila.), Pa.; Pittsburgh; Detroit; Chicago; Dallas; San Francisco. Sales agents at: Cleveland; Milwaukee; New Orleans; Denver, Fargo.

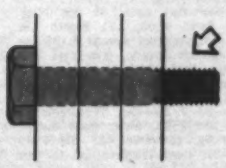
HERE'S the next big advance in structural steel connections. RB&W High Strength Bolts with new head and thread design are now ready to take another big bite out of construction costs.

Erectors will save on total fastening time and material costs. Shop fabricators will turn out tonnage faster than ever before, cut the cost of fabricated steel to a new competitive level. Designers will be able to reduce the number of holes at joints and still get specified total shear strength.

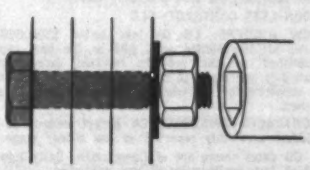
With new large head, this bolt ends need for one of the two hardened washers. With shorter thread length, it excludes threaded section from shear plane in connections, enabling tensile/shear ratio to be changed to 1 :1.1 from the former 1 :0.75. This means that instead of using one bolt for one rivet, you can use two new bolts where you would need three rivets or three regular high strength bolts.

RB&W is proud of its significant contribution to this engineering breakthrough—one which has been extensively tested, and approved by the appropriate bodies.

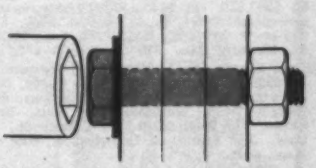
Once again you see solid evidence that the strongest (and clearly the most economical) fasteners for structural joints are high strength bolts. For the best of such bolts, specify RB&W. You get full conformance to ASTM A 325, and *certified* quality. For more data, contact Russell, Burdsall & Ward Bolt and Nut Company, Port Chester, N.Y.



NO THREAD IN SHEAR PLANE of joint. This increases effective shear area of bolt, allows higher working stresses, so that 1/3 fewer bolts provide specified design strength in bearing-type joint.



ELIMINATE 50% OF WASHERS at the least. Large head gives adequate bearing area to prevent crushing of seat. Washer now goes only under nut or bolt head, whichever is rotated in wrenching.



EASY, FAST INSTALLATION. With standard holes 1/16″ oversize, bolts can be inserted by hand even when holes are misaligned 1/16″. Reaming is virtually eliminated. Now tighten from head or nut—with same wrench.

HIGH STRENGTH BOLTS FOR CONSTRUCTION

PROJECTS COVERED

By Size

Construction projects here reported cover the United States and Canada, are of these minimum sizes or larger: water supply, earthwork, waterways $53,000; other public works $88,000; Industrial buildings $110,000; other buildings $400,000. Also Foreign projects of $1,000,000 and more in size of Interest to American contractors.

By Regions & Classes of Construction

(In order of Listing)

BIDS ASKED
LOW BIDDERS
CONTRACTS AWARDED

New England	Middle West
Middle Atlantic	West of Mississippi
South	Far West

PROPOSED WORK

Water Supply	Public Buildings
Sewers, Waste Disposal	Mass Housing
Bridges	Commercial Buildings
Streets & Roads	Industrial Buildings
Earthwork, Waterways	Unclassified

In These Stages

PROPOSED WORK: Before and including appointment of engineers or architects.
BIDS ASKED: BA (new announcements only). For full calendar, see also preceding issues.
SOON LETS CONTRACT: SLC
LOW BIDDERS: LB On jobs below $500,000 in value all low bidder news will be the final reports published on the projects involved except where award is not made to the low bidder. In this case, a supplementary contract award report will be published.
CONTRACTS AWARDED: CA Except awards to low bidders previously reported in low bidder stage.
CD dates shown are of Construction Daily Issue in which last previous report was published.
OWNERS, ENGINEERS, ARCHITECTS, CONTRACTORS are invited to report their new jobs for listing in these reports when they meet or exceed the size minimums shown above. Address these news releases to J. A. Mahoney, REPORTS, ENGINEERING NEWS-RECORD, 330 W. 42 St., New York 36, N. Y.

try Retrievable Miniaturization for size in your reproduction department!

THE IDEA. Retrievable Miniaturization is a new ingenious method for reducing the size of prints yet keeping them large enough to be completely readable and usable. Developed by Paragon-Revolute, this method is acknowledged as one of the significant advancements in reproduction.

HOW IT WORKS. In Paragon-Revolute's unique Continuous Reducing Printer and Processor, reduced-size transparencies are made from original drawings for immediate reproduction in blueprint or diazoprint equipment. Reductions can be made as positives or negatives on paper or film. The Printer takes drawings up to 42" wide by any length at speeds up to 30 fpm.

THE ADVANTAGES. Retrievable Miniaturization fits in with existing facilities, calls for no drastic changes in present drafting standards or printmaking systems. It enables savings in materials up to 300% . . . increases capacity of blueprint or diazo-type equipment up to 4 times . . . slashes print handling time, filing space, and mailing costs. Most importantly, it provides readable, usable reduced-size prints without the problems and high cost of blow-back systems.

You owe it to yourself and your company to investigate the advantages and savings offered by this great new concept in reproduction. Use the coupon to get more information or to arrange for demonstration.

The Paragon-Revolute Continuous Reducing Printer is the heart of Retrievable Miniaturization. Really a giant movie camera, it takes pictures of drawings while they move through the machine at speeds variable from 3 fpm to 30 fpm. Camera feeds as easily as blueprint and whiteprint machines.

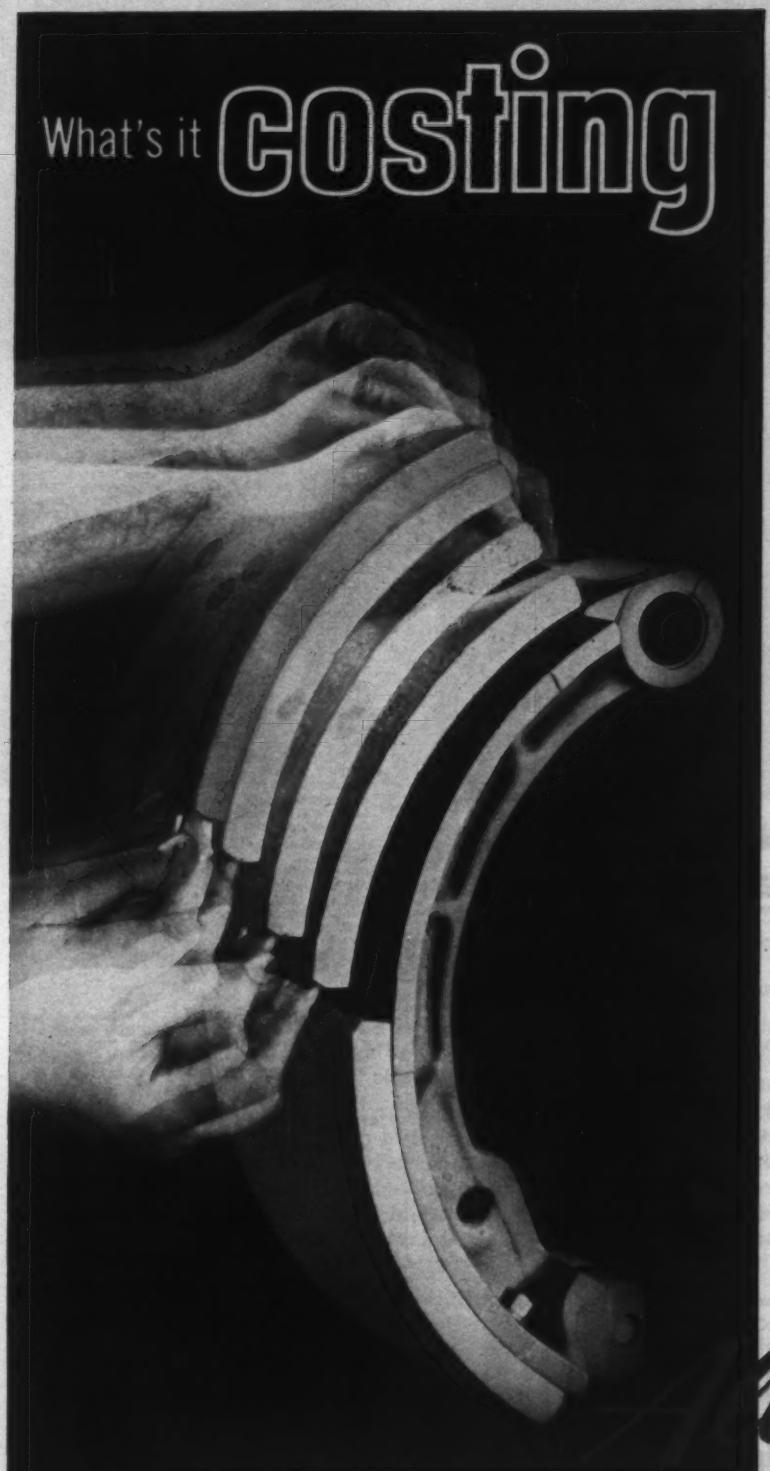
What's it costing you to reline brakes?



Want to save the $1,000 *or more* brake jobs can cost you in a year? TORQMATIC DRIVE owners will tell you it's automatic with the built-in retarder, which also provides the added safety of another braking system.

For this optional TORQMATIC DRIVE feature saves service brakes for everything but full stops. Naturally linings last far longer... downgrade runs are safer.

TORQMATIC owners also report saving up to $2,000 every time they train a new driver... eliminating one engine overhaul out of three... wiping out engine-disconnect clutch costs.

Pays for itself in savings alone

Sure you'll pay more for TORQMATIC – but you quickly get your money back in repair savings. And TORQMATIC also speeds job cycles– there's no need to slow down for shifts.

More and more operators are ridding themselves of their clashbox-caused expenses by switching to TORQMATIC. It's been proved on years of tough jobs. Details? See your dealer or write Allison.

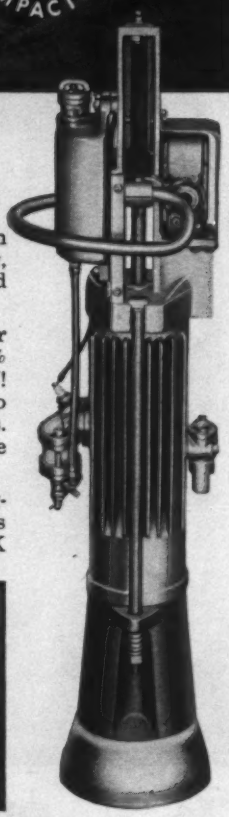
THE MODERN DRIVE FOR MODERN EQUIPMENT

ON ROAD WORK–

Tamping fill around 4 ft. concrete pipe culvert on New York State Thruway Extension near West Seneca, N.Y. The Barco Rammers are owned by S. J. Groves & Sons Co., Syracuse, N.Y.
(Photo: CONSTRUCTIONEER)

Barco Rammers are Essential



CHECK THE RECORDS for *soil compaction* on every top ranking highway, toll road, thruway, or freeway built in recent years and you will find Barco Rammers!

Easily meet rigid specifications—In test after test, Barco Rammers have delivered 95% to 97.5% compaction (modified Proctor Method)—EASILY! EFFICIENTLY! ECONOMICALLY! The Barco Rammer is especially useful in restricted areas. ONLY Barco can produce specified high degree compaction on lifts up to 20 inches.

Get jobs finished on time—One of the biggest advantages offered by Barco Rammers is ability to handle work in minimum time. ASK FOR A DEMONSTRATION.

FREE book tells how to reduce construction costs with USS Granulated Blast Furnace Slag

This is the story of the most versatile kind of slag—Granulated Blast Furnace Slag—and how it is being used to reduce costs in various types of construction.

Granulated slag is produced in angular particles by rapid quenching of molten slag in water. It is unsurpassed as a subbase material for concrete and bituminous highways, airport runways and as a base course material for primary and secondary roads. It is also widely used for embankments where stability is essential.

Substantial tonnages go into the manufacture of cement and concrete masonry units and as aggregate for lightweight concrete. Additional uses of granulated slag as a raw material in manufacturing *Chemicals*, *Coatings*, *Ceramics*, *Paints* and entirely new products are currently being developed.

Money saving advantages. This versatile material may be used without further processing, special know-how or special equipment. It is easy to handle and provides excellent insulating and load-bearing capacities with good drainage, thus reducing construction and maintenance costs. "Pumping" of subsoil under repeated loads is eliminated.

The new United States Steel booklet, "USS Granulated Blast Furnace Slag," gives complete information. *Write for a copy.*

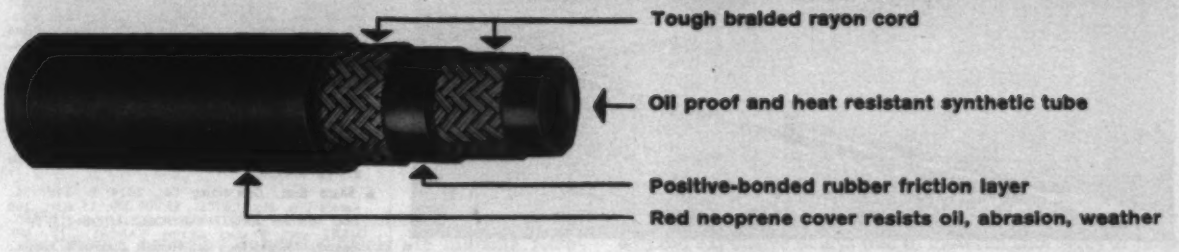
The hose that wears like a truck tire!



Tough braided rayon cord
Oil proof and heat resistant synthetic tube
Positive-bonded rubber friction layer
Red neoprene cover resists oil, abrasion, weather

Work like this is rough on hose, but Thermoid-Quaker "Versicon" takes it in stride. "Versicon" hose is built for high air pressures, up to 300 psi. It's built to withstand dragging over jagged, abrasive rock. It resists oil, baking sun or freezing cold. It's the heavy gauge, tough neoprene cover that takes this kind of surface abuse.

The tough braided rayon reinforcement gives it the extra strength to withstand high working pressures.

The tube is a specially compounded synthetic that's oil proof, heat resistant and will not flake or chip.

"Versicon" is made in all sizes up to 1½" and in lengths up to 500′ in some sizes. Also in one, two or three braid constructions for use with water, oil, grease, solvents, sprays and mild chemical solutions.

See your experienced Thermoid Division Distributor for the right hose for your requirements, or write: *Thermoid Division, H. K. Porter Company, Inc., 200 Whitehead Road, Trenton 6, N. J.*

THERMOID DIVISION PORTER **H.K. PORTER COMPANY, INC.**

PORTER SERVES INDUSTRY with steel, rubber and friction products, asbestos textiles, high voltage electrical equipment, electrical wire and cable, wiring systems, motors, fans, blowers, specialty alloys, paints, refractories, tools, forgings and pipe fittings, roll formings and stampings, wire rope and strand.

THE IROQUOIS DAM...AN S&H FOUNDATION INVESTIGATION & PRESSURE GROUTING PROJECT

Thousands of feet of drilling and sampling were performed for the initial planning of the Iroquois Dam (St. Lawrence Seaway). The accurate soil samples and high quality rock cores recovered contributed materially to the design of a suitable and firm foundation.

In the second phase of our work on the Iroquois Dam we drilled the necessary grout-holes and performed the pressure grouting. Completely sealing off the cavities that our drilling revealed required the injection of over 10,000 cu. ft. of cement grout.

Sprague & Henwood's unbeatable combination of experienced drilling and grouting personnel, modern equipment and expert supervision is your assurance of the satisfactory completion of your work.

For the foundation investigation and pressure grouting required for tunnels, buildings, dams, bridges, or highways, contact the Sprague & Henwood branch nearest you.

Beckler River Bridge
Snoqualmie National
Forest

No Maintenance Problems Here...it's REINFORCED CONCRETE

Beckler River Bridge, Snoqualmie National Forest, Oregon
Designers: U. S. Department of Commerce, Bureau of Public Roads
for U. S. Forest Service
Contractor: David Nygren, Seattle, Washington

With continuously rising costs plaguing our highway departments, economy minded officials are utilizing Reinforced Concrete for the construction of maintenance-free highway structures. Reinforced Concrete structures are resistant to the effects of extreme weather and temperature change, wind, shock, and quakes—never require painting or other refurbishment.

They are lower in first costs, too! Reinforced Concrete highway projects start on time and finish on schedule without expensive delays due to material shortages or field changes. And, all materials and labor are readily available from local sources.

If rising maintenance and construction costs are delaying your highway projects, design your structures for Reinforced Concrete and enjoy its many costsaving and timesaving advantages.

Concrete Reinforcing Steel Institute

HOW TO RUB or GRIND CONCRETE

Today, more and more builders specify a fine finish for concrete walls and ceilings. Because of this new requirement, and of the time and expense involved for hand finishing large areas, Stow Manufacturing Company has developed two, easily portable flexible shaft grinders for finishing concrete. These grinders are electrically powered.

Two methods are used to smooth off hardened concrete: wet rubbing and dry grinding. Wet rubbing — required for smoothing green concrete to a plaster like finish. Use slow speed grinding wheel or disc. Apply water while grinding. Wet concrete can also be painted on with a brush, then smoothed into holes with a grinding wheel. Dry Grinding—use a high speed grinding wheel or abrasive disc to smooth dry concrete.

Either of Stow's portable electric grinders, the ¼ HP model G40-C or the ¾ HP model JT-50, can be used for wet or dry grinding. Both models are available with open or totally enclosed motors, and are equipped with 8 or 12-ft. flexible shafts. Angle heads with different speed ratios can be selected. Write for STOW's pamphlet, Grinding Concrete, for complete information on proper speeds, grinding discs and wheels for both wet and dry concrete finishing. Stow Manufacturing Co., Binghamton, N. Y., also makes a complete line of concrete vibrators, rotary trowels, and screeds.

THE CECO SYSTEM WORKS 2 WAYS . . . FRAMES FLOORS—CARRIES UNDERFLOOR ELECTRIFICATION

Buildings to be truly modern need underfloor electrification . . . on that everyone agrees. And when a system serves a double purpose it's worth investigating. So look into the Ceco Electro-Channel Steel Joist System which carries both the electrical and structural loads. With the savings inherent in steel joist construction, underfloor electrification is now practical for almost any new building, large or small. Send for facts. Ceco Steel Products Corporation. Sales offices, warehouses and fabricating plants in principal cities. General offices: 5601 West 26th Street, Chicago 50, Illinois.

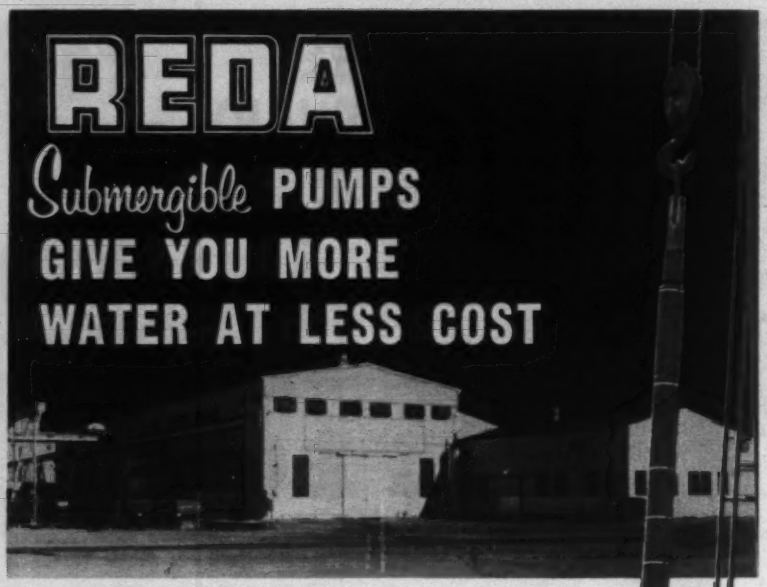
REDA

Submergible PUMPS GIVE YOU MORE WATER AT LESS COST



A complete line of models from ⅓ to over 500 H.P. provide capacities from 5 to over 1,000 gpm for wells as deep as 10,000 feet. As there are no belts, drive shafts, and no special piping is required, installation is easier and less expensive. Reda Pump Operating costs are low with little or no maintenance. Power costs are approximately 1¢ per KWH per horsepower and even lower.

Over 100,000 Reda installations for farms, ranches, industries, municipalities, etc. attest to the confidence users place in the ability of Reda Submergible Pumps to give them economical dependable water supply.

Write for Bulletin R-432. . .Complete information will be promptly furnished.

This photograph vividly demonstrates the excellent resistance of AMERICAN DUCTILE IRON® pipe to impact. After receiving the full force of a 3½-ton weight being dropped from a height of 25 feet, the pipe remains in one piece. The clearly defined puncture caused by the tip of the weight is an indication of the superior strength and impact resistant qualities of AMERICAN DUCTILE IRON ® pipe.

3½-TON WEIGHT DROPPED FROM 25 FEET FAILS TO SHATTER AMERICAN DUCTILE IRON® PIPE

Super-service requirements such as high internal gas pressures, heavy crushing loads and extreme shock loads can be met with extra-tough, bottle-tight AMERICAN DUCTILE IRON ® pipe. This pipe offers important advantages of both iron and steel, possessing the time-proven corrosion resistance of gray cast iron without the expense and inconvenience of special wrappings or special protective devices... and yet having high strength to withstand extreme installation and service stresses.

In crossing busy highways, under deep covers and fills, where shifting soil or earth settlement may be encountered... specify AMERICAN DUCTILE IRON ® pipe for gas service.

AMERICAN DUCTILE IRON ® pipe provides extra safety factors for all standard distribution pressures ... is easy to tap without saddles or welding... withstands shock in shipment, in installation, in service.

If you expect the extreme conditions, investigate AMERICAN DUCTILE IRON ® pipe. Your nearby American Cast Iron Pipe Company representative will furnish complete facts. Write for illustrated catalog.

Now the Bruning Man brings you the Whiteprinter that GIVES YOU THE MOST ...THEN OFFERS MORE!

It's Bruning's Great New Versatile Model 600!

It gives you the most! And we'll just mention the 42" printing width, 5,000 watt lamp, automatic separation, and 75 fpm speed range. But consider such built-in extras as: a feeder-band system for extra speed and assured print protection, dual air filtering for cleaner and sharper prints, pressure-roller developer system for instant and positive development at all times, split-shade lamp control for simultaneous running of two different materials.

It offers you more! Now take your choice, to suit your needs and budget, of these options: a 7,500-5,000 watt lamp with selector switch, a 4-way tracing tray, an automatic level-keeping developer pump, a deluxe feedboard unit complete with vacuum ports, swing-out rods for roll stock, non-sag paper cutter, drawer, even an ash tray.

If you can't beat it, why not join the "600." It's easy with Bruning's Lease-Purchase plan. Call your nearby Bruning Man, or mail coupon for a prompt reply.

MADSEN
MODEL 481 5000-LB. PLANT

Figures like these tell a story.

They indicate the tremendous output of the MADSEN Model 481 5000-lb. Asphalt Plant over a period of months on various Federal and State Specification mixes... the kind of day-in and day-out tonnage that builds owner profits.

They tell of the easy, low-cost maintenance and economical operation of the MADSEN Model 481. (Downtime in the 9 months period was only 12 hours.)

They show how the unit construction of the MADSEN Model 481 pays off in ease of portability and fast, easy set up and dismantling.

And most important, they show that the MADSEN Model 481 Asphalt Plant gives you the advantages you need to make greater profits in today's fast-moving asphalt mixing business. Check with your MADSEN Distributor today.

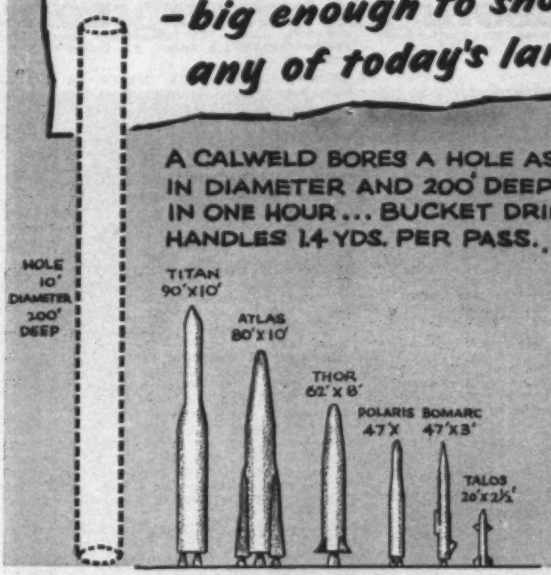
CALWELD digs a big hole!

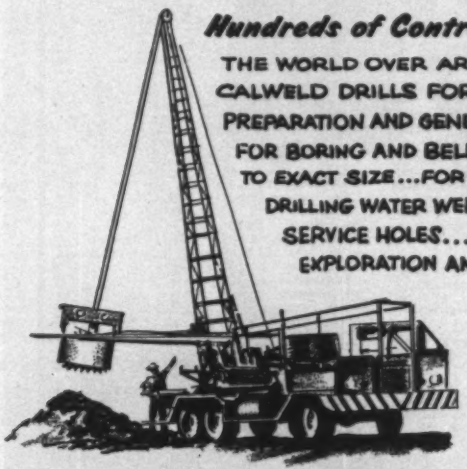
-big enough to shotgun launch any of today's largest missiles!

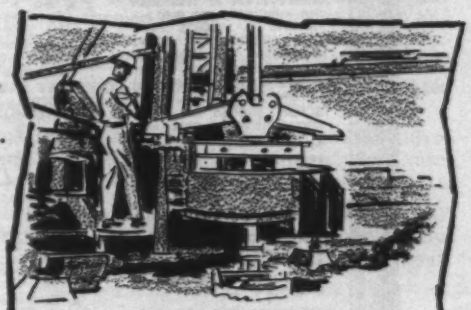
A CALWELD BORES A HOLE AS BIG AS 10' IN DIAMETER AND 200' DEEP! DIGS 45' DEEP IN ONE HOUR... BUCKET DRILL HANDLES 1.4 YDS. PER PASS.



Hundreds of Contractors

THE WORLD OVER ARE USING CALWELD DRILLS FOR FOUNDATION PREPARATION AND GENERAL EXCAVATING... FOR BORING AND BELLING CAISSONS TO EXACT SIZE...FOR DIGGING MANHOLES... DRILLING WATER WELLS AND OIL WELL SERVICE HOLES... FOR DRILLING EXPLORATION AND TEST HOLES.





CALWELD DRILLS ARE NOW CRAWLER MOUNTED FOR EASY MANEUVERABILITY IN ROUGH TERRAIN. USING THE KELLY BAR CROWD THEY EXERT A 50,000 LB. DRILLING PRESSURE AND PROVIDE 50,000 LB. PULLING POWER FOR PULLING CASINGS (USES HOIST AND CROWD HYDRAULIC CYLINDERS).

Calweld is BIG and does a big job!

DON'T CONFUSE A CALWELD WITH SMALL AUGER-TYPE POSTHOLE DIGGERS. BUCKET DRILLS AND TOOLS ARE INTERCHANGEABLE TO DRILL INTO ALL TYPES OF SUBSOIL FORMATIONS INCLUDING ROCK.

CALWELD

Calweld Drills

CALWELD, INC. 7222 E. SLAUSON AVE., LOS ANGELES 22, CALIFORNIA

Speed your shoring with ACROW ADJUSTABLE STEEL SHORES

ACROW adjustable steel shores... set in less than one minute by one man... removed in seconds. Hair-line adjustment... allows corrections even after pouring. Patented stud collar automatically cleans threads during stripping... your ACROW SHORES are ready immediately for next use.

All steel construction gives safer shoring... Highest load-carrying capacity. Each is a self-contained unit... no loose parts can be misplaced.

Made with standard head 6"x6" or beam type head 14"x4". Flat type head fits any size stringer. Working ranges 3'4" to 16'.

And for quickest, strongest, safest slab-decking supports at lower cost... use ACROWSPAN horizontal shoring, only two basic components. Makes ideal companion for the ACROW SHORE—the world's fastest selling shore, OVER 4,000,000 IN USE.

State Div. Architecture, 1120 N St., Sacramento, Calif. CD 5/9.

What is there about sealants based on THIOKOL polysulfide polymer that makes a difference to architectural designers, engineers, specifiers, builders?

Unique properties of polysulfide sealants meet every structural sealing need in all types of building ... from monumental curtain wall to umbrella-like geodesic domes.

1. **Adhesion** makes the difference. Bonds with weld-like strength to practically all building materials. Will not flow from joints under heat, stress, or traffic.
2. **Elasticity** makes the difference. Gives with building motion. Expands, contracts as structure demands. Cushions against vibration. Absorbs shock.
3. **Longevity** makes the difference. Properly formulated and applied, sealants based on THIOKOL polysulfide polymer last for years. No frequent, costly maintenance.
4. **Custom-sealing** makes the difference. A true and lasting seal formed on the job—for each job and condition. No gasketing, cutting, splicing, vulcanizing. Tolerances in structural materials and their normal variation from specs can be compensated for immediately.
5. **Excellent resistance** to all elements makes the difference. Withstands oxidation, moisture, wind, rain, sun, temperature extremes, oil, chemicals, solvents.
6. **Application ease** makes the difference. Applied by caulking gun. Tooled and packed in joint easily. Cures in place to durable seal. No leaks. No dryout.

STURDIER CHASSIS!
STRONGER CAB!
HEFTIER SUSPENSION!
HUSKIER ENGINES!

CHEVY'S PUT TOGETHER TO STAY TOGETHER... TO CLAMP DOWN ON COSTS!

NEW STRONGER CAB CONSTRUCTION . . . to add years to the life of your truck. Tough new steel braces reinforce cab underbody, help keep cab tight and solid, provide a sturdy foundation for long cab life. Husky new box-section pillars frame door openings; keep doors in lasting alignment. New roof panel is double walled for extra strength.

NEW STURDIER CHASSIS COMPONENTS . . . steel muscled truck stamina where it counts! New *frames* provide a new box-section rail design that's stronger than ever; torsional stiffness is increased up to 480%! Massive "X" or "K" brace cross-members resist damage from frame twisting like never before. And *brakes* are bigger, for longer brake life and safer stopping. Bigger capacity *suspensions* and *axles* boost load-carrying ability.

TRUCK-BUILT V8's AND 6's . . . famous Chevy engines that know the most about saving money on fuel and maintenance. Brawny forged steel crankshafts assure extra endurance; long-lasting precision bearings minimize wear; full-flow oil filters protect moving parts from harmful dirt. These and many other truck-built engine features provide sure dependability that keeps your maintenance costs *down* for extra thousands of miles.

NEW HEFTIER SUSPENSION protects everything from wear and tear . . . and gives the ride that's revolutionized trucking. Chevy's new independent front suspension system is as *tough* as it is smooth. Rigid control arms, strong alloy steel torsion-bar springs, new low friction steering linkages are engineered to take your toughest runs with strength to spare.

Here are the strongest truck components known . . . assembled lastingly, with care and craftsmanship. It's Chevrolet's way of making sure you get maximum truck life; extra assurance of higher profits because of far fewer maintenance and repair charges.

■ When it comes to putting out a good day's work at least expense, a '60 Chevy truck knuckles under to nobody. Because, as we're showing you here, Chevrolet's building 'em *tough* these days, even tougher than ever before. And that's saying something when you consider how Chevrolet trucks have stood up over the years. Here's a typical example:

160,000 miles on a truck-busting job—and still going strong! The strength and stamina of this Chevy heavyweight has paid off handsomely for Emil Horwatich, Pewaukee, Wisconsin, gravel hauler. This tandem axle Chevy with Workmaster V8 has logged 160,000 miles in the toughest kind of service: hauling maximum loads about 2,200 miles a week, slogging over off-the-road terrain much of the time. "This baby just won't quit," Mr. Horwatich says. "She's a real money saver."

That kind of performance has been Chevy's stock-in-trade for years; and the '60's are designed to put out even more of it. Next time you're in the area, drop by your Chevrolet dealer's. Find out for yourself why more truckers than ever before are getting more work and earnings out of Chevrolet trucks. And make sure you *test drive* a '60 Chevy. You'll wonder how you've managed without one! . . . Chevrolet Division of General Motors, Detroit 2, Michigan.

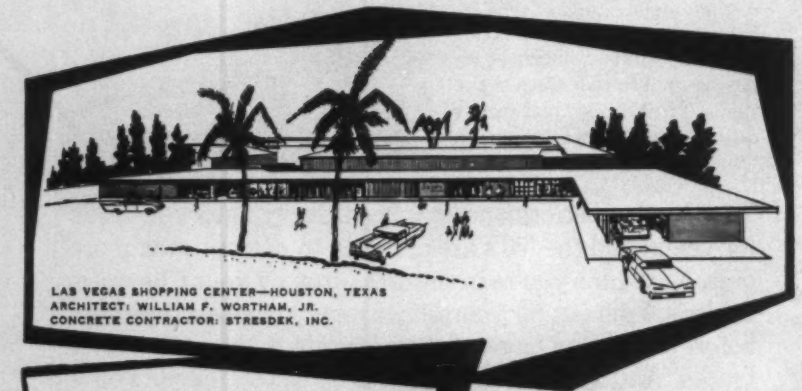
The Prescon System of Post-Tensioning Prestressed Concrete Works for You From Design and Engineering to Completion



LAS VEGAS SHOPPING CENTER—HOUSTON, TEXAS
ARCHITECT: WILLIAM F. WORTHAM, JR.
CONCRETE CONTRACTOR: STRESDEK, INC.

More design flexibility to achieve esthetic effects and meet engineering demands can more often be done with post-tensioned prestressed concrete.

The Prescon System offers the simplest and most economical method, both from design and construction standpoints. The system is adapted to either yard or job site use.

If you are not acquainted with design and construction using post-tensioned prestressed concrete and The Prescon System, contact any Prescon Representative. For technical data see Sweet's Catalog.

MEMBER PRESTRESSED CONCRETE INSTITUTE

1

Blend many operations into smooth flowing cycles with fast, two-lever "Joy-Stick" air-ease controls.

2

Work non-stop with "Shear-Ball" turntable connection. Requires no adjustment, less maintenance than other designs.

3

Set four "Power-Set"® outriggers in about a minute. Move up and reset even faster.

4

Operate faster with a square-tubular-chord boom that provides greater lifting capacities, longer reaches.

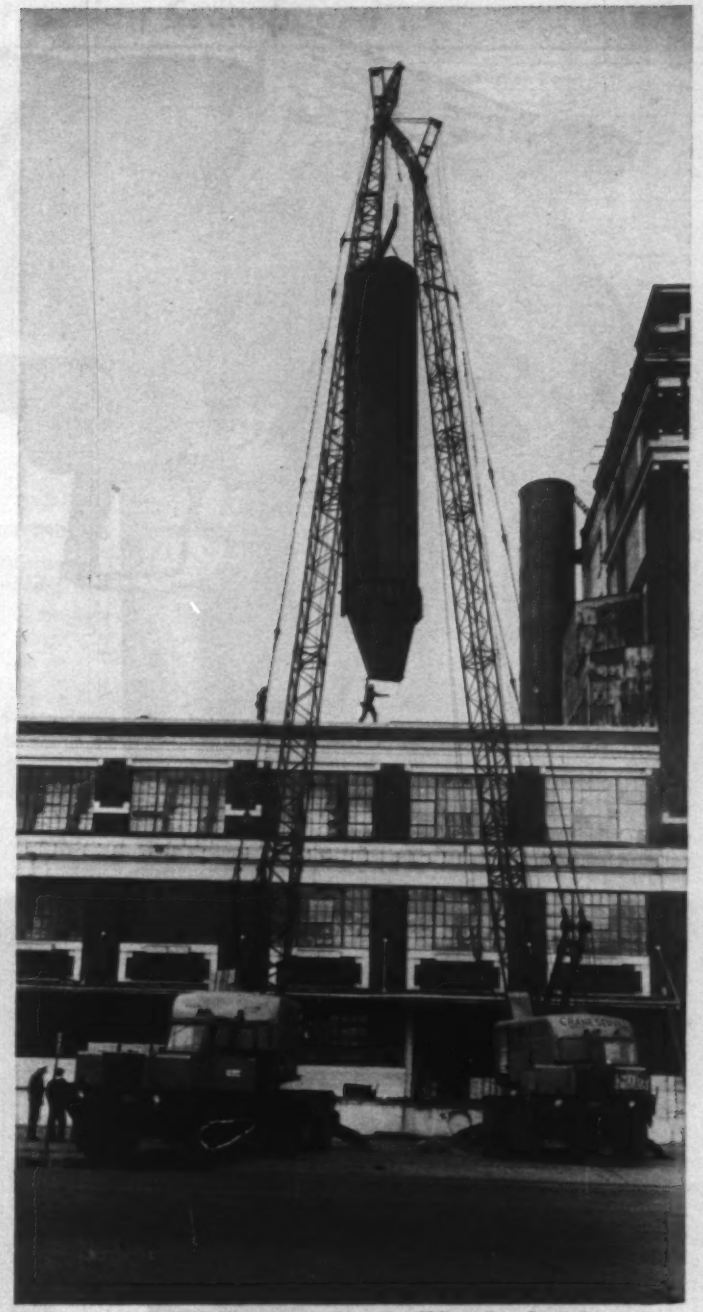
4 WAYS FASTER WITH LORAIN ON YOUR JOB

Lorains are real output boosters. They're designed to speed your operations . . . and ruggedly built to stay with your toughest jobs. Their reliability is field-proven. "Shear-Ball" connection for instance is warranted for 10 years.

Lorains convert so easily that field changes are a breeze. Beyond that, Lorains have the *operating* flexibility to pay off whether you use them as hard-digging shovels, hoes . . . fast-moving draglines, clamshells or cranes.

See your Lorain distributor.

THE THEW SHOVEL COMPANY, LORAIN, OHIO



Moto-Cranes lift 15,000-lb. flour storage bins at a 68-ft. radius. Crane Service, Inc. teams two MC-530W's to lift six 57-ft. bins to the roof of General Mills, Sperry-Division plant in Spokane. The 35-ton Moto-Cranes are equipped with 120-ft. booms and 20-ft. jibs. Both are working on "Power-Set"® outriggers.

LORAIN® ON THE MOVE

PLANTS: In Lorain, Elyria and Bucyrus, Ohio . . . **PRODUCTS:** Power shovels, cranes, draglines, clamshells, and hoes on crawlers from ⅜- to 2½-yard capacity • Cranes from 7 to 80 tons . . . on crawlers, and as rubber-tire Moto-Cranes, and Self-Propelled Cranes • Rubber tire front-end Moto-Loaders in 6000-lb. and 7000-lb. carrying capacity . . . **OUTLETS:** Lorain products sold and serviced by 249 distributor outlets throughout the world.

SPEEDY DELIVERY FROM STOCK...

In the market for lag bolts? We make a full line of sizes. Carriage and machine bolts also. And they're all top quality.

California's Golden State Freeway construction is speeded as two Lima truck cranes pour concrete on 1¼-mi. section near Los Angeles.

Strong-boom Limas dig, hoist, pour for California contractor

"In our book, Limas are fast, hard-working, well-built machines. We use them for everything—excavating, concrete pouring, and hoisting. We particularly like the strength of the boom. It seems the boom sections are heavier and better constructed than on other make cranes.

"We also feel that Limas are high-production machines—we have tested their performance against a competitive machine and it couldn't begin to measure up to the Lima's output. Because Limas are built better, they stand up longer and are easy to maintain."—*F. A. Seymour, project supt., J. C. Boespflug Construction Co., Los Angeles.*

Lima stands 100% back of both crane and carrier—no division of responsibility between manufacturers. You can be sure that Lima truck cranes are designed and built, from ground up, for power, mobility and easy travel at highway speeds, yet with strength for heavy lifting jobs under the most difficult operating conditions.

There's a Lima type and size for every job requirement—crawler cranes to 140 tons, 80 tons on rubber; shovels to 8 yd.; draglines variable. Choice of power. Prove to yourself just how good Limas are. See them at work. Talk to their owners. For facts and figures, contact your nearby Lima distributor, or write Construction Equipment Division, Baldwin-Lima-Hamilton Corporation, Lima, O.

Prices 'Soft' on Much Equipment

- **Distributors and dealers are shaving prices, boosting trade-ins, or giving better terms.**
- **Producers are holding line, but some see higher prices before the end of the year.**

Contractors are calling the price and terms tune on new construction equipment. Chances are good they will continue to do so for the rest of 1960.

Those are the key conclusions drawn from an ENR survey of 17 of the major machinery manufacturers and questioning of Associated Equipment Distributors officials.

The producers, however, are trying to ignore the calls. Almost all companies checked say they are fighting hard to keep prices at present levels. Labor costs have exerted upward pressure; only stable materials prices, economies resulting from redesign of equipment and improved manufacturing equipment have permitted the producers to maintain their present price tags.

Even so, earnings reports of many of the producers show a squeeze on profit margins, a slip in sales volume.

Offsetting these pressures for higher prices at the production level are the dealers, who are letting the manufacturers know, in no uncertain terms, that a price boost would be out of order. It is the dealer who is on the front line of pricing economics, and it is he who bears the brunt of a buyer's market.

Business of dealers "is not too good, although there are signs of improvement, which will probably hold for this year," reports an AED spokesman.

Because members of the association have large inventories, they are lowering the price of equipment to contractors either by outright shaving of prices or larger turn-in allowances on used equipment. Some are providing easier financing terms than in the recent past.

A firming of prices is not anticipated. Most distributors indicate that they will resist further attempts by buyers to lower prices, but they also concede that the contractors probably will be tougher to deal with in coming months than they have been.

The contractors will be fighting hard to get even a lower price, and failing in that will be holding out for still easier financing terms.

They should be aided in this effort by the over-all money-market condition. Now on the down side, and presently showing all signs of going still lower, contractors have the odds in their favor. No one expects to see money "dirt cheap," but there is little doubt that the cost of money will dip still further from the highs of January. Any lowering of interest rates to the distributor will be passed through to buyers to a greater or lesser extent, depending on how bad a sale is needed.

The distributor must be as competitive in his business as the contractor is in his. Dealers concede that contractors are slashing bids to the bone and are therefore intent on buying more cheaply and on longer terms. "So the distributor is forced to sell if he intends to stay in business," says the AED spokesman.

This all adds up to stable prices at worst, or still lower prices at best. And even if some manufacturers should step out with a price increase, it may not be felt immediately by the contractor; the distributor may absorb most or all of it.

Eight of the 17 producers checked expect prices to remain the same as they are now for the rest of the year, although one hedged by adding, "They could move up slightly in the next few months."

This midwestern producer of cranes and shovels says its "order situation is good, with business for the full year expected to be about 5% above 1959." This, coupled with the company's optimistic outlook for business next year, would indicate prices will be on the firm side.

But another producer of shovels concedes that it has cut prices—"not across-the-board, but on a deal-to-deal basis. Each sale is considered individually." This company says that future prices will depend on what happens to the price of steel. "This item may up by the end of 1960, and if so, we'll boost the price of our shovels."

Caterpillar Tractor Co. of Peoria reports sales are improving. "There have been no price cuts," says a spokesman. "Prices are expected to remain stable, but we're having a battle to keep them the same. We are concerned about increasing costs changing the price situation."

Only four companies said that prices are expected to go higher in the next few months. A manufacturer of pavers reports sales so far are slightly below 1959, "but we haven't cut prices, in fact, we will probably move them higher in the next few months." This company is looking for a business upturn "as a result of greater confidence in the tempo of contract lettings, road programs becoming less static, and introduction of some new products."

Officials of Gardner-Denver Co., Quincy, Ill., are also optimistic about business, but from the contractor's point of view they have some bad news about prices. A spokesman says the buyer can expect to pay more for his purchase in the next few months.

A West Coast manufacturer of asphalt plants says sales are 25% ahead of the same period last year. "There have been no changes in prices since the beginning of the year, although we feel that prices should be boosted because we have had an increase in our labor costs."

Contractor Sells Bonds To Finance Own Job

A construction company has taken on the job of selling $250 million worth of Venezuelan bonds that will provide the funds to pay for construction of 45,000 houses in that Latin American country.

The company that now wears two hats—those of bond underwriter and contractor—is Berlanti Overseas Corp., wholly owned subsidiary of Berlanti Construction Co., Inc., Harrison, N. Y.

The agreement stipulates the company can sell any amount of bonds, at any time, to any investor, anywhere, at any price. Face amount of interest is 5½%, but if sold by the company at a discount, yield to the buyer will be five points more, i.e.; $1,000 worth of bonds for $950.

Louis Berlanti, company president, says $5 million worth of bonds have already been received from Venezuela, and that "the issue is 99¾% sold to one institutional investor." The money received will provide the capital to start the job. All bonds will be guaranteed by Venezuela.

Big-Volume Engineers at Record

The number of consulting engineers who put $100,000 or more in new design work on their drawing boards in 1959 set a new record.

The total of 1,805 is 16% above 1958 and 8% above the former record set in 1956. (The dollar volume is based on the estimated construction cost of all the consultants' projects reported by ENR and its sister publication, CONSTRUCTION DAILY.)

The gains over 1956 and 1958 reflect the sharp rise last year in new proposed heavy construction—an uptrend that continues steep this year.

The number of $100,000-plus consultants was larger for every type of construction but one—private office buildings.

Most of the increase came among firms designing shopping centers and stores, mass housing, industrial building and public nonresidential building other than offices.

More consultants took on new sewerage and waste disposal engineering assignments in 1959 than they did any other type of work. The number of firms getting sewerage, waterworks and earthwork-dams-waterways was at a record.

More consultants were hired to design airports and missile bases than at any time since the rush to construct military airfields during the Korean War. And the increase last year in the number of firms with new industrial plants was just under the 1956 high—395 last year, compared with 422 in 1956.

Last year also brought an end to the two-year decline in the number of firms doing highway and bridge design. Last year 236 consultants got $100,000 or more in new highway and street design work, and 76 firms attained that volume in bridge design. The tallies in both cases, however, are well below 1956, when 264 consultants had $100,000 or more in highways and another 103 had that amount of bridge design volume.

The number of consultants in the $1-million-plus category rose by 28% to a record total of 895 firms. The number of firms with volume of $500,000 to $1 million showed a 17% increase, to 322 firms.

In the $1-million-and-more category, the number of firms doing shopping centers and stores rocketed 158% above the 1958 count to a total of 67.

The number of consulting engineers doing $1 million or more in industrial building design rose 50% to a total of 240. Those with the same volume of housing design also rose 50%, to 209.

Also up sharply was the number of million-dollar consultants taking on schools and other public nonresidential building. The school building consultants rose 37% to 172, and those doing other public nonresidential building went up 20%.

The number of consultants that got new federal projects rose 20% over 1958 to a total of 126.

Although the number of consultants in the $100,000 to $500,000 new-business bracket edged up only 2%, the total of 588 was a new high. Many firms that had been in this bracket in 1958 probably moved up in class.

In the $100,000 to $500,000 bracket, the rise in the number of consulting firms doing industrial building design offset drops in those doing most other types of building. Waterworks, sewerage and bridges were the mainstays in the other-than-building market.

Without the support provided by these groups, the smallest-volume sector would have shown a relatively sharp drop from the previous year.

Declines ranged from a high of 80% to a low of 1%. Public office building design in the $100,000 to $500,000 group dropped from five in 1958 to one in 1959. (In the $500,000 to $1-million group, the number slumped to zero. However, in the over-$1-million group, the number of consultants doing public office buildings rose 37%.)

ENR Data

You can thank Johns-Manville's patented Ring-Tite® Joint which cuts ground water infiltration to a minimum. It's exclusive on *Transite®, the white sewer pipe.*

On a recent sewer project, specifications called for an extremely exacting infiltration test. What was the outcome? At final inspection, infiltration in the Transite line was 80% *less* than specification. What does this mean? Important savings! Volume of sewage to be treated is kept to a minimum . . . treatment plant operates as designed. The plant's reserve is conserved for future service.

Transite, made of tough, durable asbestos and cement, with its tight joints, offers many other savings. The long, light-weight lengths and sure coupling methods reduce trenching and installation costs. Transite's low coefficient of friction means faster flow and shallower trenches. Preventive maintenance with Transite will save you thousands of dollars.

Take it from Hartley—Transite can provide important economies in all sewer projects. Get all the details on Transite, the white sewer pipe. Send for your facts and data book today! Write Johns-Manville, Box 14, EN-1, New York 16, N. Y. In Canada: Port Credit, Ontario.

IF EVER A BOLT CAME UP WITH THE ANSWERS— IT'S THIS ONE!

The Lamson High Strength Bearing Bolt* is solving some of the oldest, meanest and costliest problems ever presented by steel connections.

Recent highly successful applications include: steel mill buildings and cranes, railroad bridges, dragline buckets, construction machinery, radar antennas.

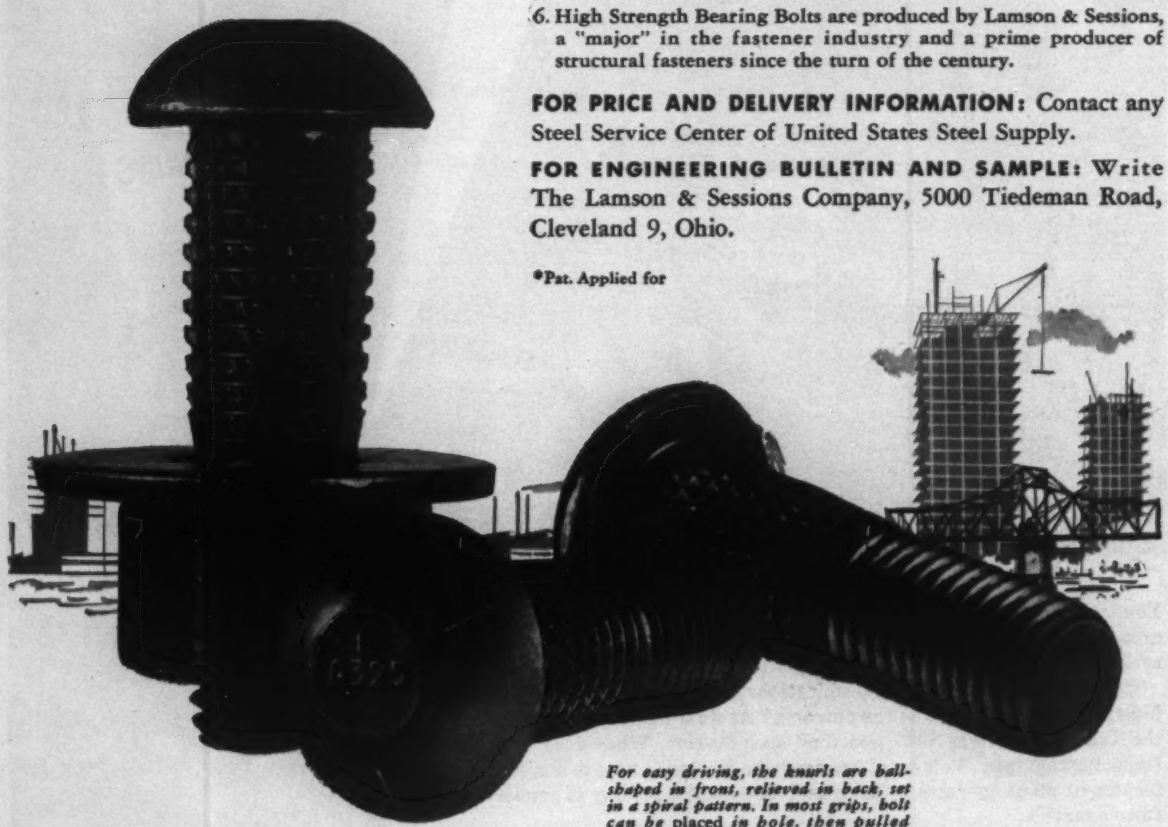
THE BASIC ADVANTAGES ARE BIG ONES:

1. High Strength Bearing Bolts combine the tensile strength of High Strength Bolts with the bearing properties of rivets.
2. High Strength Bearing Bolts have the highest shear strength and greatest resistance to slip of all structural fasteners.
3. High Strength Bearing Bolts make possible important labor savings in fabrication and erection.
4. The High Strength Bearing Bolt assembly (bolt, nut, one washer) costs no more, grip for grip, than a High Strength Bolt assembly (bolt, nut, two washers).
5. High Strength Bearing Bolts (and Lamson High Strength Bolts) are available from every Steel Service Center of U.S.S. Supply Division, United States Steel Corporation.
6. High Strength Bearing Bolts are produced by Lamson & Sessions, a "major" in the fastener industry and a prime producer of structural fasteners since the turn of the century.

FOR PRICE AND DELIVERY INFORMATION: Contact any Steel Service Center of United States Steel Supply.

FOR ENGINEERING BULLETIN AND SAMPLE: Write The Lamson & Sessions Company, 5000 Tiedeman Road, Cleveland 9, Ohio.

*Pat. Applied for



For easy driving, the knurls are ball-shaped in front, relieved in back, set in a spiral pattern. In most grips, bolt can be placed *in hole, then pulled through connection with torques well below final assembly torque. One man can install—no need to hold the head.*

Long Buffalo Strike Is Settled

- **Seven trades accept three-year, 60-cent contracts that will boost wages 20 cents each year.**
- **But New York City contractors still have trouble selling three-year, 65-cent settlement pattern.**

Negotiation of three-year labor contracts that provide for wage increases of 20 cents a year brought to an end last week a 40-day strike by six AFL-CIO building trades unions representing 20,000 construction workers in Buffalo, N. Y.

A sheet metal workers strike in San Francisco was also settled and a stoppage by San Diego painters was averted. But three trades in New York City remained on strike and were joined by a fourth one, which rejected a tentative offer that would have provided a three-year, 65-cent settlement.

The Buffalo strike marked the defeat of a collective bargaining plan developed by the Construction Industry Employers Association and the building trades unions last February. The plan, which proved too cumbersome to work embraced a progressively accelerated timetable for bargaining and had been hopefully designed to assure conclusion of negotiations well in advance of contract expirations.

Last of the major holdouts in the Buffalo strike and their pre-strike scales were: Cement masons, $3.76; carpenters, $3.93½; bricklayers, $3.91½; iron workers, $3.84; laborers, $2.93½ and plumbers, $3.77½.

The pile drivers, a 200-member local affiliated with the carpenters, was the seventh trade to settle.

Buffalo contractors had hoped to keep the settlements down to a 55-cent package and were willing to go that high to get the three-year stability of long-term contracts. But in addition to raising the ante to 60 cents, they also made a number of concessions that involved other issues.

A show-up clause in the pile drivers contract provides for three hours pay if workers stand by for four hours without being put to work.

The bricklayers won a two-hour show-up clause giving workers two hours pay when they show up and work is suspended for the day. They used to get one hour's pay. Under the new contract union members can take the show-up pay in wages or assign it to welfare or pension accounts.

Iron workers won an increase of three cents a mile in job-to-job travel pay, making it now 10 cents. They also obtained a 10-cent-an-hour hike for double time work to be paid into the welfare fund. The premium now amounts to 20 cents.

The carpenters contract gives job preference to workers with one-year residence in Erie County and calls for examination of job applicants by a joint qualification board.

A grievance clause in the carpenters contract provides for a hearing on a grievance within 24 hours. It sets up a three-step arbitration plan, beginning with on-the-job efforts of the union and contractor association to settle the dispute.

Meanwhile, the San Francisco sheet metal workers returned to work after a 10-day strike. They settled for a two-year contract that grants a wage increase of 25 cents the first year and 21½ cents the second year. Starting the second year, workers will also get two paid holidays, based on a 1% fund that equals four cents an hour.

Down in San Diego, last minute ratification of a new three-year contract by painters Local 333 forestalled a strike by 1,000 union members.

The contract calls for a 79-cent package increase spread over the three years. Old union scale was $3.54.

Elsewhere, New York City contractors reached agreement with four of the five plumbers unions in the greater New York area. But the ornamental iron workers left their jobs and joined the still-striking asbestos workers, sheet metal workers and steamfitters. And Local 2 of the plumbers, which is one of the nine trades working without contracts, is expected to take a strike vote this week.

The plumbers local unions that did settle represent 4,500 journeymen in all the Long Island and New York City areas except the Bronx and Manhattan.

The new three-year, area-wide collective bargaining agreement calls for a package increase of 73.4 cents. The first increase is for 10 cents, retroactive to July 1. Balance of the package may be taken as wages or fringe benefits but no decision had been reached last week on the distribution.

The plumbers pre-settlement scale was $4.55, plus 16% for vacation, welfare and pensions and $2.00 a day for each day worked for a "security plan" which provides payments to union members out of work because of layoffs, injury, sickness or disability.

The strike of ornamental ironworkers occurred after union rejection of a three-year, 65-cent package tentatively agreed to early in the month. Although the union reportedly took exception to a clause that would establish a joint arbitration board for the settlement of grievances, it later claimed that the size of the proposed wage increase was too small to be acceptable.

The proposed three-year, 65-cent package followed the pattern earlier established with seven trades in what is known as the New York City Concrete Alliance.

In those contracts, contractors had made some headway in standardizing holidays, computing fringe benefits on straight time pay and paying wages by check instead of cash. The three-year terms were also considered a significant step toward the stabilization of costs.

In Colorado, members of iron workers Local 24, representing 1,000 workers, settled with the Associated Building Contractors of Colorado for a two-year, 52½-cent contract that raises base pay by 50 cents.

The contract grants an immediate wage boost of 25 cents an hour and adds another 2½ cents an hour to welfare. Another wage increase of five cents an hour goes into effect next October 31, followed by 10 cents more on April 1 and a final 10 cents on October 1, 1961. Union members will then be receiving $4.01 in wages and fringe benefits.

The Colorado contractors did, however, effect some savings in travel pay. Under the new contract, union members will get a flat $3.50 a day travel pay for distances in excess of 15 miles but under 50 miles. The old provision gave workers an hour's pay.

The new travel pay clause also eliminates some confusion over weekend and holiday subsistence pay on jobs more than 50 miles distant. The new contract grants $7.00 per day actually worked, as opposed to the old $5.00 rate that included Saturdays, Sundays and holidays when the men worked over into the following week.

Group Bargaining Has Pitfalls

Employers warn there is no safety in numbers alone and urge hard work, careful planning, firm stand

Collective bargaining has become a highly technical, complicated and demanding business, filled with serious legal and economic consequences for employers who develop fatalistic attitudes or false complacency.

That warning came last week from the National Sand and Gravel Association, which reminded its members that no safety or solace can be found in the mere art of group bargaining. And changes in the law and in union aims, it said, have given particular significance to labor contract clauses relating to such problems as picket lines and boycotts, grievances and arbitration, selection of job applicants, and employer dealings with owner-drivers.

In a quarterly bargaining report sent to his industry members last week, association director Vincent Ahern said:

"The group bargaining technique is valueless simply as a token. Group bargaining itself, unaided by responsible and intelligent management, is no answer to the present requirements for the compulsion to deal with powerful and wealthy labor unions. Industry must look inward for the assessment of the main responsibility for dealing with these difficult union representatives.

"Fatalistic attitudes by our employers will lead to disastrous results. We must prepare ourselves for collective bargaining, we must work out principles in advance of the conferences, and we must be prepared, if there is no alternative, to take a strike . . . and this is said with full recognition of the fact that strikes are bad . . .

"Yet if a union believes that an employer or group of employers will under no circumstances take a strike, our ability to emerge from the collective bargaining ordeal with anything like a decent contract will be lost beyond hope."

Mr. Ahern made a number of specific observations and comments based on contracts negotiated this year by sand, gravel and ready-mixed concrete employers. Among them are these:

• A local union may "blandly ask" employers to sign a hot-cargo clause that is clearly illegal on its face. An example is teamster reservation of the right not to handle goods from an employer that has a labor dispute with the union or to make deliveries to or pickups from establishments where pickets, strikes or lockouts exist. Unless such clauses are removed from the contract, employers may face a charge of deliberate violation of federal law and may expose themselves to civil suits for damages.

• The teamsters are becoming more and more persistent in demands that employers bargain with the union for owner-drivers. This forces employers to face the question of the legality of such demands and a host of complicated tax and insurance problems that revolve around the question of whether the owner-operator is an independent contractor or an employee.

• Loosely drawn arbitration clauses may lead to the arbitration of labor disputes that should not be arbitrated. Protection against recent Supreme Court decisions that enlarge the scope of arbitration (ENR June 30, p. 59) can be found in the use of limiting language.

• There is a growing practice of requiring pre-hire physical examinations. The employer's decision based on pre-employment physicals should be made final and not subject to grievance procedure. Other criteria for the selection of applicants should also be spelled out. Included in the example given is a minimum age requirement (25), checking of all references, a driving test, and a trial-run under actual conditions.

Labor in Brief . . .

• **Shorter workweek**—A resolution calling for a shorter workweek because of automation has been submitted by California carpenters for consideration by the State Building and Construction Trades Council of California when it holds its 40th convention at Long Beach next Wednesday.

• **Vacations**—The Confederation of Swedish Trade Unions has the support of the Swedish Social Democrats in a legislative demand for four-week vacations. Workers are now entitled to three weeks' vacation.

• **Mortgage investments**—Setting the pace for trustees of other welfare funds, the trustees of the Nassau District Council of Carpenters' welfare fund have invested $150,000 in Long Island, N. Y., home mortgages insured by the Federal Housing Administration.

• **Labor reform**—An Oregon legislative interim committee on labor-management relations has been holding hearings on a proposal for a "small Landrum-Griffin" bill. Management spokesmen say they are seeking "something that would improve the climate" of labor-management relations in the state.

• **Right-to-work**—A right-to-work law for New Mexico will be sought again next year by the New Mexico Farm Bureau, according to a bureau spokesman. Such laws ban the union shop. They are now in effect in 19 states.

• **Inflationary settlements**—The management of General Electric Corp., which will soon be bargaining with over a hundred unions, says post-war "pattern bargaining" has been "too fashionable" for the good of anyone. It claims the result has been "inflationary settlements" for which a previously apathetic public will no longer foot the bill and which means loss of business for employers and loss of jobs for workers.

• **Safety by contract**—Unions in western New York State have called for the use of collective bargaining as a device for promoting safety. In a resolution adopted at a safety meeting in Buffalo, they said labor contracts should contain clauses that fix the employer's responsibility to provide safe working conditions.

• **Minimum wage**—As a result of petitions filed by the State AFL-CIO, Arkansas voters will find on their November ballots an initiated minimum wage and overtime proposal that would establish a $1 minimum wage and 40-hour workweek within two years and 60 days from the measure's approval.

• **Highway safety**—Highway contractors in Pennsylvania are now subject to new warning and safety standards for the protection of workers and motorists. The standards, contained in the Department of Highways' Bulletin 43, will supplement highway specifications and become a factor in bidding.

Construction Employment Down

The labor market has become more glutted than usual for this time of year.

Although construction employment rose by 139,000 to 2,977,000 in June, the industry's total employment was down 33,000 from a year ago. The figures exclude Alaska and Hawaii.

This was part of the high-unemployment, high-employment picture presented by the U.S. Labor Department last week.

Total unemployment in June rose to 4.4 million, well above seasonal expectations. The seasonally adjusted rate of unemployment moved up to 5.5%. The unemployment rate in the construction industry was a lot higher—8%—despite the improvement in employment.

Total employment, however, rose by 1.4 million to a new all-time record of 68.6 million.

The simultaneous increase of employment and unemployment was attributed to a large influx of school graduates into the labor force and to the economy's ability to absorb some but not all of them.

The June stateside employment figure of 2,977,000 for the construction industry was not only lower than last year's, but it was also the lowest for any June since 1955, except for the recession year of 1958.

The department's unemployment figures do not include workers on strike. But the employment figures are affected by strike activity because they are based on payroll reports.

Long-term unemployment (15 or more weeks of idleness) decreased over the month to 800,000, but an estimated 135,000 jobless workers exhausted their state unemployment insurance benefits.

Although the factory workweek rose to 40.0 hours in June, the increase was less than normal. Every major group in the durable goods sector of the economy and most of those in nondurables reported a shorter workweek than a year ago.

Weekly earnings of factory production workers rose to $91.60 and hourly earnings remained unchanged at $2.29.

Fewer Strikes in Construction

Strike idleness in the nation's industries in 1959 reached its highest level since the post-war readjustment year of 1946, according to the U.S. Labor Department.

Although the number of stoppages was about the same as in 1957 and 1958, the number of man-days of idleness tripled to nearly 69 million. This was due largely to the steel strike, which lasted 116 days, involved 519,000 workers and caused 42 million man-days of idleness.

The construction industry, however, showed a drop from 1958 in the number of strikes, workers involved and man-days idle (see table).

It had 771 strikes that involved six or more workers and lasted a day or more. These strikes accounted for one-fifth of all strikes in all industries. Four of the strikes were major ones, involving 10,000 or more workers. They occurred in Seattle and western Washington, southern Illinois, the Washington, D. C. area, and Arizona.

More than half the nation's 1959 idleness took place in the primary metal industries, and almost all of that in steel and copper.

Wages, hours and supplementary benefits were the major causes of 1959 disputes. The department says they accounted for half the strikes.

Three issues—wage increases, pensions and social insurance—caused 90% of the 1958-59 increase in idleness.

New York chalked up the largest number of strikes. Pennsylvania had the highest amount of idleness.

The strike record in and out of construction

	Number of Stoppages	Workers Involved	Man-Days Idle
In construction			
1959	771	251,000	4,120,000
1958	844	326,000	4,790,000
In all industries			
1959	3,694	2,060,000	23,900,000
1958	3,708	1,880,000	69,000,000

Bids: August 11, 1960

New York State Road Work

NOTICE TO CONTRACTORS: STATE DEPARTMENT OF PUBLIC WORKS, ALBANY, N. Y.,—Pursuant to the provisions of the Highway Law, and special provisions for projects financed with Federal Aid Funds, sealed proposals will be received until ten-thirty o'clock A.M., advanced standard time, which is nine-thirty o'clock A.M., eastern standard time, on the 11th day of August, 1960, by Henry A. Cohen, Director, Bureau of Contracts, 12th Floor, The Governor Alfred E. Smith State Office Building, Albany, N. Y., for the following projects:

County	Contract No.	Name
DISTRICT No. 10, Austin M. Sarr, District Engineer, 325 W. Main Street, Babylon, L. I., New York		
BRONX (Int. Trg. Rte. 95)	FIBETS 60-2	Interstate Route Connection 511 Brucker Expressway (Layton Ave. to New England Thruway) Section 2, Contract 2 including Throgs Neck Expressway Connection Project I-95-1(41)
Bronx (Int. Trg. Rte. 78)	FICBETS 60-3 FITNETS 60-1	Interstate Route Connection 513, Contract 4 Cross Bronx Expressway, S.H. FICBE 59-2P (Graff Avenue to Throgs Neck Blvd.) Throgs Neck Expressway, S.H. FITNE 59-1P (Layton Ave. to Longstreet Ave.) Project I-78-1(50)
Queens (Int. Trg. Rte. 78)	FICETS 60-1	Interstate Route Connection 513, Contract CE-4 Clearview Expressway, S.H. FICE 58-3, FICE 59-1, FICE 59-2, 73rd Avenue to Willets Point Boulevard and Horace Harding Expressway Connection, S.H. FIHHE 58-2 Project I-78-1(51); I-495-1(42)

Miles	Type	Deposit	Estimated Cost of Work
1.73 (5.40 Acc.)	Traffic Signs and Delineators	$7,500 Plans $5	$137,000
2.84	Traffic Signs	$5,500 Plans $5	$98,000
4.78 (11.39 Acc.)	Traffic Signs and Delineators	$16,000 Plans $5	$288,000

Any projects in this letting that are on the Federal Aid highway systems are subject to the provisions of the "Federal-Aid Highway Act of 1956", being Public Law 627, 84th Congress, approved June 29, 1956, and are also subject to the applicable New York State statutes.

In compliance with the provisions of Section 115 (Prevailing Rate of Wage), Public Law 627, the minimum wages to be paid laborers and mechanics are included in wage schedules that are set out in the bid proposal.

Maps, plans, specifications and proposal forms may be seen and obtained at the office of the State Department of Public Works, Bureau of Contracts, Albany, N. Y., and at the office of the District Engineers noted above, and may also be seen at the office of the State Department of Public Works, 270 Broadway, New York City.

If the deposit is $10.00 or more, full refund for one copy of the plans and specifications will be made to a bidder for the particular project, if such plans and specifications are returned in good condition within 30 days after the award of the contract or after the rejection of the proposal. The successful bidder is not required to return the copy of the plans and specifications in order to be entitled to such refund. If the deposit is $10.00 or more, partial refund will be made for the return of all other copies of plans and specifications in good condition within 30 days after the award of the contract or the rejection of the proposal.

Special attention of bidders is called to "Information for Bidders" in the Public Works Specifications, and to the special provisions applying to projects financed with federal funds. Award of a contract is subject to priorities and allocations under the Defense Production Act of 1950, as Amended, and all regulations issued thereunder.

Proposal for each contract must be submitted in a separate sealed envelope with the name and number of the contract plainly endorsed on the outside of the envelope. Each proposal must be accompanied by draft or certified check payable to the order of the "State of New York, Commissioner of Taxation and Finance" for the sum as specified in the advertisement and the proposal. The retention and disposal of the bidding check, the execution of the contract and bond shall conform to the provisions of the Highway Laws, as set forth in "Information for Bidders".

The right is reserved to reject any or all bids.

J. BURCH McMORRAN
SUPT. OF PUBLIC WORKS

Bids: August 8, 1960

Sewage Treatment Plant

NOTICE TO BIDDERS
CITY OF SHERRILL, NEW YORK

Sealed proposals for construction of a Sewage Treatment Plant for the City of Sherrill, New York, will be received by the Clerk of the City Commission of the City of Sherrill, New York, at his office in the City Hall until 7:30 P.M. on August 8, 1960, and then will be publicly opened and read aloud.

Separate sealed proposals will be received for the following:

Contract No. 1—"General Construction"
Contract No. 2—"Heating and Ventilating"
Contract No. 3—"Plumbing"
Contract No. 4—"Electrical"

The Sewage Treatment Plant is to be located on the south side of West Hamilton Avenue, adjacent to Oneida Creek and the existing outfall sewer. Construction of the Plant will include all treatment units, buildings, equipment, utilities, walks, drives, access roads, grading, landscaping, fencing, manholes, relocation of a portion of the outfall sewer, and everything required as set forth in the Contract Documents.

Information for Bidders, Plans and Specifications may be examined at the office of the City Clerk, City Hall, Sherrill, New York, or at the office of Stearns & Wheler, Civil and Sanitary Engineers, 99 Albany Street, Cazenovia, New York. Copies thereof may be obtained at the office of Stearns & Wheler upon deposit of $30.00 for each set (each set covers all four Contracts), to be held as security for their return pursuant to law. Any bidder, upon returning such set in good condition within fifteen (15) days after receipt of bids, will be refunded his full deposit and any non-bidder, upon so returning such set, will be refunded $15.00.

For the convenience of prospective bidders, subcontractors and material men, plans and specifications will also be placed on file at the F. W. Dodge Corp. and Syracuse Builders Exchange, 1054 James Street, Syracuse, New York.

Each proposal must be accompanied by the deposit of cash, bank draft or certified check payable to the City of Sherrill, New York, in the amount of five (5%) per cent of the total Contract price. Bid bonds are not acceptable.

Upon acceptance of his bid, if the successful bidder fails to enter into a Contract with the City of Sherrill, New York, then the monies represented by such cash, draft or certified check shall be regarded as liquidated damages and shall be forfeited and become the property of the City of Sherrill.

The City of Sherrill reserves the right to waive any informalities in or to reject all bids.

Peter G. Noto
City Clerk
City of Sherrill, New York

Dated: July 12, 1960

Bids: August 9, 1960

Delaware Memorial Bridge Repainting Steelwork

DELAWARE INTERSTATE HIGHWAY DIVISION
CONTRACT NO. 41
NOTICE TO BIDDERS

Sealed proposals for repainting steelwork on the portion of the Delaware Memorial Bridge from the east abutment to the east tower, exclusive of the tower, cables and suspenders, at Deepwater Point, New Jersey, will be received by the Delaware Interstate Highway Division at the Administration Building, Delaware Memorial Bridge, near Wilmington, Delaware, until 11:00 A.M. Eastern Daylight Saving Time, on August, 1960, at which time and place said proposals will be opened and read.

Repainting shall consist of cleaning metal surfaces, spot-priming where necessary, and applying one (1) finish coat of paint to all exposed metalwork.

The approximate weight of steelwork to be painted is 9,040 tons.

Work on this project shall begin within ten (10) days after the execution of the Contract and shall be completed on or before December 1, 1960.

Monthly payments will be made for ninety (90) per cent of the work completed each month.

Bidders must submit proposals upon forms provided by the Division.

Each proposal must be accompanied by an acceptable surety bond, certified check or cash in the amount of at least ten (10) per cent of the total amount of the proposal.

The Contract will be awarded or proposals rejected within thirty (30) days from the date of opening proposals. The right is reserved to reject any or all bids.

One set of the contract documents may be obtained from the Delaware Interstate Highway Division at the Administration Building, Delaware Memorial Bridge near Wilmington, Delaware, after July 19, 1960, upon payment of $10.00. Contract documents need not be returned and the above payment will not be refunded. Checks shall be made payable to Howard, Needles, Tammen & Bergendoff.

OFFICIAL PROPOSALS

(Continued from preceding page)

Any projects in this letting that are on the Federal Aid highway systems are subject to the provisions of the "Federal-Aid Highway Act of 1956", being Public Law 627, 84th Congress, approved June 29, 1956, and are also subject to the applicable New York State statutes.

In compliance with the provisions of Section 115 (Prevailing Rate of Wage), Public Law 627, the minimum wages to be paid laborers and mechanics are included in wage schedules that are set out in the bid proposal.

Maps, plans, specifications and proposal forms may be seen and obtained at the office of the State Department of Public Works, Bureau of Contracts, Albany, N. Y., and at the office of the District Engineers noted above, and may also be seen at the office of the State Department of Public Works, 270 Broadway, New York City.

The deposit for Plans and Proposal Forms for each contract is indicated above. A refund will be made in full to bidders for return of one set, in good condition, within 30 days of award, or rejection of bids; refund for all other sets in good condition, similar period, will be 50% of deposit.

Special attention of bidders is called to "Information for Bidders" in the Public Works Specifications, and tothe special provisions applying to projects financed with federal funds. Award of a contract is subject to priorities and allocations under the Defense Production Act of 1950, as Amended, and all regulations issued thereunder.

Proposal for each contract must be submitted in a separate sealed envelope with the name and number of the contract plainly endorsed on the outside of the envelope. Each proposal must be accompanied by draft or certified check payable to the order of the "State of New York, Commissioner of Taxation and Finance" for the sum as specified in the advertisement and the proposal. The retention and disposal of the bidding check, the execution of the contract and bond shall conform to the provisions of the Highway Laws, as set forth in "Information for Bidders".

The right is reserved to reject any or all bids.

NOTICE: PREQUALIFICATION FORMS FOR CONTRACTORS

NOTICE IS HEREBY GIVEN THAT

Starting August 1, 1960, the Bureau of Design and Construction will receive application for prequalifications from contractors who may wish to submit bids for proposed hereinafter specified contracts and related work, in connection with the Spruce Run-Round Valley reservoir project as follows:

Contract SR-1, Spruce Run Dam, dikes, spillway and appurtenant structures.

Contract RV-1, Round Valley south dam, tunnel and appurtenant structures.

Contract RV-2, Round Valley north dam, dike and appurtenant structures.

Grouting under Contract SR-1 of cavernous and jointed lime stone foundations.

Grouting under Contracts RV-1 and RV-2 of rock foundations under dams and dike.

Drilling and core boring sampling in connection with grouting operations under contracts above.

In addition, contractors who may wish to submit bids for the two following contracts, to be advertised for bids by the Department of Conservation and Economic Development, must be qualified by prequalification with the State of New Jersey Highway Department:

Contract SR-2, Bridge and culverts for Spruce Run relocated road, classes B to Z, "General Construction" or "Bridge Construction."

Contract RV-2, Round Valley relocated road, classes K to Z, "Paving" or "General Construction."

Prequalification questionnaires for a particular contract will be received up to twenty (20) days preceding the final day for the submission of bids for the contract.

Bids when advertised, will be accepted from prequalified bidders only.

THE PORT OF NEW YORK AUTHORITY
CONTRACT PN-630.004

Sealed proposals for dredging to remove unsuitable material from the site of Berths 34, 36 & 65 at Port Newark will be received at the office of the Chief Engineer of The Port of New York Authority, Room 1100, 111 Eighth Avenue, New York 11, N. Y., until 2:30 P.M., on Tuesday, August 9, 1960, at which time said proposals will be opened and read in Room 1108.

Contract documents may be seen at the Office of the Assistant Chief Engineer for Design of the Authority, Room 1115. Documents will be furnished upon deposit of $30.00 per set for not more than three sets to any one company (each set including one copy of the contract drawings). Additional sets will be furnished upon payment of $30.00 per set, which payment is not returnable. Deposits and payments shall be delivered to the Treasury Department, Room 1001, where a receipt will be issued. The receipt shall be delivered to Room 1115, where the documents will be furnished.

Those who have submitted a bid on the contract directly to the Authority will receive a refund of the deposit for each set of documents, not exceeding three, returned within forty days after the opening of proposals. Those who have not submitted a bid will receive a refund of one-half of the deposit for each set of documents, not exceeding three, returned within forty days after the opening of proposals.

THE PORT OF NEW YORK AUTHORITY
S. Sloan Colt, Chairman

New York, July 21, 1960

Bids: August 15, 1960

Electric Distribution System

Manufacturers and suppliers wishing to participate in bidding on the supply of approximately $4,500,000 worth of municipal electric distribution system materials and equipment such as wood poles, electrical conductors, insulators, transformers, watthour meters, hardware and related accessories, for delivery at the port of Khorramshahr, Iran, are requested to submit particulars as to their qualifications and complete technical information, including catalogs and specifications covering the materials they would be prepared to supply, to Khuzestan Development Service, Attn: Supply Officer, P. O. Box 14, Ahwaz, Iran. Qualification statements and supporting materials will be received up to August 15, 1960. The manufacturers and suppliers invited to bid will be selected from the firms qualified under the above procedure.

U. S. Government

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-5366) will be received at Lewiston, California, until 1 p.m., Pacific Standard Time (2 p.m. Pacific Daylight Savings Time), August 18, 1960, for furnishing labor and materials for Earthwork, structures and surfacing, relocation of Trinity County Road, Carrville to Cedar Creek, Trinity River Division, California, Central Valley Project. Location 55 miles northwest of Redding, California, in Trinity County. Principal items are 666,000 cu. yds. excavation; 1,310 cu. yds. concrete; 280,000 pounds structural steel for Trinity River Bridge; and other work. Completion time 420 days. For particulars, address Bureau of Reclamation, P. O. Box 247, Lewiston, California; or Building 53, Denver Federal Center, Denver 25, Colorado. Floyd E. Dominy, Commissioner.

DEPARTMENT OF THE INTERIOR, Bureau of Reclamation. Sealed bids (Specifications No. DC-5367) will be received at Paonia, Colorado, until 10 a.m., Mountain Standard Time, August 30, 1960, for furnishing labor and materials for Crawford Dam, Smith Fork Participating Project, Colorado River Storage Project, Colorado. Location near Crawford, Colorado, in Delta County. Principal items are 1,011,000 cu. yds. excavation; 955,000 cu. yds. embankment; 5,900 cu. yds. concrete; and other work. Completion time 800 days. For particulars, address Bureau of Reclamation, P. O. Box 360, Salt Lake City, Utah; P. O. Box 346, Paonia, Colorado; or Building 53, Denver Federal Center, Denver 25, Colorado. Floyd E. Dominy, Commissioner.

OFFICIAL PROPOSALS

Bids: August 4, 1960

Underground Gasoline & Diesel Fuel System

THE PORT OF NEW YORK AUTHORITY
NEW YORK INTERNATIONAL AIRPORT
BUILDING NO. 141
CONTRACT O & M—594

Sealed proposals for constructing an underground gasoline and diesel fuel system for Building No. 141 at New York International Airport will be received at the office of the Department of Purchase and Administrative Services of The Port of New York Authority, Room 900, 111 Eighth Avenue, New York 11, New York, until 11:00 A.M. o'clock Thursday, August 4, 1960, at which time and place said proposals will be opened and read.

Contract documents may be seen at the office of the Department of Purchase and Administrative Services, Room 900, and copies will be furnished upon deposit of $10.00 per set. Deposit must be delivered to Treasury Department, Room 1001, where a receipt will be issued. The receipt is then to be delivered to the Department of Purchase and Admintrative Services, which will furnish the contract documents. The deposit will be remitted if the documents are returned in good condition, not later than thirty days after the opening of Proposals. The deposit will be forfeited if the documents are not returned within thirty days.

YOU TOO

can use the services of the consulting firms listed on these pages. They represent a great and varied collection of specialized talents.

USE THEM TO

Supply talents and specialties not existing in your organization
Obtain authoritative outside checks on your own findings and conclusions
Provide neutral and impartial opinion when there might be a difference of opinion in your company.
Take full advantage of the progress and mistakes made by others
Ease the present—and continuing—shortage of engineers
Secure social services that would not warrant full time employment
Do a hundred and one different jobs for you

Educating Civil Engineers

IN A HOPEFUL PREDICTION on this page in ENR's June 2 issue a coming conference on civil engineering education was heralded as one that "might shape the future of the profession." The conference has come and gone; its effect on the future of the profession is yet to be determined.

Civil engineering educators representing every accredited school in the country met at the University of Michigan as planned. They spent two days hearing described and discussed the implications of a proposal to make civil engineering a five-year course of study (ENR July 7, p. 21). But they went back home to think more about it before declaring themselves for or against the general idea (ENR July 14, p. 32).

Shifting the first civil engineering degree from the fourth to the end of the fifth year of study has much to recommend it, and the leading educators and a few non-educators who proposed it deserve high praise for clear and progressive thinking on a complex and important problem. Why the conferees could not bring themselves to a decision on it at Ann Arbor is hard to say.

Many factors, no doubt, were involved. Some conferees came without having done their homework; they seemed uninformed on the theme of the conference, its background and objectives—although all such information had been available to them for weeks. Some seemed to regard the meeting as a get-together or a convention instead of a working conference to which they had been brought to contribute their thinking and to express their opinions. Some actually left before the final voting sessions.

The planning committee itself—less than completely satisfied with the results of the conference—may have unwittingly shaped the outcome. In scheduling lengthy papers and discussions on more of the detailed implications of their proposal than were significant, it cut down the available discussion time, while possibly raising more questions in the minds of the listeners than were answered. And in an apparent attempt to avoid the charge of railroading, the conference planners gave their proposal too soft a sell, left the conference to flounder at times for lack of strong direction.

There were pleas for action: "Change is inevitable . . . proposals must not lie dormant." But there were also calls for more time, further study. And the latter prevailed. However, failure to meet the immediate objective—bringing forth a specific recommendation from the conference—does not mean that the educators have wasted their time or the National Science Foundation's money. Not yet, at any rate.

The resolutions of the conference will be voted upon by mail; that was decided. Time for their consideration should be ample, but it also must be limited. The 150 or so conferees eligible to vote on the planning group's proposed guide to future CE teaching must be brought to take a position on this significant proposal as soon as possible lest it drop with a dull thud and be forgotten.

One of the speakers in Ann Arbor said it is unlikely that engineering teachers will take the initiative in curricula changes to upgrade civil engineers, that pressure must come from the profession through the American Society of Civil Engineers. Actually, this pressure was applied by ASCE in its Education Task Committee report in 1957. The educators were passed the ball, then after a substantial gain they bobbled the ball a bit in Ann Arbor. But it is still hopefully assumed they'll retain possession long enough to score.

More Research for Highways

FEW WILL ARGUE that intensified highway research is unnecessary or unwise. After all, such expenditures currently amount to no more than one-fifth of 1% of the money spent on highway construction, maintenance and operation. Measured in this way, research efforts might be regarded as woefully inadequate.

It is, therefore, to be hoped that the decision of AASHO's executive committee (ENR July 7, p. 22) to defer action on recommendations by a special committee of the Highway Research Board for a stepped-up program (ENR June 23, p. 129) means only a temporary delay.

In line with tradition, a big chunk of any additional expenditures would go for physical research—including a recommended $5 million for translating results of the AASHO road test and a whopping $10 million for soil and aggregate studies.

Important as physical research may be, however, it is in the non-physical areas that needs are the greatest, as evidenced by the wide gap between our present knowledge and real understanding of the traffic stream and its behavior; the emotional and psychological factors that influence motorists; and the real impact of highway transportation on our society.

It is gratifying that the HRB committee recognized the importance of investigations of traffic behavior, causes of accidents, driver behavior, and highway benefits to both users and non-users. Probably the only just criticism is that the committee did not go far enough; research efforts in these fields could well be three or four times the sums indicated.

Refreshingly, the committee seemed to recognize the existence of forms of transportation other than highways. This was done by the suggestion that $1 million be spent in a comprehensive study of passenger transportation in metropolitan areas.

Intensified highway research is needed. AASHO should adopt the committee's proposals, and suitable agencies, both public and private, should move promptly to implement the recommended program.

"Our profit on the Pauls Valley School job depended on POZZOLITH"

GENE HUDGENS, Owner
E. P. Hudgens Construction Company
McAlester, Oklahoma

LOW COST in thin-shell concrete construction utilizing POZZOLITH is demonstrated on the Pauls Valley School project. Over-all cost on this 53,000 square foot job was just $10.00 per square foot. This includes partial air-conditioning, heating and insulation, plus sound-proofing and equipment for the science and home economics rooms and stage.

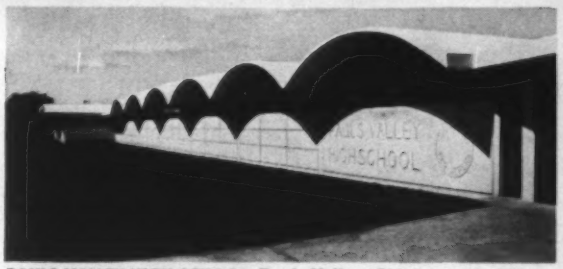
"The Pauls Valley School was a tough one to bid—because we had no criteria on which to base costs for this unique architectural concrete structure.

"At the start, our concrete test cylinders weren't giving us the 4,000 psi we needed, and we kept adding cement . . . up to 9 sacks a yard. We couldn't stand that expense so we called in Jim Sprouse—the local Master Builders field man—to look into POZZOLITH. That was the turning point on the job. POZZOLITH concrete gave us exceptional plasticity with the low slump we needed. Our test cylinders came right up to strength with only 5.8 sacks of cement.

"With our Oklahoma winds—concrete sets up almost while you look at it. POZZOLITH Retarder delayed the set up to 3 hours giving us greater flexibility in handling, placing and finishing . . . letting us do a better job with half the finishers. That was *another* important saving.

"Though I've known of POZZOLITH for a long time, I had to *work* with it to really see its value. Thanks to Jim Sprouse and his company's product we got a fair profit on this job."

For lowest cost-in-place—superior quality concrete—there's no equal to POZZOLITH. Call in the local Master Builders field man to demonstrate how POZZOLITH can help put you ahead on your current job.



PAULS VALLEY HIGH SCHOOL, Pauls Valley, Oklahoma. Architects and Engineers: Jack L. Scott and Associates, Oklahoma City, Oklahoma • Owners: Pauls Valley Board of Education • General Contractor: E. P. Hudgens Construction Company, McAlester, Oklahoma.

*POZZOLITH *is a registered trademark of The Master Builders Co. for its concrete admixture to reduce water and control rate of hardening and entrainment of air.*

Illinois Route 125, five miles west of Springfield. Texaco Asphalt pavement laid by P. H. Broughton and Sons.

Illinois Route 88 near Walnut. Paved with Texaco Asphalt by J. P. Hollerich Company. Note asphalt center island.

Illinois traffic flows smoothly over resilient, joint-free Asphalt

Here are three segments of the Illinois State highway system totaling 24 miles, which have the same type of pavement. Traffic on all three is served by hot-mix Texaco Asphaltic Concrete.

On these Illinois highways, as on the Massachusetts and Connecticut Turnpikes and Virginia's Richmond-Petersburg toll road, this resilient, rugged pavement demonstrates its ability to stand up under punishing impact with a minimum of maintenance. Thanks to its resilence and freedom from expansion joints, motorists enjoy its velvet smooth riding quality. Danger of accidents is reduced by the skid-resistant texture of hot-mix Texaco Asphaltic Concrete and by the sharp visibility of traffic lines on its dark, glare-free surface.

In addition to its other important advantages, hot-mix Texaco Asphaltic Concrete is speedily laid and requires no time consuming curing period. It is the ideal heavy-duty pavement for highways, streets and airports, particularly for the Interstate Highway System.

If you have a paving problem, our 55 years of Asphalt experience is at your service. Write our nearest office if you would like to discuss your problem with one of our field representatives. Mail the coupon below for helpful Asphalt paving literature.
